|   |  |                        |
|---|--|------------------------|
|   | Course Outcome: CO1, CO2   | Teaching Hours: 6 hrs  |
| 2 | <p><b>Slope and Deflection Analysis</b></p> <p>2.1 Need for Slope and Deflection Analysis: Importance of determining beam slope and deflection in design.</p> <p>2.2 Basic Beam Deflection Theory: Relation among bending moment, slope, deflection, and radius of curvature (no derivation).</p> <p>2.3 Moment Area Theorems: Determination of slopes and deflections using moment area theorems</p> <p>2.4 Double Integration Method: Determination of slope and deflection using double integration method.</p> <p>2.5 Applications to Standard Beams: Application of the moment area theorem and double integration method to cantilever and simply supported beams under point load and UDL.</p>  | Teaching Hours: 10 hrs |
| 3 | <p><b>Analysis of Fixed and Continuous Beam</b></p> <p>3.1 Fixed Beams: Concept of fixed beams and determination of fixing moments by the moment area theorem. SF and BM diagrams with supports at the same level under point load and UDL using the moment area theorem.</p> <p>3.2 Deflection of Fixed Beam: Slope and deflection at selected points using the moment area theorem.</p> <p>3.3 Continuous Beams: Introduction, Clapeyron's theorem of three moments (no derivation),</p> <p>3.4 Analysis of Continuous Beams: Application of Clapeyron's theorem of three moments for continuous beams of two spans with simply supported and fixed ends. SF and BM diagram for such cases.</p>  | Teaching Hours: 10 hrs |
| 4 | <p><b>Moment Distribution Method</b></p> <p>4.1 Introduction to Moment Distribution: Concept and need of iterative analysis method.</p> <p>4.2 Basic Parameters: Stiffness factor, carry-over factor, and distribution factor.</p> <p>4.3 Sign Convention and Procedure: Standard conventions and stepwise moment balancing process.</p> <p>4.4 Continuous Beam Analysis: Application of moment distribution method to continuous beams up to three spans with supports at the same level and constant moment of inertia, subjected to concentrated loads and UDL.</p> <p>4.5 Portal Frame Analysis: Application of moment distribution method to analysis of single storey single bay symmetrical portal frame without side sway, SF and BM diagrams.</p> | Teaching Hours: 8 hrs  |

**COURSE OBJECTIVES:** This course enables the students to

|    |  |
|----|--|
| 1. | Recall and explain the foundational geological processes, rock classifications, and structural components of the Earth-system.   |
| 2. | Analyze and classify physical phase relationships, index properties, and engineering behaviors of diverse soil profiles.   |
| 3. | Apply Principles of effective stress, permeability, and fluid-flow mechanics to evaluate subsurface hydraulic stability and seepage behavior.                                    |
| 4. | Evaluate and Simulate soil densification through compaction and consolidation, and determine baseline shear strength parameters.   |
| 5. | Formulate and compute lateral earth pressures, slope stability factors, and bearing capacities for shallow and deep foundations.   |
| 6. | Design and propose standard site exploration programs alongside sustainable, eco-friendly soil stabilization and ground improvement blueprints using industrial waste materials. |

**COURSE OUTCOMES:** After the completion of this course, students will be able to:

|     |  |
|-----|--|
| CO1 | Solve well-defined technical engineering problems related to soil phase configurations, mineral properties, and hydraulic permeability under varying groundwater conditions.   |
| CO2 | Analyze the mechanical response of soils under structural stress by determining effective stress profiles, shear strength characteristics, and compaction behaviour.           |
| CO3 | Evaluate settlement timelines, lateral earth pressures, and structural slope stability factors using standard codal and analytical methodologies.                              |
| CO4 | Determine the ultimate and allowable bearing capacity of shallow and deep foundations based on subsurface field exploration data and laboratory parameters.                    |
| CO5 | Formulate integrated site investigation operations and synthesize eco-friendly soil stabilization programs using locally available industrial waste and sustainable materials. |

BIRLA INSTITUTE OF TECHNOLOGY MESRA – 835215 (RANCHI)  
DEPARTMENT OF CIVIL ENGINEERING**

**COURSE CONTENT DETAILS:**

| MODULE | TOPICS/SUBTOPICS  |
|--------|---|
| 1      | <p><b>Elements of Engineering Geology and Soil Genesis</b></p> <p>1.1 Earth System &amp; Fundamentals: Shape, size, and interior of the solid earth; Rock cycles and rock-water interaction.</p> <p>1.2 Rocks &amp; Indian Geology: Genetic classification and engineering uses of Igneous, Sedimentary, and Metamorphic rocks. Overview of major rock types and mineral wealth of India.</p> <p>1.3 Soil Genesis and Clay Minerals: Weathering processes; Soil formation and classification. Identification and engineering properties of regional and special soils, Introduction to Clay Minerals: Basic Structural Units, Inter-particle Bonds, Structure of Water Molecules and their Interaction, basics of common clay minerals,</p> <p>Course Outcome: CO1, CO5 <span style="float: right;">Teaching Hours: 5hrs</span></p> |
| 2      | <p><b>Nature and Phase Relationships of Soil</b></p> <p>2.1 Soil Formation: Soil types and the effects of soil structure on basic properties.</p> <p>2.2 Phase Relationships: Three-phase diagram (solids, water, air); Definitions of physical properties and functional relationships. Laboratory and field determination of physical properties.</p> <p>2.3 Index Properties of Soil: Grain size distribution (Sieve and Hydrometer analysis); Atterberg limits and consistency indices.</p> <p>2.4 Soil Classification: Field identification of soils. Principles of soil classification; Comparison of AASHTO, Unified (USCS), and Indian Standard (IS) systems; Plasticity charts.</p> <p>Course Outcome: CO1, CO2 <span style="float: right;">Teaching Hours: 6 hrs</span></p>   |
| 3      | <p><b>Effective Stress, Permeability, and Seepage</b></p> <p>3.1 Effective Stress Theory: Principle and physical meaning; Total and effective stress diagrams; Quick sand condition and capillarity.</p> <p>3.2 Groundwater: Occurrence of groundwater, water table definition. Types of Aquifers, storage and yield.</p> <p>3.3 Permeability: Darcy's Law; Seepage velocities; Laboratory and field determination of coefficient of permeability.</p> <p>3.4 Seepage Analysis: Concepts of flow lines and equipotential lines.</p> <p>Course Outcome: CO1, CO2 <span style="float: right;">Teaching Hours: 6 hrs</span></p>  |
| 4      | <p><b>Compaction and Consolidation</b></p> <p>4.1 Compaction: Basic phenomenon and difference between Compaction and Consolidation, Laboratory Proctor Tests, factors affecting compaction; Field compaction.</p> <p>4.2 Consolidation: Define consolidation of soil. Describe Terzaghi's soil-spring analogy model to explain the process of consolidation and different stages of consolidation</p>   |

*Praveen Kumar, Rajat Sanyal, Saurabh Das*

**UNIVERSITY POLYTECHNIC  
BIRLA INSTITUTE OF TECHNOLOGY MESRA – 835215 (RANCHI)  
DEPARTMENT OF CIVIL ENGINEERING**

|   |  |                               |                        |
|---|--|-------------------------------|------------------------|
|   | <p>(Initial, primary and secondary consolidation). Laboratory consolidation test. Components for settlement computation.</p> <p>4.3 Shear Strength: Concept of shear strength, cohesion, and internal friction. Mohr-Coulomb failure theory, Measurement of shear strength, Unconfined strength test; Direct shear tests; Vane shear test and Triaxial tests.</p> <p>4.4 Earth Pressure: Concept of Earth Pressure, active earth pressure, passive earth pressure, earth pressure at rest, and coefficients of earth pressure.</p> <p>4.5 Stability of Slopes: Types of Slopes, Failure Modes, Forces at Play, Factor of Safety, Stability of Infinite Slopes.</p>   | Course Outcome: CO2, CO3, CO5 | Teaching Hours: 12 hrs |
| 5 | <p><b>Site Investigation and Foundation</b></p> <p>5.1 Foundation: Define foundation, Different types of foundation - Shallow and Deep foundation (Types and selection criterion).</p> <p>5.2 Bearing Capacity of Shallow Foundation: Define terms- bearing capacity, ultimate bearing capacity, safe bearing capacity and allowable bearing pressure. Terzaghi's analysis and assumptions, the effect of the water table on bearing capacity. Field determination of bearing capacity: - Plate load test, standard penetration test.</p> <p>5.3 Pile Foundation: Function of Piles, classification of piles, field installation of piles, load carrying capacity of piles (Static analysis)</p> <p>5.4 Soil exploration: Objectives of site investigation. Discuss the different stages of site investigation. Criteria for deciding the depth, location and number of test pits or bore holes. Discuss the different methods of soil exploration - Open excavation methods, different types of boring (Auger boring, wash boring, rotary drilling, percussion drilling, core drilling) and geo-physical methods. Definition, necessity and brief introduction to the methods and mechanisms of soil stabilization.</p> | Course Outcome: CO3, CO4, CO5 | Teaching Hours: 11 hrs |

**COURSE OBJECTIVES:** This course enables the students:

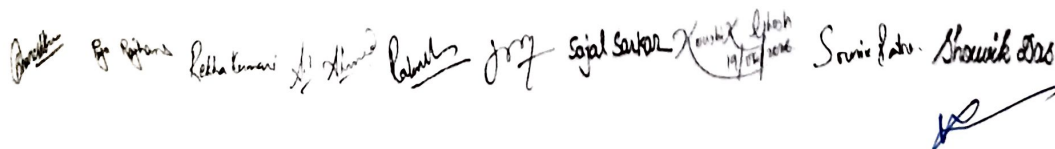

|    |   |
|----|---|
| 1. | To explain the properties and characteristics of cement, aggregates, and water used in concrete.        |
| 2. | To analyze the behaviour of fresh and hardened concrete under different conditions.                     |
| 3. | To design concrete mixes based on standard procedures and specifications.                               |
| 4. | To apply concreting operations, quality control measures, and testing methods in concrete construction. |
| 5. | To assess the role of admixtures, special concretes, and concreting under extreme weather conditions.   |

**COURSE OUTCOMES:** After the completion of this course, students will be able to:

|     |  |
|-----|--|
| CO1 | Explain the properties, types, and tests of cement, aggregates, and water used in concrete.                                    |
| CO2 | Analyze the properties of fresh and hardened concrete, including workability, strength, shrinkage, creep, and durability.      |
| CO3 | Design concrete mixes using standard methods such as IS 10262 and evaluate their performance.                                  |
| CO4 | Apply knowledge of concreting operations, curing, formwork, and quality control techniques, including non-destructive testing. |
| CO5 | Assess the role of admixtures, special concretes, and environmental conditions in concrete performance.                        |

**COURSE CONTENT DETAILS:**

| MODULE | TOPICS/SUBTOPICS   |
|--------|--|
| 1      | <p><b>Cement, Aggregate and Water</b></p> <p>1.1 Cement: Types and Properties: Introduction, OPC and PPC, grades of OPC, physical and chemical properties.</p> <p>1.2 Tests and Storage of Cement: Field tests, fineness, consistency, setting time, soundness, strength, and storage of cement and its effects on its properties.</p> <p>1.3 Special Types of Cement: BIS specifications and applications of rapid hardening, low heat, sulphate resisting, slag, high alumina, and white cement.</p> |

**UNIVERSITY POLYTECHNIC  
BIRLA INSTITUTE OF TECHNOLOGY MESRA – 835215 (RANCHI)  
DEPARTMENT OF CIVIL ENGINEERING**

|   |  |
|---|--|
|   | <p>1.4 Aggregates and Fine Aggregates: Requirements and classification of aggregates; Fine aggregates: properties, specific gravity, bulk density, water absorption, bulking, sieve analysis, grading, deleterious materials, and emerging trends in fine aggregates.</p> <p>1.5 Coarse Aggregate and Water: Properties, specific gravity, bulk density, flakiness index, elongation index, crushing, impact, abrasion, water absorption, soundness, sieve analysis, grading, and storage. Quality of mixing water, impurities, and permissible limits as per IS 456:2000.</p> <p>Course Outcome: CO1 <span style="float: right;">Teaching Hours: 8 hrs</span></p>   |
| 2 | <p><b>Concrete and Its Properties</b></p> <p>2.1 Grades of Concrete and Water-Cement Ratio: Concrete grades as per IS 456, significance of water-cement ratio, and Abram's law, selection of w/c Ratio for different grades, maximum w/c ratio for different grades of concrete for different exposure conditions as per IS 456.</p> <p>2.2 Fresh Concrete Properties: Factors affecting workability and methods of testing using the slump cone, compaction factor, and Vee-Bee test, Workability Requirement for different types of Concrete Works.</p> <p>2.3 Defects in Fresh Concrete: Segregation, bleeding, honeycombing, and preventive measures.</p> <p>2.4 Hardened Concrete Properties: Compressive, split tensile, bond strength, modulus of rupture, modulus of elasticity, and Poisson's ratio; Factors affecting strength.</p> <p>2.5 Shrinkage, Creep and Durability: Shrinkage, creep, and durability of concrete.</p> <p>Course Outcome: CO1, CO2 <span style="float: right;">Teaching Hours: 8 hrs</span></p> |
| 3 | <p><b>Concrete Mix Design</b></p> <p>3.1 Concept of Mix Design: Need and objectives of concrete mix proportioning.</p> <p>3.2 Factors Affecting Mix Proportions: Factors to be considered while specifying a concrete mix.</p> <p>3.3 Methods of Mix Design: Overview of standard methods with emphasis on the IS method.</p> <p>3.4 Mix Design as per IS 10262:2019: Stepwise procedure for proportioning concrete mix.</p> <p>3.5 Sampling and Acceptance Criteria: Sampling of fresh concrete and acceptance criteria for strength.</p> <p>Course Outcome: CO1, CO2, CO3 <span style="float: right;">Teaching Hours: 8 hrs</span></p>   |
| 4 | <p><b>Manufacture and Quality Control of Concrete</b></p> <p>4.1 Concreting Operations: Batching, mixing, transportation, placing, compaction, and finishing of concrete.</p> <p>4.2 Curing of Concrete: Importance, methods, and duration of curing.</p> <p>4.3 Formwork for Concrete: Types of formworks for beams, slabs, and columns with desirable requirements. Stripping time of formwork as per IS 456 provisions.</p>   |

**PREREQUISITE:** DCV 305 Building Materials

**COURSE OBJECTIVE:** This paper, Building Construction, enables the students to

|   |  |
|---|--|
| 1 | Explain the components, classification, and functional requirements of buildings used in construction.                         |
| 2 | Describe substructure construction practices, including foundations, earthwork, and dewatering methods.                        |
| 3 | Identify different types of masonry, scaffolding, formwork, and superstructure construction techniques used in building works. |
| 4 | Analyze the principles of building communication systems such as staircases, ramps, lifts, doors, windows, and ventilation.    |
| 5 | Select suitable materials and construction methods for building finishes, flooring, roofing, plastering, and painting works.   |

**COURSE OUTCOME:** After the completion of this course, students will be able to

|     |  |
|-----|--|
| CO1 | Classify and explain the various components of buildings and different types of construction systems used in civil engineering works.                  |
| CO2 | Analyze site conditions and select suitable foundation systems and substructure construction methods for building works.                               |
| CO3 | Compare and select appropriate masonry systems, scaffolding, and formwork techniques based on construction requirements and durability considerations. |
| CO4 | Explain and choose suitable building communication and ventilation systems, ensuring accessibility, functionality, and safety.                         |

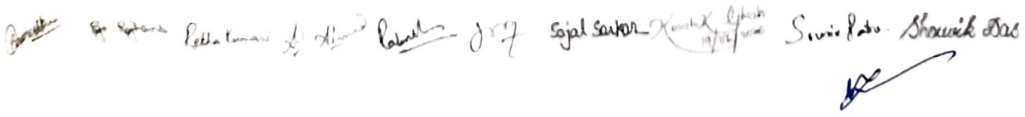

**UNIVERSITY POLYTECHNIC  
BIRLA INSTITUTE OF TECHNOLOGY MESRA – 835215 (RANCHI)  
DEPARTMENT OF CIVIL ENGINEERING**

|     |   |
|-----|---|
| CO5 | Select appropriate materials and construction techniques for flooring, roofing, plastering, painting, and other finishing works in buildings. |
|-----|---|

**COURSE CONTENT DETAILS:**

| MODULE | TOPICS/SUBTOPICS  |
|--------|---|
| 1      | <p><b>Overview of Building Components</b></p> <p>1.1 Classification of buildings as per NBC (Groups A to I)<br/>           1.2 Classification based on type of construction: load-bearing, framed, and composite structures<br/>           1.3 Substructure components: foundation and plinth<br/>           1.4 Superstructure components: walls, partitions, cavity walls, sill, lintel<br/>           1.5 Other components: doors, windows, floors, mezzanine floor, roof, columns, beams, parapet</p> <p>Course Outcome: CO1, CO2, CO4 <span style="float: right;">Teaching hours:7 hrs</span></p>  |
| 2      | <p><b>Construction of Substructure</b></p> <p>2.1 Job layout: site clearance and layout using center line and face line methods<br/>           2.2 Earthwork: excavation, timbering and strutting, embankments<br/>           2.3 Materials for plinth filling; tools and equipment used in earthwork<br/>           2.4 Foundations: functions and types (shallow foundations: stepped, wall, column, isolated, combined, raft, grillage)<br/>           2.5 Deep foundations (pile, well, caisson) and dewatering methods (pumping, deep wells, well points, cofferdams – introduction)</p> <p>Course Outcome: CO1, CO2, CO3 <span style="float: right;">Teaching hours:9 hrs</span></p>    |
| 3      | <p><b>Construction of Superstructure</b></p> <p>3.1 Stone masonry: terminology, types (rubble, ashlar), joints, selection, precautions<br/>           3.2 Brick masonry: terminology, types of bonds (header, stretcher, English, Flemish), requirements<br/>           3.3 Brick masonry practices: junctions, precautions, comparison with stone masonry, tools and equipment<br/>           3.4 Introduction to hollow concrete block masonry and composite masonry<br/>           3.5 Scaffolding, shoring, underpinning, and formwork: purpose, types, materials, erection, and removal</p> <p>Course Outcome: CO2, CO3, CO5 <span style="float: right;">Teaching hours:9 hrs</span></p> |
| 4      | <p><b>Building Communication and Ventilation</b></p> <p>4.1 Doors: components, types, standard sizes (BIS)<br/>           4.2 Windows: components, types, skylights, standard sizes (BIS)<br/>           4.3 Ventilators, fixtures and fastenings; materials and functions of sill, lintel, chajja</p>  |

**UNIVERSITY POLYTECHNIC  
BIRLA INSTITUTE OF TECHNOLOGY MESRA – 835215 (RANCHI)  
DEPARTMENT OF CIVIL ENGINEERING**

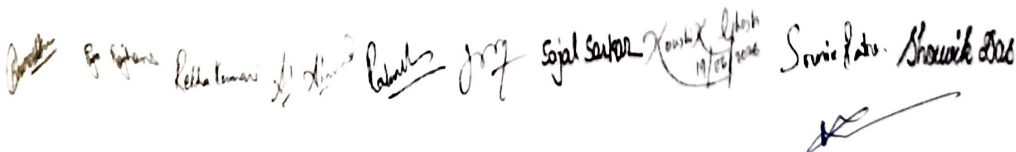

|   |  |
|---|--|
|   | <p>4.4 Vertical communication: staircases, ramps, lifts, elevators, escalators; staircase terminology</p> <p>4.5 Types of staircases based on shape and materials</p> <p>Course Outcome: CO1, CO4, CO5</p> <p style="text-align: right;">Teaching hours:7 hrs</p>  |
| 5 | <p><b>Building Finishes</b></p> <p>5.1 Floor finishes: types (Kota, marble, granite, tiles, concrete, wooden) and suitability</p> <p>5.2 Skirting, dado, laying, finishing, and polishing of floors</p> <p>5.3 Roofing materials and types: RCC, tiles, sheets; flat and pitched roofs (king post, queen post truss)</p> <p>5.4 Plastering: necessity, methods, finishes (POP, stucco, sponge, pebble), defects, and precautions</p> <p>5.5 Pointing and painting: necessity, types, surface preparation, and methods</p> <p>Course Outcome: CO3, CO4, CO5</p> <p style="text-align: right;">Teaching hours:8hrs</p> |

**PREREQUISITE:** DBS103 Applied Physics-I, DBS105 Mathematics-I, DBS 201 Applied Physics-II, DBS 203 Mathematics-II, DCV307 Basic Surveying.

**COURSE OBJECTIVES:** This course enables the students to;

|    |   |
|----|---|
| 1. | Define the fundamental principles of geodetic surveying and identify celestial coordinate systems.                  |
| 2. | Explain the distribution of accidental errors and the principles of UAV (Drone) photogrammetry.                     |
| 3. | Use the Principle of Least Squares for survey adjustments and calculate position coordinates using GPS data.        |
| 4. | Examine the intervisibility of stations and analyze the effects of the Earth's curvature on field observations.     |
| 5. | Assess the accuracy of drone-generated orthomosaics and Digital Elevation Models (DEM) using Ground Control Points. |
| 6. | Formulate comprehensive survey plans integrating a GIS framework for urban infrastructure and disaster management.  |

**COURSE OUTCOMES:** After the completion of this course, students will be able to;

|     |   |
|-----|---|
| CO1 | Interpret geodetic survey frameworks and apply triangulation principles to establish high-precision horizontal control networks.                          |
| CO2 | Apply the theory of errors, weightage analysis, and the Principle of Least Squares to compute the most probable values in survey networks.                |
| CO3 | Execute astronomical observations and utilize Global Positioning System (GPS) data to determine precise geographic positions, time systems, and azimuths. |
| CO4 | Generate accurate 3D maps, orthomosaics, and Digital Elevation Models (DEM) using UAV (drone) photogrammetry and image processing tools.                  |

**UNIVERSITY POLYTECHNIC  
BIRLA INSTITUTE OF TECHNOLOGY MESRA – 835215 (RANCHI)  
DEPARTMENT OF CIVIL ENGINEERING**

|            |  |
|------------|--|
| <b>CO5</b> | Formulate geospatial solutions by integrating Remote Sensing and GIS frameworks to address engineering challenges in infrastructure and disaster management. |
|------------|--|

**COURSE CONTENT DETAILS:**

| <b>MODULE</b> | <b>TOPICS/SUBTOPICS</b>  |
|---------------|--|
| 1             | <p><b>Geodetic Surveying and Triangulation</b></p> <p>1.1 Foundations: Definition and scope of Geodetic surveying; fundamental differences between Plane and Geodetic surveys.<br/>           1.2 Triangulation Framework: Principles of triangulation; classification and orders of triangulation (Primary, Secondary, Tertiary).<br/>           1.3 Field Operations: Reconnaissance survey; criteria for selection of stations; requirements for towers and signals.<br/>           1.4 Station Geometry and Base Line Analysis: Intervisibility and heights of stations; effects of the Earth's curvature and atmospheric refraction. Methods of baseline measurement; equipment used, and essential corrections.</p> <p>Course Outcome: CO1, CO2 <span style="float: right;">Teaching Hours: 8 hrs</span></p> |
| 2             | <p><b>Theory of Errors and Survey Adjustments</b></p> <p>2.1 Error Fundamentals &amp; Distribution: Analysis of accidental errors and their behaviour using the Probability Curve (Normal Distribution).<br/>           2.2 Statistical Metrics: Definitions and calculations for Probable Error, mean error, and standard deviation.<br/>           2.3 Weightage Analysis: Application of the Laws of Weights to determine the relative reliability of different sets of observations.<br/>           2.4 Adjustment Principles: Implementation of the Principle of Least Squares through the formulation and solution of Normal Equations.</p> <p>Course Outcome: CO2 <span style="float: right;">Teaching Hours: 6 hrs</span></p>  |
| 3             | <p><b>Astronomical Surveying</b></p> <p>3.1 Basic Definitions: Celestial sphere, Zenith, Nadir, Azimuth, celestial horizon, visible horizon, celestial poles, polar axis, equator, ecliptic, equinoctial point, Solstices, Meridians, celestial Hour Angle, and declination.<br/>           3.2 Coordinate Systems and Time Systems: Horizon system and Equatorial system of coordinates. Sidereal time, Solar time, and Standard time calculations.<br/>           3.4 Determination of Position: Basics of determining Latitude, Longitude, and Azimuth of a survey line through celestial observations.</p> <p>Course Outcome: CO3 <span style="float: right;">Teaching Hours: 6 hrs</span></p>   |
| 4             | <p><b>Photogrammetry &amp; UAV (Drone) Surveying</b></p>   |

**PREREQUISITE:** DBS103 Applied Physics-I, DBS105 Mathematics-I, DCV 406 Civil Engineering Drawing

**COURSE OBJECTIVES:** This course enables the students:

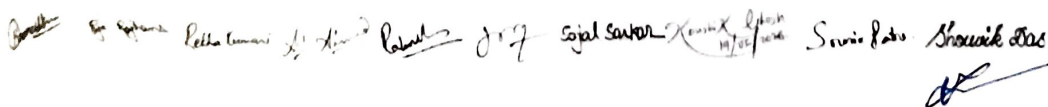

|   |  |
|---|--|
| 1 | To describe the procedure for classifying various types of building services                 |
| 2 | To explain the principles of vertical transportation systems.                                |
| 3 | To enumerate the fire safety requirements for multi-storeyed buildings.                      |
| 4 | To design a suitable plumbing system for a given type of building.                           |
| 5 | To evaluate building environmental systems for functional and comfortable indoor conditions. |

**COURSE OUTCOMES:** After the completion of this course, students will be able to:

|     |  |
|-----|--|
| CO1 | Explain the concepts, classification, and functional requirements of various building services and management systems.       |
| CO2 | Apply the principles of vertical transportation systems, including lifts, escalators, and ramps, in buildings.               |
| CO3 | Analyze fire hazards, fire protection systems, and fire safety provisions in buildings as per NBC guidelines.                |
| CO4 | Design suitable plumbing and drainage systems for buildings using standard plumbing practices and codes.                     |
| CO5 | Evaluate lighting, ventilation, acoustics, and solar water heating systems for improving building functionality and comfort. |

**COURSE CONTENT DETAILS:**

| MODULE | TOPICS/SUBTOPICS   |
|--------|--|
| 1      | <p><b>Overview of Building Services</b></p> <p>1.1 Introduction to Building Services: Definition, necessity, and functional requirements of building services in modern buildings.</p> |

**UNIVERSITY POLYTECHNIC**  
**BIRLA INSTITUTE OF TECHNOLOGY MESRA – 835215 (RANCHI)**  
**DEPARTMENT OF CIVIL ENGINEERING**

|   |  |
|---|--|
|   | <p>1.2 Classification of Buildings: Classification of buildings as per the National Building Code and their service requirements.</p> <p>1.3 Types of Building Services: Introduction to HVAC, lifts, escalators, fire safety, plumbing, lighting, acoustics, and electrical services.</p> <p>1.4 Building Management Systems (BMS): Concept, functions, and role of BMS in smart buildings.</p> <p>1.5 Role of Building Service Engineer: Responsibilities and importance of service engineers in planning and maintenance of buildings.</p> <p>Course Outcome: CO1, CO5 <span style="float: right;">Teaching hours: 8 hrs</span></p>   |
| 2 | <p><b>Modes of vertical communication</b></p> <p>2.1 Vertical Communication in Buildings: Objectives and modes of vertical movements in buildings.</p> <p>2.2 Lifts: Types, components, applications, and design provisions for basic size calculation of space enclosure to accommodate lift services.</p> <p>2.3 Escalators: Types, components, applications, and design provisions for basic size calculation of space enclosure to accommodate escalator services.</p> <p>2.4 Ramps: Necessity, design consideration, gradient calculation, layout planning, and accessibility features for elderly and physically challenged persons.</p> <p>2.5 Safety Measures in Vertical Transportation: Safety requirements and operational precautions for lifts, escalators, and ramps.</p> <p>Course Outcome: CO1, CO2 <span style="float: right;">Teaching hours: 8 hrs</span></p> |
| 3 | <p><b>Fire Safety and Protection</b></p> <p>3.1 Fire Hazards in Buildings: Causes of fire in buildings and fire protection requirements for multi-storeyed buildings.</p> <p>3.2 Fire Detection and Extinguishing Systems: Working principles and applications of fire detection and firefighting systems.</p> <p>3.3 Fire Safety Provisions: National Building Code requirements for fire safety in multi-storeyed buildings.</p> <p>3.4 Fire-Resistant Construction: Fire-resistant materials, fire-resistant construction methods, and their properties.</p> <p>3.5 Fire Safety Inspection and Evacuation: Procedures for fire safety inspection and evacuation planning in buildings.</p> <p>Course Outcome: CO1, CO3 <span style="float: right;">Teaching hours: 8 hrs</span></p>   |

**PREREQUISITE:** DCV 406 Civil Engineering Drawing

**COURSE OBJECTIVES:** This course enables the students

|    |  |
|----|--|
| 1. | Remember fundamental legal definitions, building classifications, and the history of the National Building Code (NBC). |
| 2. | Understanding the principles of land-use zoning and the socio-environmental impact of building regulations.            |
| 3. | Apply NBC standards for room dimensions and fire safety to develop functional building layouts.                        |
| 4. | Analyze site constraints to calculate permissible Floor Area Ratio (FAR) and Ground Coverage.                          |
| 5. | Evaluate building plans for compliance with barrier-free design and professional ethical standards.                    |
| 6. | Create professional-grade digital submission drawings and accurate Area Statement tables for municipal sanction.       |

**COURSE OUTCOMES:** After the completion of this course, students will be able to:

|     |   |
|-----|---|
| CO1 | Interpret legal terminology, zoning regulations, and the National Building Code (NBC) to determine plot development potential.                        |
| CO2 | Apply site planning principles and mandatory space standards to design efficient residential and public building layouts.                             |
| CO3 | Integrate fire safety, natural ventilation, and essential utility services into building designs per statutory requirements.                          |
| CO4 | Assess the legality of structures regarding accessibility, parking norms, and the digital approval workflow.  |
| CO5 | Produce professional submission drawings, manage regularization processes, and adhere to professional ethics and liabilities in engineering practice. |

**PREREQUISITE:** DBS101 Engineering Chemistry, DBS103 Applied Physics-I

**COURSE OBJECTIVES:** This course enables the students to

|    |   |
|----|---|
| 1. | Remember the various sources of energy and their historical impact on society.              |
| 2. | Understand the scientific principles behind solar, wind, and biomass energy conversion.     |
| 3. | Apply energy conservation techniques to reduce the carbon footprint in industrial settings. |
| 4. | Analyze the economic and environmental trade-offs of different energy storage systems.      |
| 5. | Evaluate the feasibility of renewable energy integration in existing infrastructure.        |
| 6. | Create a basic plan for a green facility or energy-efficient workspace.                     |

**COURSE OUTCOMES:** After the completion of this course, students will be able to:

|     |  |
|-----|--|
| CO1 | Identify global and national energy reserves and explain the historical impact of fossil fuel consumption on climate change.                 |
| CO2 | Explain the operational mechanics of solar, wind, and biomass energy conversion and apply these principles to site-specific energy needs.    |
| CO3 | Analyze energy consumption patterns within a facility to identify inefficiencies and perform basic energy audits for industrial equipment.   |
| CO4 | Evaluate the environmental and economic trade-offs of clean technologies (Hydrogen, Nuclear) and waste-to-energy conversion methods.         |
| CO5 | Formulate a basic plan for a green workspace that integrates passive cooling, sustainable material selection, and energy-efficient lighting. |

**PREREQUISITE:** DBS103 Applied Physics-I, DBS105 Mathematics-I, DBS 201 Applied Physics-II.

**COURSE OBJECTIVES:** This course enables the students to

|    |  |
|----|--|
| 1. | Remember the fundamental definitions, branches of Geospatial Engineering, and the architecture of various global and regional GNSS systems like NavIC. |
| 2. | Understand the physics of Remote Sensing, including EM spectrum interactions and the operational characteristics of multispectral sensors.             |
| 3. | Apply GIS frameworks to perform geo-referencing, digitization, and spatial data modelling for civil engineering projects.                              |
| 4. | Analyze the accuracy of digital field data and UAV-based mapping for site layouts and volume calculations.   |
| 5. | Evaluate the suitability of geospatial applications for structural health monitoring, watershed management, and urban utility mapping.                 |
| 6. | Create basic digital elevation models (DEM) and thematic maps to solve real-world infrastructure challenges.   |

**COURSE OUTCOMES:** After the completion of this course, students will be able to:

|     |  |
|-----|--|
| CO1 | Explain the role of geospatial technologies and satellite systems in modern Indian infrastructure. |
| CO2 | Utilize GNSS and DGPS techniques for high-precision field mapping and error correction.            |
| CO3 | Interpret remote sensing data and spectral response curves for land use analysis.                  |
| CO4 | Develop GIS-based spatial models using vector and raster data for site suitability.                |
| CO5 | Execute digital surveys using Total Stations and UAVs for 3D terrain modelling.                    |

**COURSE CONTENT DETAILS:**

| MODULE | TOPICS/SUBTOPICS   |
|--------|--|
| 1      | <p><b>Introduction to Geospatial Engineering and Satellite Positioning (GNSS)</b></p> <p>1.1. Fundamentals: Definitions and importance of Geospatial Engineering. Branches: Geodesy, Photogrammetry, Remote Sensing (RS), GIS, and GNSS. Comparison between Geomatics and Geoinformatics. Role of a Geospatial technologist in India's infrastructure growth.</p> <p>1.2. GNSS Systems: Introduction to GPS (USA), GLONASS (Russia), Galileo (EU), and NavIC (India).</p> <p>1.3. Architecture: Space, Control, and User segments; Signal structure basics.</p> <p>1.4. Field Techniques: Static, Kinematic, and DGPS for high-precision field mapping.</p> <p>1.5. Accuracy: Signal interference, multipath errors, and atmospheric corrections.</p> <p>Course Outcome: CO1, CO2 <span style="float: right;">Teaching Hours: 6 hrs</span></p> |
| 2      | <p><b>Remote Sensing (RS) Principles &amp; Platforms</b></p> <p>2.1 Physics of RS: EM Spectrum, Solar reflection, and Thermal emission; Laws of Radiation and their relevance.</p> <p>2.2 Interactions: EM radiation interaction with the atmosphere (scattering, absorption, emission) and the ground (spectral response curves).</p> <p>2.3 2.3 Sensors: Multi-spectral scanners and imaging devices; Characteristics of LANDSAT, SPOT, and Sentinel sensors.</p> <p>2.4 Data: RS Platforms (Airborne/Satellite); Basis of remote sensing image representation (Pixels/DN values).</p> <p>Course Outcome: CO3 <span style="float: right;">Teaching Hours: 6 hrs</span></p>   |
| 3      | <p><b>Geographic Information Systems (GIS)</b></p> <p>3.1 Framework: Essential components of GIS (Hardware, Software, Data, People, Methods).</p> <p>3.2 Data Models: Different types of vector data (Point, Line, Polygon) and Raster data structures.</p> <p>3.3 Topology: Concept of topology and its importance in spatial connectivity and adjacency.</p> <p>3.4 Operations: Geo-referencing, Digitization, and demonstration through GIS software.</p> <p>Course Outcome: CO4 <span style="float: right;">Teaching Hours: 6 hrs</span></p>   |
| 4      | <p><b>Digital Land Surveying &amp; UAV Mapping</b></p> <p>4.1 Total Station: Principles, electronic data logging, and application in site layouts.</p> <p>4.2 Drone Surveying (UAV): Introduction to Drones for topographic mapping and volume calculations.</p> <p>4.3 Lidar Basics: Light Detection and Ranging (LiDAR) for 3D terrain modelling and forest canopy analysis.</p> <p>4.4 Digital Mapping: Creation of Digital Elevation Models (DEM) and contours from digital field data.</p>  |

**COURSE OBJECTIVES:** This course enables the students to;

|    |  |
|----|--|
| 1. | To train students in determining basic phase relationships, including moisture content, specific gravity, and in-situ density using standard field methods.                                |
| 2. | To enable students to perform sieve and hydrometer analysis alongside Atterberg limits testing to systematically classify soils according to standard codes.                               |
| 3. | To introduce testing methodologies for determining the coefficient of permeability and optimal compaction characteristics of soils.  |
| 4. | To instruct students on assessing the shear strength parameters of cohesive and cohesionless soils using direct shear and unconfined compression tests under specific loading constraints. |
| 5. | To expose students to complex triaxial cell setups (Unconsolidated Undrained condition) to interpret simulated stress-strain behaviour for deep foundation and slope stability parameters. |

**Course Outcomes:** After the completion of this course, students will be able to

|     |  |
|-----|--|
| CO1 | Demonstrate proficiency in operating modern engineering apparatus to perform standard field and laboratory tests on various soil samples.                  |
| CO2 | Conduct experimental setups to evaluate the coefficient of permeability and optimal densification parameters of soil samples.                              |
| CO3 | Operate direct shear, unconfined compression, and triaxial testing systems to determine the strength parameters of cohesive and cohesionless soils.        |
| CO4 | Analyze experimental field data, plot standard geotechnical engineering curves, and calculate underlying mathematical relationships.                       |
| CO5 | Evaluate soil characteristics against Indian Standard (IS) codes to systematically classify soils and produce standardized engineering test documentation. |

**COURSE OBJECTIVES:** This course enables the students:

|   |   |
|---|---|
| 1 | To interpret the physical and mechanical properties of cement and aggregates through standard laboratory tests. |
| 2 | To evaluate properties of fresh concrete, such as workability, using practical methods.                         |
| 3 | To design a concrete mix for a given grade and assess its strength characteristics.                             |
| 4 | To perform non-destructive tests for quality assessment of concrete.  |
| 5 | To develop practical skills in testing procedures, data analysis, and interpretation as per IS codes.           |

**COURSE OUTCOMES:** After the completion of this course, students will be able to:

|     |   |
|-----|---|
| CO1 | Determine the physical properties of cement and aggregates using standard laboratory tests.                                 |
| CO2 | Evaluate the workability of fresh concrete using the slump cone and compaction factor tests.                                |
| CO3 | Design and prepare concrete mixes of specified grades and analyze compressive strength results at different curing periods. |
| CO4 | Assess the quality of concrete using non-destructive testing methods such as UPV and rebound hammer tests.                  |
| CO5 | Interpret experimental results and correlate them with standard specifications and theoretical concepts.                    |

**COURSE OBJECTIVES:** This course enables the students:

|   |   |
|---|---|
| 1 | Understand the fundamentals of building drawings, scales, symbols, and drafting conventions used in civil engineering.                  |
| 2 | Develop the ability to prepare and interpret drawings of building components such as masonry bonds, foundations, walls, and staircases. |
| 3 | Apply engineering drawing principles for the preparation of plans, elevations, sections, and building service layouts.                  |
| 4 | Gain proficiency in preparing water supply and drainage drawings for residential buildings.   |
| 5 | Utilize AutoCAD software for drafting, editing, and preparing professional building drawings.   |

**COURSE OUTCOMES:** After the completion of this course, students will be able to:

|     |  |
|-----|--|
| CO1 | Explain the types of building drawings, scales, conventional symbols, and drafting standards used in building construction.        |
| CO2 | Prepare drawings of masonry bonds, load-bearing structures, shallow foundations, and staircases using standard drafting practices. |
| CO3 | Develop and interpret residential building plans, elevations, and sectional drawings for building construction.                    |
| CO4 | Prepare water supply and drainage layouts for residential buildings and analyze their functional requirements.                     |
| CO5 | Create residential building plans, elevations, and sections using AutoCAD tools and commands.                                      |
