BIRLA INSTITUTE OF TECHNOLOGY, MESRA, RANCHI (END SEMESTER EXAMINATION MO2022)

CLASS: MBA SEMESTER: I BRANCH: MBA SESSION: MO2022

SUBJECT: MT421 DATA ANALYSIS AND DECISION TOOLS

TIME: 03 Hours FULL MARKS: 50

INSTRUCTIONS:

- 1. The question paper contains 5 questions each of 10 marks and total 50 marks.
- 2. Attempt all questions.
- 3. The missing data, if any, may be assumed suitably.
- 4. Tables/Data handbook/Graph paper etc., if applicable, will be supplied to the candidates

Q.1(a) Describe the Postulates of probability.

[4] [2+2+2]

Q.1(b) There are 90 applicants for a job. Some of the applicants are college graduates and some are not; some of them have at least three years' experience and some have not, with the exact breakdown being

	College graduates	Non-College graduates		
At least three years' experience	18	9		
No experience	36	27		

If the order in which the applicants are interviewed by the interview board is random. The first applicant appearing for the interview has No experience. What is the probability that the applicant (i) doesn't have a graduate degree? (ii) have a graduate degree? (iii) If the chance of selection is equally likely then what is the probability that the candidate selected is graduate but has no experience?

Q.2(a) What is Law of Total Probability? Describe and discuss.

[2+2]

If events A, B, and C are independent, show that

- (a) A and B∩C are independent.
- (b) A and $B \cup C$ are independent.

Q.2(b) The density function of the random variable X is given by

[3+3]

g(x) = 6x(1-x) for 0 < x < 1

= 0 elsewhere

Find (i)P(X < 4) and (ii) P(X > 1/2).

Q.3(a) What is Time Series Analysis? Explain the components of Time Series.

[4]

Q.3(b) The following data relate to advertisement expenditure and sales:

[3+3]

-	1 (1 ()	1	,	00 -		1 (**) (1		٠.,
	Sales (Rs. Crore):	10 11	13	15	16	19	14	
	Adv. Exp. (Rs. Lakhs)	60 62	65	70	73	75	71	

Estimate (i) the sales for advertisement expenditure of Rs. 80 lakhs and (ii) the advertisement for a sales target of Rs. 25 crores.

Q.4(a) What are Non-Random Sampling methods? Discuss.

[4] [3+3]

- Q.4(b) Two electric tube lights of manufacturer A have mean lifetime of 1400 hours with a standard deviation of 200 hours, while those of manufactures B have a mean lifetime of 1200 hours with a standard deviation of 100 hours. If random sample of 125 tubes of each manufactures are tested, what is the probability that the manufactures A tubes will have a mean lifetime which is at least (i) 160 hours more than the, manufactures B tubes and (ii) 250 hours more than the manufacturer B tubes?
- Q.5(a) What do you understand by one Tailed Test and Two Tailed test?

[4]

Q.5(b) A manufacture of TV sets was trying to find out what variables influenced the purchase of a TV set. Level of income was suggested as possible variable influencing the purchase of TV set. A Sample of 500 households was selected and the information obtained is classified as shown below:

	Have TV set	Do not have TV Set
Low-income group	0	250
Middle income group	50	100
High income group	80	20

Use Chi Square Test to find evidence from the above data of a relation between ownership of TV sets and level of income?
