Yes

The syllabus may be more application oriented. The syllabus is huge. There should be sessional class to understand the application of big data concept.

If yes, please mention the module and suggestions

Yes

The first module meets the objective to classify and explain a network intrusion detection system. The module two does not discuss how to develop predictive measures to assess and prevent intrusion. The other modules should have a clearly defined syllabus to enable students to develop intrusion analysis systems. This was achieved by the undersigned by discussing research papers dealing with intrusion data handling which the students found interesting. However, it should be explicitly included in the syllabus. Content peratining to hacking is also missing.

Some of the modules need to be updated to be more in sync with modern principles of operating systems and the length of the syllabus is too vast to be accommodated properly in a semester.

Do you have any suggestion regarding the improvement of the course: Yes/ No

Yes

If yes, please mention the module and suggestions

The syllabus for the course tries to do too many things while not going into the depth of any one language. This leaves the students confused and the teacher with very little option to get to meaningful depths. Plus the syllabus is quite out dated.

If yes, please mention the module and suggestions

Yes

Any other specific comments:

Some of the modules need to be updated to be more in sync with modern principles of operating systems and the length of the syllabus is too vast to be accommodated properly in a semester.
