BIT Mesra, Ranchi, Jharkhand – 835215

7th–11th (5-Days)
December 2026

About the Workshop

The drug discovery pipeline is a cross-disciplinary area that includes structure, simulation, modeling, chemistry, pharmacy, biology, compliance, etc., to support lead-to-clinical candidate development. This multidisciplinary approach strengthens IP protection and supports industry-standard product development for successful clinical translational research. Scholars and faculty members from a single discipline may need additional understanding of the finer, key aspects of drug discovery, which can limit their success in drug discovery research. To build prerequisite knowledge and bridge this gap, this workshop aims to bring a foundation through mentors from academia and industry on interrelated subjects to help researchers execute their drug discovery research effectively.
