BIRLA INSTITUTE OF TECHNOLOGY
MESRA
RANCHI, INDIA

CHOICE BASED CURRICULUM

Computer Science and Engineering

P.G Programme

(M. Tech in Information Security)

Department of Computer Science & Engineering
Birla Institute of Technology, Mesra, Ranchi - 835215 (India)

Institute Vision

To become a Globally Recognized Academic Institution in consonance with the social, economic and ecological environment, striving continuously for excellence in education, research and technological service to the National needs.

Institute Mission

- To educate students at Undergraduate, Postgraduate Doctoral and Post-Doctoral levels to perform challenging engineering and managerial jobs in industry.
- To provide excellent research and development facilities to take up Ph.D. programmes and research projects.
- To develop effective teaching and learning skills and state of art research potential of the faculty.
- To build national capabilities in technology, education and research in emerging areas.
- To provide excellent technological services to satisfy the requirements of the industry and overall academic needs of society.

Department Vision

The department strives to be recognized for outstanding education and research, leading to excellent professionals and innovators in the field of Computer Science and Engineering, who can positively contribute to the society.

Department Mission

- To impart quality education and equip the students with strong foundation that could make them capable of handling challenges of the new century.
- To maintain state of the art research facilities and facilitate interaction with world's leading universities, industries and research organization for constant improvement in the quality of education and research.

Programme Educational Objectives (PEOs) –Information Security

PEO 1: Students are prepared to identify, analyze and solve research problems emphasizing security concerns in context of data, computer network and computational system. They are trained to develop practical and efficient solutions to the challenges in the growing field of information security.

PEO 2: Students are imparted with strong base of knowledge that makes them suitable for industries, teaching and research.

PEO 3: Students are trained in such a way that makes them capable of exploiting and enhancing theoretical and practical knowledge of computer science with focus on security.

PEO 4: Students are inculcated with the sensitivity towards ethics, public policies and their responsibilities towards the society.

PROGRAM OUTCOMES (POs)
M. Tech. in Information Security

PO1: An ability to independently carry out research /investigation and development work to solve practical problems.

PO2: An ability to write and present a substantial technical report/document.

PO3: Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

PO4: An ability to apply knowledge of mathematics and advanced computing & networking technologies for solving problems.

PO5: An ability to design and conduct experiments and to analyze and interpret data related to software and hardware design solutions.

PO6: An ability to identify, formulate and solve security issues based on the fundamental understanding of concepts related to data communication and computer networks.

COURSE INFORMATION SHEET

Course code: CS501
Course title: MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE
Pre-requisite(s): Discrete Mathematics
Co- requisite(s):
Credits: L: 3   T: 0   P: 0
Class schedule per week: 03
Class: M. Tech
Semester / Level: I/5
Branch: Information Security
Name of Teacher:

Course Objectives

This course enables the students to:

1.	Present basic concepts and techniques of linear algebra, probability, statistics and graph theory
2.	Develop mathematical thinking and problem-solving skill
3.	Provide the foundations of probabilistic and statistical analysis
4.	Explain graphs to formulate computational problems

Course Outcomes

After the completion of this course, students will be able to:

CO1	Demonstrate skills in solving mathematical problems
CO2	Apply knowledge of computing and mathematics appropriate to the discipline
CO3	Analyze problems and identify the computing requirements appropriate to its solution
CO4	Explain basic concepts in probability theory and statistical analysis
CO5	Articulate the advanced courses in Computer science such as Coding Theory, Artificial Intelligence, Numerical Computation, etc.

SYLLABUS

Module I:
Linear Algebra
Introduction: Matrices and solving set of linear equations, Vector space, Subspace, Linear combination of vectors, Linear dependence and independence of vectors, Bases and dimensions.

(8L)

Module II:
Inner product spaces, Orthogonal vectors and dual vectors, Eigen values and Eigen vectors, Linear programming.

(8L)

Module III:
Probability and Statistics
Frequency distribution and measures of central tendency mean, median mode, quartiles, measures of dispersions and skewness, standard deviation, mean deviation, coefficient of variation, moments.

(8L)

Module IV:
Probability: definition, Distribution: discrete and continuous, Chi-square test, t-test.

(8L)

Module V:
Graph Theory
Introduction: Graphs and its types, Representation of graphs: Adjacency matrix, Incidence matrix, Adjacency list, Planar graph, Kuratowski's Graphs, Clique and maximum Clique finding algorithms.

(8L)

Books recommended:

TEXT BOOK
1. K. Haffman, and R. Kunze, "Linear Algebra", 2nd Edition, Pearson, 2015. **(T1)**

COURSE INFORMATION SHEET

Course code: CS502
Course title: ADVANCED DATA STRUCTURES
Pre-requisite(s): Data Structures, Algorithm Analysis
Co- requisite(s):
Credits: L: 3   T: 0   P: 0
Class schedule per week: 03
Class: M. Tech
Semester / Level: I/5
Branch: Information Security
Name of Teacher:

Course Objectives

This course enables the students:

1.	The student should be able to choose appropriate data structures, understand the ADT/libraries, and use it to design algorithms for a specific problem.
2.	Students should be able to understand the necessary mathematical abstraction to solve problems.
3.	To familiarize students with advanced paradigms and data structure used to solve algorithmic problems.
4.	Student should be able to come up with analysis of efficiency and proofs of correctness.

Course Outcomes

After the completion of this course, students are expected to:

CO1	Understand the implementation of symbol table using hashing techniques.
CO2	Develop and analyze algorithms for red-black trees, B-trees and Splay trees.
CO3	Develop algorithms for text processing applications.
CO4	Interpret the basic working of advanced heaps.
CO5	Appraise the implementation of symbol table using hashing techniques.

SYLLABUS

Module I:
Dictionaries: Definition, Dictionary Abstract Data Type, Implementation of Dictionaries. Hashing: Review of Hashing, Hash Function, Collision Resolution Techniques in Hashing, Separate Chaining, Open Addressing, Linear Probing, Quadratic Probing, Double Hashing, Rehashing, Extendible Hashing.

(8L)

Module II:
Skip Lists: Need for Randomizing Data Structures and Algorithms, Search and Update Operations on Skip Lists, Probabilistic Analysis of Skip Lists, Deterministic Skip Lists

(8L)

Module III:
Trees: Binary Search Trees, AVL Trees, Red Black Trees, 2-3 Trees, B-Trees, Splay Trees

(8L)

Module IV:
Heaps: Balanced Search Trees as Heaps, Array-Based Heaps, Heap-Ordered Trees and Half-Ordered Trees, Leftist Heaps, Skew Heaps, Binomial Heaps, Changing Keys in Heaps, Fibonacci Heaps, Heaps of Optimal Complexity, Double-Ended Heap Structures and Multidimensional Heaps, Heap-Related Structures with Constant-Time Updates.

(8L)

Module V:
Text Processing: Sting Operations, Brute-Force Pattern Matching, The Boyer-Moore Algorithm, The Knuth-Morris-Pratt Algorithm, Standard Tries, Compressed Tries, Suffix Tries, The Huffman Coding Algorithm, The Longest Common Subsequence Problem (LCS), Applying Dynamic Programming to the LCS Problem.

(8L)

Books recommended:

COURSE INFORMATION SHEET

Course code: IT502
Course title: FUNDAMENTALS OF INFORMATION SECURITY
Pre-requisite(s):
Co- requisite(s):
Credits: L: 3   T: 0   P: 0
Class schedule per week: 03
Class: M. Tech
Semester / Level: I/5
Branch: Information Security
Name of Teacher:

Course Objectives

This course enables the students:

1.	Broad understand of What is security and its terminology
2.	Know about Models for discussing security issues
3.	In depth understanding of Attacks and their counter measures.
4.	Information of how to apply defence in depth
5.	Evaluate available measures to confirm information reliability

Course Outcomes

After the completion of this course, students will be:

CO1	Identify requirements of security and its related terminology
CO2	Classify and compare Attacks and their impact on information security
CO3	Evaluate the types of treats and vulnerabilities in context to the risks associated and their countermeasures.
CO4	Illustrate access control and application of defence against risks and threats.
CO5	Summarize about malware, Malicious code threats, Attack, its prevention and detection

SYLLABUS

Module I:
Basics of Information systems security: Information systems security, Seven domains of It infrastructure, Weak links in security, IT security Policy Framework

(8L)

Module II:
Attacks Threats and Vulnerabilities: Malicious attacks Threats and Vulnerabilities, Attack tools, What is security breach, Malicious softwares, Countermeasures.
Risk management, BIA, BCP and DRP, Assessing risk and Vulnerabilities, Compliance laws, confidentiality of data

(8L)

Module III:
Access Controls basics of access controls, identification methods, authentication processes and requirements, Models and treats to access controls

(8L)

Module IV:
Risk management and information security, risk analysis, evaluating countermeasures, steps to disaster recovery. Types of backups.

(8L)

Module V:
Main types of malware, Malicious code threats, Attack, its prevention and detection, Information security standards.

(8L)

Credits: L: 3   T: 0   P: 0
Class schedule per week: 03
Class: M. Tech
Semester / Level: I/5
Branch: Information Security
Name of Teacher:

Course Objectives

This course enables the students:

1.	To understand the foundations of cryptographic attacks.
2.	To gain knowledge of encrypting data, and to choose between different algorithms.
3.	To prepare students for research in the area of cryptography and enhance students communication and problem solving skills
4.	To differentiate between the encryption techniques and know their suitability to an application.
5.	To effectively apply their knowledge to the construction of secure cryptosystems.

Course Outcomes

After the completion of this course, students will be able to:

1.	Understand the various types of cryptographic attacks and the mathematics behind cryptography.
2.	Describe the various types of ciphers and hash functions.
3.	Apply the different cryptographic techniques to solve real life problems.
4.	Evaluate different techniques as to their suitability to various applications.
5.	Develop a cryptosystem keeping in view social issues and societal impacts.

SYLLABUS

Module I:
Foundations – Protocol Building Blocks - Basic Protocols - Intermediate Protocols - Advanced Protocols - Zero-Knowledge Proofs - Zero-Knowledge Proofs of Identity -Blind Signatures - Identity-Based Public-Key Cryptography.

(8L)

Module II:
Key Length - Key Management – Public Key Cryptography versus Symmetric Cryptography - Encrypting Communications Channels - Encrypting Data for Storage - Hardware Encryption versus Software Encryption - Compression, Encoding, and Encryption - Detecting Encryption – Hiding and Destroying Information.

(8L)

Module III:
Information Theory - Complexity Theory - Number Theory - Factoring - Prime Number Generation - Discrete Logarithms in a Finite Field - Data Encryption Standard (DES) – Lucifer - Madryga - NewDES - GOST – 3 Way – Crab – RC5 - Double Encryption - Triple Encryption - CDMF Key Shortening - Whitening.

(8L)

Module IV:
Pseudo-Random-Sequence Generators and Stream Ciphers – RC4 - SEAL - Feedback with Carry Shift Registers - Stream Ciphers Using FCSRs - Nonlinear-Feedback Shift Registers - System-Theoretic Approach to Stream-Cipher Design - Complexity-Theoretic Approach to Stream-Cipher Design - N- Hash - MD4 - MD5 - MD2 - Secure Hash Algorithm (SHA) - OneWay Hash Functions Using Symmetric Block Algorithms - Using Public-Key Algorithms - Message Authentication Codes

(8L)

Module V:
RSA - Pohlig-Hellman - McEliece - Elliptic Curve Cryptosystems -Digital Signature Algorithm (DSA) - Gost Digital Signature Algorithm - Discrete Logarithm Signature Schemes - Ongchnorr-Shamir -Cellular Automata - Feige-Fiat-Shamir -Guillou-Quisquater - Diffie-Hellman - Station-to-Station Protocol -Shamir's Three-Pass Protocol - IBM Secret-Key Management Protocol - MITRENET - Kerberos - IBM Common Cryptographic Architecture.

COURSE INFORMATION SHEET

Course code: IT505
Course title: MOBILE AND WIRELESS SECURITY
Pre-requisite(s): Data Structures
Co- requisite(s):
Credits: L: 3   T: 0   P: 0
Class schedule per week: 03
Class: M. Tech
Semester / Level: I/5
Branch: Information Security
Name of Teacher:

Course Objectives

This course enables the students will be:

1.	Able to understand the internals of the Android mobile OS. Study the Messaging, Graphics, Audio, Video, Camera, GPS, Networking, File System, Touch Sensors, and other subsystems.
2.	Able to understand the combined impact of security on the architecture, design, and security of mobile computing, in the context of Android.
3.	Have a broad knowledge of the state-of-the-art and open problems in mobile and wireless security
4.	Enhance their potential to do research or pursue a career in this rapidly developing area.
5.	Able to be introduced to new, advanced research topics to have hands--on experience with developing security features.

Course Outcomes

After the completion of this course, students will be able to:

1.	Identify state-of-the-art and open problems in mobile and wireless security.
2.	Analyse all relevant aspects of security in mobile and wireless networks.
3.	Assess the impact of integrating media services, location services, in the context of mobile messaging devices on privacy and security.
4.	Summarise developing security features in current Wireless and mobile systems.
5.	Design of secure system and applications on Android.

SYLLABUS

Module I:
Introduction to wireless and mobile networks security, Review of Network Security: from Crypto to Security Protocols – Fundamentals of Wireless & Mobile Systems: key features and mechanisms of wireless and mobile systems, Cryptographic Protocols for Mobile and Wireless Networks, Key Management in Mobile and Wireless Computing, Reasoning about Security and Privacy.

(8L)

Module II:
Privacy and Anonymity in Mobile and Wireless Computing, Public Key Infrastructure in Mobile and Wireless Environments, Security Standards in current Wireless & Mobile Systems: WiFi Security (WEP, WPA, WPA-Enterprise); Cellular Security (GSM, 3G, LTE); –Internet of Things / Wireless Sensor Networks / RFID – Emerging Privacy concerns: location, tracking, traffic analysis, mobile and the cloud.

(8L)

Module III:
Security Architectures and Protocols in WLANs and B3G/4G Mobile Networks, Security and Privacy features into Mobile and Wearable devices, Location Privacy, Wireless Ad hoc and Sensor Networks Security, Role of Sensors to Enable Security.

(8L)

Module IV:
Security of Mobile Computing Platforms – Android and iOS security models – Threats and emerging solutions (e.g., side channel attacks) Security and Privacy in Pervasive Computing, Trust Establishment, Negotiation, and Management, Secure PHY/MAC/routing protocols.

(8L)

Module V:
Security under Resource Constraints (bandwidth, memory, energy, and computation constraints).

(8L)

Course Objectives

This course enables the students will be able to:

1.	Understand issues related to the protection of digital media.
2.	Know techniques such as selective video encryption for real-time requirements
3.	Identify applications, parameters, and requirements of the digital watermarking
4.	Obtain an understanding for , key management, and streaming media protection
5.	Able to design applications using watermarking and other protection schemes.

Course Outcomes

After the completion of this course, students will be able to:

1.	Identify multiple issues related to the protection of digital media, including audio, image, and video content
2.	Analyzes techniques such as selective video encryption for real-time requirements, chaos-based encryption, key management, and streaming media protection
3.	Illustrates lossless data hiding, scalable image and video authentication, and signature-based media authentication
4.	Assess the applications, parameters, and requirements of the digital watermarking framework
5.	Summarize the vulnerabilities of protection schemes in multimedia content.

SYLLABUS

Module I:
Intro to Multimedia, Basics of digital audio, Basics of digital imaging

(8L)

Module II:
Demands on Info. Security and Protection Demands on Info. Security and Protection, Intellectual property management for digital media

(8L)

Module III:
Secure Delivery of Multimedia Content, Basic cryptography concepts Media encryption techniques/systems "Robust" and secure media hashing, Key management Quantifying security

(8L)

Module IV:
Data Embedding, Basic embedding techniques and theory, Data embedding for various applications, Data embedding for various media types

(8L)

Module V:
Multimedia Fingerprinting: Trace Traitors, Multimedia fingerprinting for tracing traitor, Steganalysis, Non-intrusive forensics, Standardization and Integration, Standardization on media security.

COURSE INFORMATION SHEET

Course code: CS514
Course title: SOFTWARE METRICS
Pre-requisite(s): Software Engineering, Software Testing
Co- requisite(s):
Credits: L: 3   T: 0   P: 0
Class schedule per week: 03
Class: M. Tech
Semester / Level: I/5
Branch: Information Security
Name of Teacher:

Course Objectives
After the completion of this course, students will be:

1.	Provide a basic understanding and knowledge of the software metrics.
2.	Understand the importance of Metrics data collection.
3.	Analysis and Metrics for object-oriented systems.
4.	Understand external product attributes, Dynamic Metrics and Resource measurement.

Course Outcomes
After the completion of this course, students will be:

CO1	Able to understand the importance of the software development process.
CO2	Analyze the importance of modelling and modelling language.
C03	Design and develop correct and robust software products.
CO4	Explain the business requirements pertaining to software development.
CO5	Design Metrics for object-oriented systems.

SYLLABUS

Module I:
Basics of measurement : Measurement in software engineering Scope of software metrics Representational theory of measurement Measurement and models Measurement scales Meaningfulness in measurement Goal-based framework for software measurement Classifying software measures Determining what to measure Software measurement validation Empirical investigation Types of investigation Planning and conducting investigations.

(8L)

Module II:
Measuring size, Aspects of software size Length, functionality and complexity Measuring structure Types of structural measures Control-flow structure Modularity and information flow attributes Data structures.

(8L)

Module III:
Modeling software quality Measuring aspects of software quality Software reliability Basics of software reliability Software reliability problem Parametric reliability growth models Predictive accuracy Recalibration of software-reliability growth predictions Importance of operational environment Wider aspects of software reliability.

(8L)

Module IV:
The intent of object-oriented metrics Distinguishing characteristics of object-oriented metrics Various object-oriented metric suites LK suite CK suite and MOOD metrics
Runtime Software Metrics Extent of Class Usage Dynamic Coupling Dynamic Cohesion and Data Structure Metrics.

(8L)

Module V:
The intent of component-based metrics, Distinguishing characteristics of comp.
Measuring productivity, teams, tools, and methods.

(8L)

COURSE INFORMATION SHEET

Course code: CS522
Course title: PATTERN RECOGNITION AND APPLICATION
Pre-requisite(s): Linear Algebra, Vector Calculus, Data Structure& Programming
Co- requisite(s):
Credits: L: 3   T: 0   P: 0
Class schedule per week: 03
Class: M. Tech
Semester / Level: I/5
Branch: Information Security
Name of Teacher:

Course Objectives

This course enables the students to:

1.	Be familiar with both the theoretical and practical aspects Pattern Recognition.
2.	Have described the foundation of pattern formation, measurement, and analysis.
3.	Understand the mathematical and computer aspects of while extracting features of an object.
4.	Learn the techniques of clustering and classification for various applications.

Course Outcomes

After the completion of this course, students will be able to:

CO1	Apply their knowledge on Real World Problems while converting these problems to computer compatible problems for Pattern Recognition.
CO2	Solve Decision-making model using Statistical and Mathematical Decision Theory.
CO3	Design clusters for various Pattern using classical and Modern clustering techniques.
CO4	Analyzing various Techniques for Pattern Classification and Clustering.
CO5	Develop Model for Pattern classification through Probabilistic or fuzzy.

SYLLABUS

Module I:
Introduction: Feature Vectors, Classifiers, Supervised, Unsupervised, MATLAB Tools.
Classifiers Based on Bayesian Theory, Linear Classifiers, Nonlinear Classifiers.

(8L)

Module II:
Feature Selection, Feature Generation I: Data Transformation and Dimensionality Reduction,
Feature Generation II.

(8L)

Module III:
Template Matching, Context Dependent Classification, Super vised Learning.

(8L)

Module IV:
Clustering Basic Concepts, sequential Algorithms.

(8L)

Module V:
Hierarchical algorithms, Fuzzy clustering, probabilistic clustering, Hard Clustering,
Optimization.

(8L)

Books recommended:

Branch: Information Security
Name of Teacher:

Course Objectives

This course enables the students to:

1.	Understand the basic concept and the IoT Paradigm
2.	Know the state of art architecture for IoT applications
3.	Learn the available protocols used for IoT
4.	Design basic IoT Applications.
5.	Evaluate optimal IoT applications.

Course Outcomes

After the completion of this course, students will be able to:

CO1	Identify the IoT Components and its capabilities
CO2	Explain the architectural view of IoT under real world constraints
CO3	Analyse the different Network and link layer protocols
CO4	Evaluate and choose among the transport layer protocols
CO5	Design an IoT application

SYLLABUS

Module I:
IoT-An Architectural Overview
Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations. M2M and IoT Technology Fundamentals- Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, Everything as a Service (XaaS), M2M and IoT Analytics, Knowledge Management.

(8L)

Module II:
IoT Architecture-State of the Art
Introduction, State of the art, Reference Model and architecture, IoT reference Model - IoT Reference Architecture; Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views. Real-World Design Constraints-Introduction, Technical Design constraints.

(8L)

Module III:
IoT Data Link Layer & Network Layer Protocols
PHY/MAC Layer (3GPP MTC, IEEE 802.11, IEEE 802.15), WirelessHART, Z-Wave, Bluetooth Low Energy, Zigbee Smart Energy, DASH7 - Network Layer-IPv4, IPv6, 6LoWPAN, 6TiSCH,ND, DHCP, ICMP, RPL, CORPL, CARP.

(8L)

Module IV:
Transport & Session Layer Protocols
Transport Layer (TCP, MPTCP, UDP, DCCP, SCTP)-(TLS, DTLS) – Session Layer-HTTP, CoAP, XMPP, AMQP, MQTT.

(8L)

Module V:
Layer Protocols & Security
Service Layer -oneM2M, ETSI M2M, OMA, BBF – Security in IoT Protocols – MAC 802.15.4, 6LoWPAN, RPL, Application Layer protocols.

(8L)

Name of Teacher:

Course Objectives

This course enables the students:

1.	Know about computer-based crime.
2.	Understand Technical and legal aspects of computer crime investigations
3.	Know the limitations of law and its enforcement agencies.
4.	Learn the procedures of recovering computer evidence and seize process.

Course Outcomes

After the completion of this course, students will be able to:

CO1	Exposure on computer-based crime.
CO2	Technical and legal aspects of computer crime investigations
C03	Know the limitations of law and its enforcement agencies.
CO4	Learn the procedures of recovering computer evidence and seize process.
CO5	Apply techniques for finding, preserving, presenting, and extracting information from the digital devices.

SYLLABUS

Module I:
Introduction: Cyberspace and Criminal Behavior, Traditional problems associated with computer-based crime, e cash problems, Computer Technology and History: Computer Language, Hardware, software, operating system, Internet, Network language.

(8L)

Module II:
Early Hackers and Theft Components: Phreakers, Hacking, Commodities, Intellectual property.
Contempory computer crime: web based criminal activity, money laundering,

(8L)

Module III:
Identity theft and identity fraud: Typologies of internet theft, virtual identity, credit identity. Prevalence and victimology, physical methods, of identity theft, phishing, spyware, trojans, insurance and loan fraud, immigration fraud. Terrorism and organized crime:Terror online, criminal activities, organized crime as cyber gangs., technology used in organized crime. Data piracy.

(8L)

Module IV:
Avenues for Prosecution and Government efforts: Act, Law enforcement agencies, International efforts, Cyber law and its amendments of current state, other legal considerations.

(8L)

Module V:
Forensic Terminologies and Developing forensic capabilities, Searching and seizing computer related evidence, Processing of evidence and report preparation.

(8L)

COURSE INFORMATION SHEET

Course code: CS503
Course title: ADVANCED DATA STRUCTURES LAB
Pre-requisite(s):
Co- requisite(s): Advanced Data Structures
Credits: L: 0   T: 0   P: 2
Class schedule per week: 04
Class: M. Tech
Semester / Level: I/5
Branch: Information Security
Name of Teacher:

Course Objectives

This course enables the students to:

1.	The student should be able to choose appropriate data structures, understand the ADT/libraries, and use it to design algorithms for a specific problem.
2.	Students should be able to understand the necessary mathematical abstraction to solve problems.
3.	To familiarize students with advanced paradigms and data structure used to solve algorithmic problems.
4.	Student should be able to come up with analysis of efficiency and proofs of correctness.

Course Outcomes

After the completion of this course, students will be able to:

CO1	Understand to implement the symbol table using hashing techniques.
CO2	Develop program for AVL, Red-Black trees, B-trees and Splay trees
CO3	Develop program for text processing applications
CO4	Learn the basic working of advanced heaps
CO5	Understand the implementation of symbol table using hashing techniques

SYLLABUS

List of Programs as Assignments:

1. **Lab Assignment No: 1**
   Write a program to implement a dictionary using the following ADTs. We assume all the entries in the dictionary to be distinct integers.

   a) Binary Search Tree (BST)
   b) Red Black Tree (RBT)

   Each ADT should support five operations, void Insert(val), boolean Delete(val), boolean Search(val), void ClearADT() and void DisplayADT(). Both search and delete operations should respond with a boolean value indicating whether the search/delete was successful or not. The objective of this assignment is to compare the performance of BST and RBT ADTs. You have to compute the time taken for completion of operations and study how the running times of ADT operations will vary across the two ADT implementations.

2. **Lab Assignment No: 2**
   Implement data structures to maintain a list of elements. In particular, implement the list as an array and as a linked list. Write a program to remove duplicates from the list. The code for remove duplicates functionality should remain the same across the two implementation of the list.
   Implement the following sequence of operations on the skip list:
   a) remove()   b) insert()   c) Search()   d) Update()
   Assume the coin flips for the first insertion yield two heads followed by tails, and those for the second insertion yield three heads followed by tails.

3. **Lab Assignment No: 3**
   Implement different Hashing functions and Collision Resolution Techniques.

4. **Lab Assignment No: 4**
   Implement Kruskal's algorithm for finding the minimum spanning tree of a given (positively) weighted (undirected) graph G. You must use the Union-Find data structure that implements both "union by rank" and "path compression" heuristics.

5. **Lab Assignment No: 5 &6**
   Implement the following priority queues:
   a) Binary Heap   b) Binomial Heap   c) Fibonacci Heap

   Your program should then create an appropriate priority queue object and perform makeHeap() method. After that, you should give the user menu options to insert(key), delete(key), extractMin(), findMin(), decrease(key), increase(key) updateKey(currentKey, newKey), and displayHeap(filename). You may assume that keys will be unique. For displayHeap(filename), you must output the tree structure of the priority queue (including linked list edges in Binomial Heap, etc) as a directed tree in the dot language format1 and store it in a file named filename (given as parameter).

6. **<u>Lab Assignment No: 7&8</u>**

   Implement Text Processing using Huffman Coding.

   Implement the compact representation of the suffix trie for the string "minimize minime".

   Implement a standard trie for the following set of strings: { abab, baba, ccccc, bbaaaa, caa, bbaacc, cbcc, cbca }.

7. **<u>Lab Assignment No: 9 &10</u>**

   One way to mask a message, *M*, using a version of *steganography*, is to insert random characters into *M* at pseudo-random locations so as to expand *M* into a larger string, *C*.

   For instance, the message,

   > ILOVEMOM,

   could be expanded into

   > AMIJLONDPVGEMRPIOM.

   It is an example of hiding the string, *M*, in plain sight, since the characters in *M* and *C* are not encrypted. As long as someone knows where the random

Course Objectives

This course enables the students to:

1.	To familiarize the student in introducing and exploring MATLAB
2.	Develop mathematical thinking and problem-solving skill
3.	To enable the student on how to approach for solving Engineering problems using simulation tools.
4.	To provide a foundation in use of this software for real time app

Course Outcomes

After the completion of this course, students will be able to:

CO1	Express programming & simulation for engineering problems.
CO2	Find importance of this software for Lab Experimentation.
CO3	Analyze problems and write basic mathematical ,electrical ,electronic problems in Matlab
CO4	Implement programming files with GUI Simulink.
CO5	Simulate basic Engineering problems

SYLLABUS

List of Programs as Assignments:

1. **Lab Assignment No: 1**
   Objective: To Understand and Implement Matrix Algebra
   1. To create Sparse matrices using the function sparse.
   2. To convert a sparse matrix to full matrix.

2. **Lab Assignment No: 2**
   Objective: To Understand and Implement Data Analysis
   1. To measure the daily high temperatures in three cities with different color.
   2. To solve a different cities temperature do the filter.

3. **Lab Assignment No: 3**
   Objective: To Understand and Implement Data Interpolation
   1. To Draw 2-D random data.
   2. To Draw Threshold of Human Hearing.

4. **Lab Assignment No: 4**
   Objective: To Understand and Implement Cubic Splines
   1. To design Spline differentiation and Integration.
   2. To design interpolated Spiral Y=f(X).

5. **Lab Assignment No: 5**
   Objective: To Understand and Implement Fourier Analysis
   1. To solve the use of the FFT, consider the problem of estimating the continuous
      Fourier transform of the signal
   f(t)=2e^{-3t} t ≥0, where f(t) is gven by
   F(ω)=2/(3+j ω)
   2. To design sawtooth Waveform at arbitrary points.

6. **Lab Assignment No: 6**
   Objective: To Understand and Implement Optimization
   1. To solve 1-D minimization and maximization.
   2. To design Rosenbrock's banana function.

7. **Lab Assignment No: 7**
   Objective: To Understand and Implement Differential Equations
   1. Design a van der Pol Solution.
   2. To solve Jacobian matrix.

8. **Lab Assignment No: 8**
   Objective: To Understand and Implement Two-Dimensional Graphics
   1. To add new plots to an existing plot by using the hold command.
   2. To create new Figure windows, use the figure command in the Command window or
      the **New Figure** selection from the **File** menu in the Command or Figure window.

9. **Lab Assignment No: 9**
   Objective: To Understand and Implement Three- Dimensional Graphics
   1. Plot = 2 with 0   5in polar coordinates.
   2. Design a Surface plot using the surf function.

10. **Lab Assignment No: 10**
   Objective: To Understand and Implement Images, Movies, and Sound
   1. To display 8-bit intensity and RGB images.
   2. To convert between indexed images and movie frames.

11. **Lab Assignment No: 11**
   Objective: To Understand and Implement Graphical User Interfaces
   1. Using uigetfile to find the startup.m file on the author's computer.
   2. Write a program using the function **guidata,** which stores and retrieves data in the GUI figure **'ApplicationData'** property.
   3. How to put walls by clicking a mouse button to make an arbitrary maze.
   4. Design a GUI System.

Course Objectives

This course enables the students to:

1.	To familiarize the student in introducing and exploring JAVA.
2.	Knowledge of the structure and model of the Java programming language.
3.	Use the Java programming language for various programming technologies.
4.	To provide a foundation for Java programming language to solve the given problems.

Course Outcomes

After the completion of this course, students will be able to:

CO1	Write, compile, and execute Java programs that may include basic data types and control flow constructs using J2SE or other Integrated Development Environments (IDEs)
CO2	Write, compile, and execute Java programs manipulating Strings and text documents.
CO3	Write, compile, execute Java programs that include GUIs and event driven programming
CO4	Create Applets and GUI
CO5	Executing Client server and socket programming

SYLLABUS

List of Programs as Assignments:

1. **Lab Assignment No: 1**
   Objective: To Understand and Implement COLLECTION FRAMEWORK
   1. To create sparse matrices using the function sparse.
   2. To convert a sparse matrix to full matrix.
2. **Lab Assignment No: 2**
   Objective: To Understand and Implement Generic Programming
   1. Write the tasks performed by type erasure?
   2. Write a generic method to exchange the positions of two different elements in an array?
3. **Lab Assignment No: 3**
   Objective: To Understand and Implement REFLECTION
   1. Write a program that finds and displays inheritance hierarchy of a specified class?
   2. Write a program that shows all public fields of a specified class?
4. **Lab Assignment No: 4**
   Objective: GUI Development with Swing
   1. Working with Text Fields
   2. Working with Buttons
   3. Working with Lists
   4. Working with Scroll Panes
5. **Lab Assignment No: 5**
   Objective: Implementing Robust Geometric Primitives
   1. Java Program to Apply Above-Below-on Test to Find the Position of a Point with respect to a Line
   2. Java Program to Compute the Area of a Triangle Using Determinants
   3. Java Program to Compute the Volume of a Tetrahedron Using Determinants
   4. Java Program to Find the Area of any Polygon Using Triangulation
6. **Lab Assignment No: 6**
   Objective: To Understand and Implement examples on "Convex Hull"
   1. Java Program to Implement Graham Scan Algorithm to Find the Convex Hull
   2. Java Program to Implement Gift Wrapping Algorithm in Two Dimensions
   3. Java Program to Implement Jarvis March to Find the Convex Hull
7. **Lab Assignment No: 7**
   Objective: To Understand and Implement examples on "Nearest Neighbor Search"
   1. Java Program to Find the Nearest Neighbour Using K-D Tree Search
   2. Java Program to Find Nearest Neighbour Using Voronoi Diagram
8. **Lab Assignment No: 8**
   Objective: To Understand and Implement Network Programming
   1. Working with URLs
   2. Socket Server Programming
   3. Client Server Programming
9. **Lab Assignment No: 9**
   Objective: To Understand and Implement SOCKET PROGRAMMING
   1.Write a java socket program to get the resource http://www.google.com/index.html using HTTP protocol?
   2. Write a program how do you get the IP address of a machine from its hostname?

10. **Lab Assignment No: 10**
    Objective: To Understand and Implement Java Web Applications
    1. Simple Servlet
    2. Java Web Applications - Get Request
    3. Java Web Applications - Post Request
11. **Lab Assignment No: 11**
    Objective: To Understand and Implement Advanced Java Input/output (NIO)
    1. File Copying With NIO
    2. Working with Buffers
    3. Working with File Data

Books recommended:

TEXT BOOKS
1. Uttam K Roy, Advanced JAVA Programming, Oxford University Press, 1st Edition , 2015 **(T1)**
2. Heerbert Schildt, Java: A Beginner's Guide, Seventh Edition,Oracle Press, 2014 **(T2)**

Course Evaluation:
Day to day progressive evaluation, Lab Quizzes, Surprise Tests, Online Lab performance and Viva Voce

Gaps in the syllabus (to meet Industry/Profession requirements):
Implementing of real world problems
POs met through Gaps in the Syllabus

Topics beyond syllabus/Advanced topics/Design:

POs met through Topics beyond syllabus/Advanced topics/Design: Teaching through research papers.

Course Delivery Methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Assignments/Seminars
CD3	Laboratory experiments/teaching aids
CD4	Industrial/guest lectures
CD5	Industrial visits/in-plant training
CD6	Self- learning such as use of NPTEL materials and internets
CD7	Simulation

MAPPING BETWEEN COURSE OUTCOMES AND PROGRAM OUTCOMES

CO	PO1	PO2	PO3	PO4	PO5	PO6
CO1	3	3	2	2	1	1
CO2	3	3	2	2	1	1
CO3	3	2	2	2	2	1
CO4	3	2	3	2	1	1
CO5	3	2	1	1	1	1

If satisfying and < 34% = 1, 34-66% = 2, > 66% = 3

MAPPING BETWEEN COURSE OUTCOMES AND COURSE DELIVERY METHOD

Course Outcomes	Course Delivery Method
CO1	CD1,CD6
CO2	CD1, CD6,CD7
CO3	CD1, CD2, CD3,
CO4	CD1, CD3,CD6,CD7
CO5	CD1,CD2,CD7
