## BIRLA INSTITUTE OF TECHNOLOGY, MESRA, RANCHI

(END SEMESTER EXAMINATION)
CLASS: B. TECH
SEMESTER: V
BRANCH: BIOENGINEERING \& BIOTECHNOLOGY
SESSION : MO/2022
SUBJECT: BE303 MASS TRANSFER OPERATION
TIME: $\quad 3: 00$ Hours
FULL MARKS: 50

## INSTRUCTIONS:

1. The question paper contains 5 questions each of 10 marks and total 50 marks.
2. Attempt all questions.
3. The missing data, if any, may be assumed suitably.
4. Before attempting the question paper, be sure that you have got the correct question paper.
5. Tables/Data hand book/Graph paper etc. to be supplied to the candidates in the examination hall.

#### Abstract

Q.1(a) Define Fick's $1^{\text {st }}$ law of diffusion with mathematical notations. (b) In an oxygen-nitrogen gas mixture at $1 \mathrm{~atm}\left(1.013 \times 10^{5} \mathrm{~kg} / \mathrm{m} . \mathrm{s}^{2}\right), 25{ }^{\circ} \mathrm{C}$, the concentration of two plates 0.2 cm apart are $10 \%$ and $20 \%$ (by volume) respectively. If the diffusivity of oxygen in nitrogen is $0.215 \mathrm{~cm}^{2} / \mathrm{s}$, and $\mathrm{R}=8314 \mathrm{~kg} . \mathrm{m}^{2} / \mathrm{s}^{2} . \mathrm{K}$.mole; Calculate the flux of oxygen when i. Nitrogen is non-diffusing ii. There is equimolar counter diffusion

Q. 2 A distillation column is used to separate methanol from water. The feed is a mixture that containing 40 mole \% methanol. The overhead product is 97 mole \% methanol and bottom one was 0.5 mole \%. Consider, saturated liquid feed is provided, relative volatility is 3.32 , and reflux ratio is 3.5 . Calculate, number of theoretical plates, minimum number of plates, and feed plate location.
Q.3(a) Calculate the fraction extracted in a LLE, if $\mathrm{E}=2$.
(b) A clarified fermentation beer (H) containing $260 \mathrm{mg} / \mathrm{L}$ of antibiotic is to be extracted using butyl acetate (L). $\mathrm{K}=57$. We plan to use $\mathrm{H}=450 \mathrm{~L} / \mathrm{h}$ and $\mathrm{L}=37 \mathrm{~L} / \mathrm{h}$ to recover $99 \%$ antibiotics. How many stages are required for this separation?
Q. 460 ton/day of oil-sand ( $25 \%$ oil, $75 \%$ sand) is to be leached with 40 ton/day naptha in a counter current extractor. The final extract contains $40 \%$ oil and $60 \%$ naptha. The underflow from each unit contains $35 \%$ solvent and $65 \%$ sand. If the overall efficiency is $80 \%$, graphically determine how many extractors will be required?
Q.5(a) Write the advantage of using carbon-di-oxide as supercritical fluid.
(b) Write a short note on aqueous two phase extraction.
(c) Draw a labeled diagram of a continuous distillation column with reflux.
