

# **BIRLA INSTITUTE OF TECHNOLOGY**

## **CHOICE BASED CREDIT SYSTEM (CBCS) CURRICULUM**

*(Effective from Academic Session: Monsoon 2018)*

### **B.TECH IN INFORMATION TECHNOLOGY**

#### **DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING**

## **Institute Vision**

To become a Globally Recognised Academic Institution in consonance with the social, economic and ecological environment, striving continuously for excellence in education, research, and technological service to the National needs.

## **Institute Mission**

- To educate students at Under Graduate, Post Graduate, Doctoral, and Post-Doctoral levels to perform challenging engineering and managerial jobs in industry.
- To provide excellent research and development facilities to take up Ph.D. programmes and research projects.
- To develop effective teaching learning skills and state of art research potential of the faculty.
- To build national capabilities in technology, education, and research in emerging areas.
- To provide excellent technological services to satisfy the requirements of the industry and overall academic needs of society.

## **Department Vision:**

The department strives to be recognized globally for outstanding education and research, leading to excellent professionals and innovators in the field of Computer Science and Engineering, who can positively contribute to the society.

## **Department Mission**

1. To impart quality education and equip the students with strong foundation that could make them capable of handling challenges of the new century.
2. To maintain state of the art research facilities and facilitate interaction with world's leading universities, industries and research organization for constant improvement in the quality of education and research.

## Graduate Attributes

1. **Engineering Knowledge:** Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
2. **Problem Analysis:** Identify, formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
3. **Design/ Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
4. **Conduct investigations of complex problems** using research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of information to provide valid conclusions.
5. **Modern Tool Usage:** Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
6. **The Engineer and Society:** Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice.
7. **Environment and Sustainability:** Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.
9. **Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.
11. **Project Management and Finance:** Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long Learning:** Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## Programme Educational Objectives (PEOs)

The program aids professionals

1. To contribute significantly in the sector of information technology.
2. To develop into a visionary and an entrepreneur with a motivation to advance the society through information technology.
3. To become a noteworthy part of the state-of-the-art innovations and research in the field of information technology.
4. To encourage social responsibility towards impacting the nation's vision through significant innovations.

## (A) Programme Outcomes (POs)

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

**(B) Programme Specific Outcomes (PSOs)**

13. PSO 1: Ability to identify, analyse and provide efficient solutions that cater to problems of varying complexity in the field of computer science.
14. PSO 2: Ability to justify / evaluate solutions with help of sound mathematical foundations, algorithmic principles, theoretical computer science knowhow and research-based knowledge in view of perpetual advancements in computer science.
15. PSO 3: Inculcate best software practices and principles in consideration with existent societal, cultural, environmental and financial aspects.

## **(Semester III)**

### **COURSE INFORMATION SHEET**

**Course code:** BE101  
**Course title:** Biological Science for Engineers  
**Pre-requisite(s):** NIL  
**Co- requisite(s):** NIL  
**Credits:** 2      L:2      T:0      P:0  
**Class schedule per week:** 02  
**Class:** B. Tech  
**Semester / Level:** III-IV /First  
**Branch:** All  
**Name of Teacher:**

#### **Course Objectives**

This course enables the students to:

1.	Recognize and understand the basic cell biology, biomolecules, related metabolic pathways and applicable bioenergetics.
2.	Relate common biological phenomenon at molecular level.
3.	Describe the chemical nature of enzymes and mechanism of action for their function in biochemical reactions.
4.	Correlate the molecular methods of biological signal generation and propagation in living system.
5.	Comprehend the steps involved in common application of biotechnology such as applicable for creation of transgenics, stem cells, plant metabolites production, PCR, ELISA.

#### **Course Outcomes**

After the completion of this course, students will be able to:

CO1	Demonstrate an understanding of fundamental biochemical principles, such as the structure/function of biomolecules involved in living system.
CO2	Interpret the bio mechanism involved in signal generation and transmission.
CO3	Correlate the basic methods involved in common biotechnological application.
CO4	Apply and effectively communicate scientific reasoning and data involved in common biotechnological applications.

**Module-1:**

**Basic Cell Biology:** Origin of life, Cell theory, Cell Structure and function, Biomolecules, Cell cycle and cell division, Biological Organization. [5L]

**Module-2:**

**Bioenergetics and Metabolism:** Gibbs free energy and thermodynamics, aerobic and anaerobic respiration, Glycolysis, Krebs cycle and electron transport chain, Beta oxidation, Photosynthesis. [6L]

**Module-3:**

**Enzymes and its Application:** Classification of enzymes, Structure and mechanism of enzyme action and uses of enzymes, factors affecting enzyme activity, Immobilization of enzymes and their application. [5L]

**Module-4:**

**Biological Signal Generation and Propagation:** Nerve cell structure and signal propagation. Mechanism of vision and hearing, cell signaling, Circadian rhythm. [6L]

**Module-5:**

**Engineering Biological Systems and its Applications:**

Central dogma of molecular biology, Methods in genetic engineering and application, PCR, ELISA and its application, stem cell and tissue engineering. Artificial Intelligence in Biology, Plant factory. [6L]

**Books Recommended**

**Recommended Text Book**

1. Purves et al, (1998) Life: *The Science of Biology*, 4th Ed.
2. R. Dulbecco, The Design of Life.
3. Lehninger A, Principals of Biochemistry , 5th Ed

**Reference Book**

1. Stryer, L. (2002). *Biochemistry*. New York: W.H. Freeman.
2. K. Wilson & K.H. Goulding, (2006) *A biologist's guide to Principles and Techniques of Practical Biochemistry*.

### **COURSE INFORMATION SHEET**

Course code: IT201

Course title: **Basics of Intelligent Computing**

Pre-requisite(s):

Co- requisite(s):

Credits: L:3 T:0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: II/2

Branch: All

#### **Course Objectives**

This course enables the students:

A.	To know the basic functions of different AI branches.
B.	To understand the functionalities of IoT .

C.	To know the application of fuzzy logic.
D.	To understand the basic functionalities of a cloud based system.
E.	To find the basic functions of soft computing.

### **Course Outcomes:**

After the completion of this course, students will be able to:

1.	Identify the difference between different branches of AI.
2.	Analyze a fuzzy based system.
3.	Design Neural Networks to solve problems.
4.	Analyze a problem in terms of ANN point of view.
5.	Identify the components of a cloud-based system.

## **SYLLABUS**

### **Module I**

#### **Introduction**

Definition of Computing, Conventional Computing vs. Intelligent Computing, Necessity of Intelligent Computing, Current trends in Intelligent Computing

#### **AI Concepts**

Introduction to AI, AI problems and Solution approaches, Fundamentals of problem solving using Search and Heuristics, Overview of Knowledge-base creation, and Intelligent Agents, Classification of AI.

(8 L)

### **Module II**

#### **Introduction to Soft Computing**

Hard Computing vs. Soft Computing, Paradigms of Soft Computing, Real Life applications of Soft Computing

#### **Fuzzy Logic**

Classical Sets Vs Fuzzy Sets, Membership Functions, Fuzzy operations, Fuzzy Relations, Fuzzy Composition (Max-Min, Max-Product), Defuzzification, Fuzzy Inference System

### **Genetic Algorithm**

Principle of Optimization, Traditional vs Evolutionary optimization, Genetic Algorithm: Working Cycle of GA, Encoding, Crossover, Mutation.(8 L)

### **Module III**

#### **Introduction to Artificial Neural Networks:**

Biological Neuron to Artificial Neuron, Mc-Culloch Pitts Perceptron Model, Layer of Neurons, Activation Function, Artificial Learning, Types of Learning, Introduction to Back Propagation Networks, Applications of Neural Network. (8L)

### **Module IV**

#### **Introduction to Cloud computing**

Conventional Computing, Historical developments, Defining a Cloud, Cloud Computing reference model, Overview of Virtualization: Introduction, Types of cloud, Cloud Platforms: Amazon Web Services, Microsoft Azure, Cloud Applications (8L)

### **Module V**

#### **Introduction to IOT**

The IoT Paradigm, Concept of Things, IoT Hardware, IoT Protocols, IoT Architecture, enabling technologies of IoT, IoT Designing and its levels. (8L)

**Course title: Discrete Mathematics**

**Pre-requisite(s):**

**Co- requisite(s):**

**Credits: L:3 T:1 P:0 C: 4**

**Class schedule per week: 3 Lectures, 1 tutorial**

**Class: I. M.Sc. /B. Tech**

**Semester / Level: 2**

**Branch:**

**Name of Teacher:**

**Course Objectives:** This course enables the students to

1.	exposed to a wide variety of mathematical concepts that are used in the Computer Science discipline, which may include concepts drawn from the areas of Number Theory, Graph Theory and Combinatorics.
2.	come across a number of theorems and proofs. Theorems will be stated and proved formally using various techniques.
3.	gain the various graphs algorithms along with its analysis
4.	apply graph theory based tools in solving practical problems.

**Course Outcomes:** After the completion of this course, students will be able to

CO 1.	to model and analyze computational processes using analytic and combinatorial methods
CO 2.	solve the problems of graph theory using graph algorithms
CO 3.	apply computer programs (e.g. SAGE) to study graphs.
CO 4.	apply counting techniques to solve combinatorial problems and identify, formulate, and solve computational problems in various fields.
CO 5.	apply graph theory in the areas of computer science, operation research, biology, chemistry, physics, sociology, and engineering

## **SYLLABUS**

**MA205**

**Discrete Mathematics**

**Module I**

Mathematical logic and Mathematical Reasoning, Compound Statements, Propositional Equivalences, Predicates and Quantifiers, Methods of Proof, Mathematical Induction, Well-ordering principal, Recursive Definition and Algorithms.

[9L]

## Module II

Recurrence Relations, Classification of Recurrence Relations and their solutions by Characteristic Root method, Generating function and their various aspects, Utility of Generating function in solving Recurrence Relations.

[9L]

## Module III

Set, Operations on Set, Computer representation of Set, Relations, Properties/Classification of Relations, Closure operations on Relations, Matrix representation of Relations, Digraphs. Functions and their Representation, Classification of Functions, Warshall's algorithm, Discrete Numeric Functions, Growth of Functions, Big O, Big Q, Hash Function, Growth Functions.

[9L]

## Module IV

Binary Operations, Groups, Product and Quotients of Groups, Semi group, Products and Quotients of Semi groups, Permutation Group, Composition of Permutation, Inverse Permutation, Cyclic Permutation, Transposition, Even and Odd Permutation, Coding of Binary Information and Error Correction, Decoding and Error Correction.

[9L]

## Module V

Introduction to Graph, Graph Terminologies and their Representation, Connected & Disconnected graphs, Isomorphic Graph, Euler & Hamilton graphs. Introduction to Trees, Versatility of Trees, Tree traversal. Spanning Trees, Minimum Spanning Tree.

[9L]

## COURSE INFORMATION SHEET

**Course code:** EC203

**Course title:** Digital System Design

**Pre-requisite(s):** EC101 Basics of Electronics & Communication Engineering

**Co- requisite(s):**

**Credits:** L: 3 T:0 P:0 C:3

**Class schedule per week:** 3x1

**Class: B. Tech**  
**Semester / Level: III/02**  
**Branch: ECE**  
**Name of Teacher:**

### **Course Objectives**

This course enables the students to:

A.	Understand the basics of the digital electronics.
B.	Apply the knowledge of digital electronics to construct various digital circuits.
C.	Analyse the characteristics and explain the outputs of digital circuits.
D.	Evaluate and assess the application of the digital circuits.
E.	Design digital machine for simple computing and control.

### **Course Outcomes**

After the completion of this course, students will be able to:

CO1	Explain the concept of digital electronics.
CO2	Apply the knowledge to produce digital electronics circuits.
CO3	Analyse and categorize digital circuits.
CO4	Justify the uses of different digital circuits.
CO5	Schematize and demonstrate simple computing machines.

## **SYLLABUS**

**Module – 1:**

**Basics of Digital Electronics:** Number representation, Binary number system, Number base conversion, Octal, Hexadecimal and BCD codes, binary Arithmetic, Logic gates, Introduction to VHDL and Verilog, VHDL Models, Logic Families: TTL, ECL, and CMOS Logic Circuits, Logic levels, voltages and currents, fan-in, fan-out, speed, power dissipation. Comparison of logic families.

**Module – 2:**

**Simplification of Boolean functions:** Boolean Algebra, Basic theorems and Properties, De Morgan's theorem, Canonical & Standard forms, Simplification of Boolean function using Karnaugh map, POS& SOP simplification, Prime implicant, NAND and NOR implementation,.

**Module – 3:**

**Design of Combinational Circuits:** Analysis and design procedure, Parity Generators and Checkers, Adders, Subtractors, Look ahead carry, Adder, 4-bit BCD adder/subtractor, Magnitude comparator, Decoders, Encoders, Multiplexers, De-multiplexers, , Design of 1 bit ALU for basic logic and arithmetic operations.

**Module – 4:**

**Design of Sequential Circuits and Memories:** Basic Latch, Flip-Flops (SR, D, JK, T and Master-Slave), Triggering of Flip Flops, Synchronous and asynchronous counters, Registers, Shift Registers, Memories and Programmable Logic design, Types of memories, Memory Expansion and its decoding, Programmable Logic Arrays (PLA), Programmable Array Logic (PAL)

**Module – 5:**

**Design of simple computing machines:** SAP-I concepts with stress on timing diagrams, Microinstructions, Fetch and Execution cycle variable machine cycle, Hardware control Matrix, Macroinstructions, Microprogramming , Bus concepts, Multiplexed Minimum system. Pipelining concepts.

**Books recommended:****Textbooks:**

1. “Digital Design”, Morris Mano and Michael D. Ciletti ,5<sup>th</sup> edition PHI
2. “Digital System Design using VHDL”, Charles H Roth, Thomson Learning

**Reference books:**

1. Digital computer Electronics AP Malvino, 3rd Edition Mc Graw Hill

## COURSE INFORMATION SHEET

Course code: CS201

Course title: **Data Structures**

Pre-requisite(s): Programming for Problem Solving

Co- requisite(s): Data Structure Lab

Credits: L: 3 T: 1 P: 0

Class schedule per week: 4

Class: B. Tech

Semester / Level: II/2

Branch: CSE/IT

### Course Objectives

This course enables the students:

A.	To be familiar with basic techniques of algorithm analysis.
B.	To understand basic concepts about arrays, stacks, queues, linked lists, trees and graphs.

C.	To understand concepts of searching and sorting techniques.
D.	To implement various linear & non-linear data structures; and searching & sorting algorithms.
E.	To assess how the choice of data structures impacts the performance of a program.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Define various linear and non-linear data structures like stack, queue, linked list, tree and graph.
2.	Explain operations like insertion, deletion, traversal, searching, sorting etc. on various data structures.
3.	Design various data structures and their operations.
4.	Analyze the performance of data structure based operations including searching and sorting.
5.	Justify the choice of appropriate data structure as applied to specified problem definition.

## SYLLABUS

### Module I

#### Basic Concepts

**Definition** and basics of: Data Structure, ADT, Algorithms, Time and Space Complexity, Asymptotic Notations ( $O$ ,  $\theta$ ,  $\Omega$ ), Time complexity computation of non-recursive algorithms (like Matrix addition, Selection sort – using step count), Array – basic operations, concept of multi-dimensional array, Polynomial operations using Array, Sparse Matrix.

(8L)

### Module II

#### Stack and Queue

Stack ADT: basic operations, Queue ADT: basic operations, Circular Queue, Evaluation of Expressions, Another application or Mazing Problem.

(8L)

### Module III

#### Linked List

Singly Linked List: concept, representation and operations, Circular Linked List, Polynomial and Sparse Matrix operations using LL, Doubly Linked List: basic concept.

(8L)

### Module IV

#### Tree and Graph

Basic concepts and terminologies, Binary Search Tree and Heap, Disjoint Set, Graph: concept and terminologies, Concept of BFS, DFS, Spanning Tree, Connected Components.

(8L)

## Module V

### Searching and Sorting

Sequential Search and Binary Search, Insertion Sort, Heap Sort, Radix Sort, External Sorting: k-way merging approach.

(8L)

#### Text book:

1. Sahni Horwitz, Freed Anderson, Fundamentals of Data Structures in C, 2<sup>nd</sup> Edition (or latest), University Press. (T1)

#### Reference books:

1. Thareja Reema, Data Structures Using C, 2<sup>nd</sup> Edition, Oxford University Press. (R1)
2. Tanenbaum, Langsam, Augenstein, Data Structures using C, Pearson. (R2)

## COURSE INFORMATION SHEET

**Course code:** EE102

**Course title:** EE102 ELECTRICAL ENGINEERING LABORATORY

**Pre-requisite(s):** Physics, Fundamentals of Mathematics and Electrical Engineering.

<b>Credits:</b>	L	T	P
	0	0	3

**Class schedule per week:** 3

**Course Overview:** Concepts of measuring instruments, AC RLC series parallel circuit operation, resonance, KVL and KCL, circuit theorems, 3-phase star and delta connections, measurement of low and high resistance of D.C. machine, measurement of power by three voltmeter, three-ammeter methods, measurement of power of 3-phase induction motor by two-wattmeter method.

### Course Objectives

This course enables the students :

A.	To describe students practical knowledge of active and passive elements and operation of measuring instruments
B.	To demonstrate electrical circuit fundamentals and their equivalent circuit models for both 1- $\phi$ and 3- $\phi$ circuits and use circuit theorems
C.	To establish voltage & current relationships with the help of phasors and correlate them to experimental results
D.	1. To conclude performance of 1 – $\Phi$ AC series circuits by resonance phenomena 2. To evaluate different power measurement for both 1- $\phi$ and 3- $\phi$ circuits

### Course Outcomes

After the completion of this course, students will be able to:

1.	classify active and passive elements, explain working and use of electrical components, different types of measuring instruments;
2.	illustrate fundamentals of operation of DC circuits, 1- $\phi$ and 3- $\phi$ circuits and also correlate the principles of DC, AC 1- $\phi$ and 3- $\phi$ circuits to rotating machines like Induction motor and D.C machine.;

3.	measure voltage, current, power, for DC and AC circuits and also represent them in phasor notations;
4.	analyse response of a circuit and calculate unknown circuit parameters;
5.	recommend and justify power factor improvement method in order to save electrical energy.

## **SYLLABUS**

### **LIST OF EXPERIMENTS :**

**1. Name: Measurement of low & high resistance of DC shunt motor**

Aim: (i) To measure low resistance of armature winding of DC shunt motor  
(ii) To measure high resistance of shunt field winding of DC shunt motor

**2. Name: AC series circuit**

Aim: (i) To obtain current & voltage distribution in AC RLC series circuit and to draw phasor diagram  
(ii) To obtain power & power factor of single phase load using 3- Voltmeter method and to draw phasor diagram

**3. Name: AC parallel circuit**

Aim: (i) To obtain current & voltage distribution in AC RLC parallel circuit and to draw phasor diagram  
(ii) To obtain power & power factor of single phase load using 3- Ammeter method and to draw phasor diagram

**4. Name: Resonance in AC RLC series circuit**

Aim : (i) To obtain the condition of resonance in AC RLC series circuit  
(ii) To draw phasor diagram

**5. Name: 3 phase Star connection**

Aim : (i) To establish the relation between line & phase quantity in 3 phase star connection  
(ii) To draw the phasor diagram

**6. Name: 3 phase Delta connection**

Aim : (i) To establish the relation between line & phase quantity in 3 phase delta connection  
(ii) To draw phasor diagram

**7. Name: 3 phase power measurement**

Aim : (i) To measure the power input to a 3 phase induction motor using 2 wattmeter method  
(ii) To draw phasor diagram

**8. Name: Self & mutual inductance**

Aim : To determine self & mutual inductance of coils

**9. Name: Verification of Superposition, Thevenin's and Reciprocity theorem**

Aim : (i) To verify Superposition theorem for a given circuit

(ii) To verify Thevenin's theorem for a given circuit

**10. Name: Verification of Norton's, Tellegen's and Maximum Power transfer theorem**

Aim : (i) To verify Norton's theorem for a given circuit

(ii) To verify Maximum Power transfer theorem for a given circuit

**Gaps in the syllabus (to meet Industry/Profession requirements)**

1. Application of principles of magnetic circuits to electrical machines like transformers, generators and motors
2. Visualize Phase sequence

**POs met through Gaps in the Syllabus :a, b, c, g****Topics beyond syllabus/Advanced topics/Design**

1. Assignment : Simulation of electrical circuits with dependent/independent sources by various techniques (Mesh current/Node Voltage/Thevenin's theorem/Norton's theorem/Maximum power transfer theorem etc.) using MATLAB/PSIM/C++ softwares
2. Active/reactive power calculation for 3 –  $\Phi$  circuits

**POs met through Topics beyond syllabus/Advanced topics/Design: e,f, i, j, k****Mapping of lab experiment with Course Outcomes**

## COURSE INFORMATION SHEET

**Course code:** EC204

**Course title:** Digital System design Lab

**Pre-requisite(s):** EC101 Basics of Electronics & Communication Engineering

**Co- requisite(s):**

**Credits:** L:0 T:0 P:3 C:1.5

**Class schedule per week:** 03

**Class:** B. Tech

**Semester / Level:** III/ 02

**Branch:** ECE

**Name of Teacher:**

### Course Objectives

This course enables the students to:

1.	Understand the basics of logic gates, input, output, power supply and gates IC's.
2.	Apply the knowledge of digital electronics to construct combinational and sequential circuits.
3.	Analyse controlled digital circuits with different Boolean function.
4.	Evaluate combinational/sequential circuits and memories.
5.	Translate real world problems into digital logic formulations using VHDL.

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Describe the knowledge of basic logic gates and their design using universal gates.
CO2	Demonstrate the working of combinational and sequential circuits.
CO3	Integrate and experiment with controlled digital circuits.
CO4	Appraise combinational/sequential circuits and memories.
CO5	Schematize, simulate and implement combinational and sequential circuits to solve real world problems using VHDL systems.

## **SYLLABUS**

### **List of experiments:**

1. Design and implement a controlled CMOS Inverter.
2. To study and verify the truth table of NAND and EX-OR gate using IC 7400.
3. Design and implement SEVEN segment display unit.
4. Design and verify half adder and full Adder circuits using gates and IC 7483.
5. Design and implement a 3:8 Decoder.
6. Design and implement 8:3 priority encoder.
7. Design a 4 bit magnitude comparator using combinational circuits.
8. Design and implement 8:1 multiplexer and 1:4 demultiplexer.
9. Design ALU with functions of ADD, SUB, INVERT, OR, AND, XOR, INC, DEC and CMP.
10. Design and verify decade Counter.
11. Design a ROM (8X4) using decoder, gates and diodes.
12. Design of pre settable up/down counter.

**## Implement all the above experiments using VHDL platform and verify.**

### **Books recommended:**

#### **Textbooks:**

**COURSE INFORMATION SHEET**

Course code: CS202

Course title: **Data Structures Lab**

Pre-requisite(s):

Co- requisite(s):

Credits: L: 0 T: 0 P: 3

Class schedule per week: 3

Class: B. Tech

Semester / Level: II

Branch: All

### Course Objectives

This course enables the students:

A.	To assess how the choice of data structures and algorithm design methods impact the performance of programs.
B.	To choose the appropriate data structure and algorithm design method for a specified application.
C.	To solve problems using data structures such as linear lists, stacks, queues, hash tables, binary trees, heaps, binary search trees, and graphs and writing programs for these solutions.
D.	Analyse and compare the different algorithms

### Course Outcomes

After the completion of this course, students will be able to:

1.	Be able to design and analyze the time and space efficiency of the data structure
2.	Analyze run-time execution of previous learned sorting methods, including selection, merge sort, heap sort and Quick sort
3.	Have practical knowledge on the applications of data structures
4.	Be capable to identify the appropriate data structure for given problem

## SYLLABUS

1. Program to Find the Number of Elements in an Array
2. Develop and Implement a menu driven program in C for the following Array operations
  - a. Creating Array of N Integer elements.
  - b. Display of Array elements with suitable headings.
  - c. Inserting an element (ELEM) at a given valid position (POS).
  - d. Deleting an element at a given valid position (POS).
  - e. Exit
3. Programs for Stack, Queues and Circular Queues using Arrays
4. Program to convert an Infix Expression into Postfix and Postfix Evaluation
5. Program to implement stack using arrays
6. Program to implement stack using linked list
7. Program to implement multiple stack in a single array
8. Program to convert infix notation to postfix notation using stacks
9. Program to implement queue using arrays
10. Program to implement queue using pointers

11. Program to reverse elements in a queue
12. Program to implement circular queue using arrays
13. Program to create add remove & display element from single linked list
14. Program to create add remove & display element from double linked list
15. Program to count number of nodes in linear linked list
16. Program to create add remove & display element from circular linked list
17. Programs to implement stack & queues using linked representation
18. Program to concatenate two linear linked lists
19. Program to accept a singly linked list of integers & sort the list in ascending order.
20. Program to reverse linked list
21. Program to represent polynomial using linked list
22. Program to add two polynomials using linked list
23. Program for the creation of binary tree, provide insertion & deletion in c
24. Program for pre-order, post-order & in-order traversals of a binary tree using non recursive.
25. Program to count no, of leaves of binary tree
26. Program for implementation of B-tree (insertion & deletion)
27. Program for implementation of multi-way tree in c
28. Program for implementation of AVL tree
29. Program to implement bubble sort program using arrays
30. Program to implement merge sort using arrays
31. Program to implement selection sort program using arrays
32. Program to implement insertion sort program using arrays
33. Program to implement topological sort using arrays
34. Program to implement heap sort using arrays
35. Program to implement heap sort using pointers
36. Program to implement bubble sort program using pointers
37. Program to implement linear search using pointers
38. Program to implement binary search using pointers
39. Program to implement linear search using arrays
40. Program to implement binary search using arrays

**(Semester IV)****COURSE INFORMATION SHEET**

Course code: MA 203

**Course title: Numerical Methods**

**Pre-requisite(s): NIL**

**Co- requisite(s): ---NIL**

**Credits: L: 2 T: 0 P: 0 C: 2**

**Class schedule per week: 2 Lectures**

**Class: B Tech**

**Semester / Level: 2**

**Branch: ALL**

**Name of Teacher:**

**Course Objectives:** This course enables the students to

1.	derive appropriate numerical methods to solve algebraic and transcendental equations
2.	derive appropriate numerical methods to solve linear system of equations
3.	approximate a function using various interpolation techniques
4.	to find the numerical solution of initial value problems and boundary value problems

**Course Outcomes:** After the completion of this course, students will be able to

CO 1	solve algebraic and transcendental equation using an appropriate numerical method arising in various engineering problems
CO 2	solve linear system of equations using an appropriate numerical method arising in computer programming, chemical engineering problems etc.
CO 3.	Approximate a function using an appropriate numerical method in various research problems
CO 4	evaluate derivative at a value using an appropriate numerical method in various research problems
CO 5	solve differential equation numerically

**Module I: Errors and Nonlinear Equations**

**Error Analysis:** Definition and sources of errors, propagation of errors, floating-point arithmetic

**Solution of Nonlinear equations:** Bisection method, Regula-Falsi method, Secant method, Newton-Raphson method and its variants, General Iterative method. [05L]

**Module II: System of Linear Equations**

Gauss-Elimination, Gauss-Jordan, LU-Decomposition, Gauss-Jacobi and Gauss- Siedel methods to solve linear system of equations and Power method to find least and largest eigenvalues.

[05L]

**Module III: Interpolation**

Lagrange's interpolation, Newton's divided differences interpolation formulas, inverse interpolation, interpolating polynomial using finite differences. [05L]

**Module IV: Differentiation and Integration**

Differentiation using interpolation formulas, Integration using Newton-Cotes formulas: Trapezoidal rule, Simpson's rule [05L]

**Module V: Solution of Ordinary Differential Equations**

Euler's method, modified Euler's method, Runge - Kutta Methods of second and fourth order to solve initial value problems. [05L]

### **COURSE INFORMATION SHEET**

Course code: CE101

Course title: **Environmental Science**

Pre-requisite(s):

Co- requisite(s):

Credits: L: 2 T: 0 P: 0

Class schedule per week: 2

Class: B. Tech

Semester / Level: I

Branch: All

#### **Course Objectives**

This course enables the students:

1	To develop basic knowledge of ecological principles and their applications in environment.
2	To identify the structure and composition of the spheres of the earth, the only planet sustaining life.
3	To analyse, how the environment is getting contaminated and probable control mechanisms for them.
4	To generate awareness and become a sensitive citizen towards the changing environment.

#### **Course Outcomes**

After the completion of this course, students will be:

1	Able to explain the structure and function of ecosystems and their importance in the holistic environment.
---	--

2	Able to identify the sources, causes, impacts and control of air pollution.
3	Able to distinguish the various types of water pollution happening in the environment and understand about their effects and potential control mechanisms.
4	Able to judge the importance of soil, causes of contamination and need of solid waste management.
5	Able to predict the sources of radiation hazards and pros and cons of noise pollution.

## **Syllabus**

### **Module 1. Ecosystem and Environment**

Concepts of Ecology and Environmental science, ecosystem: structure, function and services, Biogeochemical cycles, energy and nutrient flow, ecosystem management, fate of environmental pollutants, environmental status and reports on climate change.

(8L)

### **Module 2: Air Pollution**

Structure and composition of unpolluted atmosphere, classification of air pollution sources, types of air pollutants, effects of air pollution, monitoring of air pollution, control methods and equipment for air pollution control, vehicular emissions and control, indoor air pollution, air pollution episodes and case studies.

(8L)

### **Module 3: Water Pollution**

Water Resource; Water Pollution: types and Sources of Pollutants; effects of water pollution; Water quality monitoring, various water quality indices, water and waste water treatment: primary, secondary and tertiary treatment, advanced treatments (nitrate and phosphate removal); Sludge treatment and disposal.

(8L)

### **Module 4: Soil Pollution and Solid Waste Management**

Lithosphere – composition, soil properties, soil pollution, ecological & health effects, Municipal solid waste management – classification of solid wastes, MSW characteristics, collection, storage, transport and disposal methods, sanitary landfills, technologies for processing of MSW: incineration, composting, pyrolysis.

(8L)

### **Module 5: Noise pollution & Radioactive pollution**

Noise pollution: introduction, sources: Point, line and area sources; outdoor and indoor noise propagation, Effects of noise on health, criteria noise standards and limit values, Noise measurement techniques and analysis, prevention of noise pollution; Radioactive pollution: introduction, sources, classification, health and safety aspects, Hazards associated with nuclear reactors and disposal of spent fuel rods-safe guards from exposure to radiations, international regulation, Management of radioactive wastes.

(8L)

## COURSE INFORMATION SHEET

Course code: CS203

Course title: **Computer Organization Architecture**

Pre-requisite(s): Digital Logic

Co- requisite(s):

Credits: L: 3 T: 1 P: 0

Class schedule per week: 4

Class: B. Tech

Semester / Level: II

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	To understand the basic architecture and organization of systems along with their performances.
2.	To Familiar with Digital Logic circuits, Data representation and Instruction Set Architecture.
3.	To build a complete data path for various instructions.
4.	To understand the pipeline concepts and Hazards.
5.	To familiar with Memory and I/O Organization.

### Course Outcomes

After the completion of this course, students will be to:

1.	Explain the merits and pitfalls in computer performance measurements and analyze the impact of instruction set architecture on cost-performance of computer design
2.	Explain Digital Logic Circuits ,Data Representation, Register and Processor level Design and Instruction Set architecture
3.	Solve problems related to computer arithmetic and Determine which hardware blocks and control lines are used for specific instructions
4.	Design a pipeline for consistent execution of instructions with minimum hazards
5.	Explain memory organization, I/O organization and its impact on computer cost /performance.

## **Basic Structures of Computers**

Introduction to Digital Logic, Basic Structure of Computers: Computer Types, Functional Units, Input Unit, Memory Unit, Arithmetic and Logic Unit, Output Unit, Control Unit, Basic Operational Concepts: Fixed and floating point Representation and Arithmetic Operations, Performance, Historical Perspective. (5L)

## **Module II**

### **Instruction Set Architecture**

Memory Locations and Addresses: Byte Addressability, Big-Endian and Little-Endian Assignments, Word Alignment, Instructions and Instruction Sequencing, Addressing Modes, Assembly Language, Subroutines, Additional Instructions, Dealing with 32-Bit Immediate Values. (5L)

## **Module III**

### **Basic Processing Unit & Pipelining**

**Basic Processing Unit:** Some Fundamental Concepts, Instruction Execution, Hardware Components, Instruction Fetch and Execution Steps, Control Signals, Hardwired Control, CISC-Style Processors.

**Pipelining:** Basic Concept, Pipeline Organization, Pipelining Issues, Data Dependencies, Memory Delays, Branch Delays, Pipeline Performance Evaluation. (10L)

## **Module IV**

### **Memory Organization**

Basic Concepts, Semiconductor RAM Memories, Read-only Memories, Direct Memory Access, Memory Hierarchy, Cache Memories, Performance Considerations, Virtual Memory, Memory Management Requirements, Secondary Storage. (10L)

## **Module V**

### **Input Output & Parallel Processing**

#### **Basic Input Output**

Accessing I/O Devices, Interrupts

#### **Input Output Organization**

Bus Structure, Bus Operation, Arbitration, Interface, Interconnection Standards.

#### **Parallel Processing**

Hardware Multithreading, Vector (SIMD) Processing, Shared-Memory Multiprocessors, Cache Coherence, Message-Passing Multicomputers, Parallel Programming for Multiprocessors, Performance Modeling. (10L)

## **Text Book:**

Patterson David A., Hennessy John L., Computer Organization and Design: The Hardware / Software Interface, 5<sup>th</sup> Edition, Elsevier.(T1)

CO5	3	2	3	3	3	1	2	1	3	1	3	3	3	3	3

Correlation Levels 1, 2 or 3 as defined below:

1: Slight (Low)    2: Moderate (Medium)    3: Substantial (High)

### **MAPPING BETWEEN COURSE OUTCOMES AND COURSE DELIVERY METHOD**

Course Outcomes	Course Delivery Method
CO1	CD1,CD6
CO2	CD1, CD6,CD7
CO3	CD1, CD2, CD3,CD6,CD7
CO4	CD1, CD3,CD6,CD7
CO5	CD1,CD2,CD3,CD4,CD5,CD7

### **COURSE INFORMATION SHEET**

Course code: CS204

Course title: **Object Oriented Programming and Design Patterns**

Pre-requisite(s): Data Structure

Co- requisite(s):

Credits: L: 3 T: 0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: II/2

Branch: CSE/IT

#### **Course Objectives**

This course enables the students:

1.	The course shall allow students to understand the basic tenets of OOP.
2.	The course will exemplify the basic syntax and constructs of JAVA.
3.	The course will help students understand the application OOP principles in various use cases.
4.	The course will explain basic JAVA GUI components and their working.
5.	The course aims to expose students to newer JAVA constructs like NIO, Lambdas etc.

#### **Course Outcomes**

After the completion of this course, students will be:

1.	Identify the difference between procedural and OO programming.
2.	Construct programs using various OOP principles.
3.	Design UI using JAVA GUI components.
4.	Operate on files and strings in real life scenarios.

## **SYLLABUS**

### **Module I**

#### **Introduction to Classes, Objects and Java**

Introduction to Object Technology, Java, Understanding the Java development environment, Programming in Java, Memory concepts, Doing basic Arithmetic, Comparing entities, Classes, Objects, Methods, Strings, Primitive vs reference types.

(8L)

### **Module II**

#### **Control Statements, Methods and Arrays**

Basic selection statements, Iterative constructs, Relative and Logical operators, break, continue, Methods, static methods, parameter passing, argument promotion and casting, scopes, method overloading. Arrays and ArrayList in Java, Enhanced for statement, Passing arrays to methods, Multidimensional arrays, Using command line arguments.

(8L)

### **Module III**

#### **Object Oriented Concepts: Polymorphism & Inheritance**

Controlling access to class members, the use of this keyword, getters and setters, Composition, enum, the use of static and final, Garbage collection. Superclass and subclass, protected members, constructors in subclass, the Object class, Introduction to polymorphism, Abstract classes and methods, Assignment between subclass and superclass variables, Creating and using interfaces.

(8L)

### **Module IV**

#### **Exception Handling & GUI Design**

When to use exception handling, Java exception hierarchy, finally block, Stack unwinding, Chained exceptions, Declaring new exception types, Assertions, try with resources. Simple I/O with GUI, Basic GUI Components, GUI Event handling, Adapter classes, Layout managers, Using panels.

(8L)

### **Module V**

#### **Strings, characters & Files**

Working with the String and StringBuilder class, Character class, Tokenizing strings, Regular Expressions, Files and Streams, Using NIO classes, Sequential file handling, Object serialization,

JFileChooser, Introduction to threading, Introduction to Generics and lambda expressions.  
(8L)

## COURSE INFORMATION SHEET

Course code: CS206

Course title: **Design and Analysis of Algorithm**

Pre-requisite(s): Data Structure

Co- requisite(s): Algorithms Lab

Credits: L: 3 T: 0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: II/2

Branch: CSE/IT

### Course Objectives

This course enables the students to:

1.	To analyze the performance of recursive and non-recursive algorithms.
2.	To understand various algorithm design techniques.
3.	To use of different paradigms of problem solving.
4.	To find efficient ways to solve a given problem.
5.	To compare various algorithms of a given problem.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Define the concepts and mathematical foundation for analysis of algorithms.
2.	Explain different standard algorithm design techniques, namely, divide & conquer, greedy, dynamic programming, backtracking and branch & bound.
3.	Demonstrate standard algorithms for fundamental problems in Computer Science.
4.	Design algorithms for a given problem using standard algorithm design techniques.
5.	Analyze and compare the efficiency of various algorithms of a given problem.

## **SYLLABUS**

### **Module I**

#### **Algorithms and Complexity**

Introduction, Algorithm Complexity and various cases using Insertion Sort, Asymptotic Notations, Time complexity of Recursive Algorithm, Solving Recurrences using Iterative, Recursion Tree and Master Theorem. (8L)

### **Module II**

#### **Divide and Conquer**

Discussion of basic approach using Binary Search, Merge Sort, Quick Sort, Selection in Expected linear time, Maximum Subarray, Matrix Multiplication, Introduction of Transform and Conquer and AVL Tree. (8L)

### **Module III**

#### **Dynamic Programming**

Introduction and Approach, Rod Cutting, LCS, Optimal BST, Transitive closure and All-pair Shortest Path, Travelling Salesperson Problem. (8L)

### **Module IV**

#### **Greedy and other Design Approaches**

Introduction to greedy using fractional knapsack, Huffman Code, Minimum Spanning Tree – Prim and Kruskal, Single Source Shortest Path Dijkstra's and Bellman-Ford, Introduction to Backtracking using N-Queens problem, Introduction to Branch and Bound using Assignment Problem or TSP. (8L)

### **Module V**

#### **NP Completeness and Other Advanced Topics**

Non-deterministic algorithms – searching and sorting, Class P and NP, Decision and Optimization problem, Reduction and NPC and NPH, NP Completeness proof for: SAT, Max-Clique, Vertex Cover, Introduction to Randomized Algorithms, Introduction to Approximation Algorithms. (8L)

#### **Text Book:**

## **COURSE INFORMATION SHEET**

Course code: CS211

Course title: **Operating System**

Pre-requisite(s): Data Structure, Computer System Architecture, Basic Course on Computer Programming

Co- requisite(s): None

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: BTech

Semester / Level: V

Branch: CSE/IT

### **Course Objectives**

This course enables the students to:

1.	Present the main components of OS and their working
2.	Introduce the concepts of process and thread and their scheduling policies
3.	Handling synchronization of concurrent processes and deadlocks
4.	Analyze the different techniques for managing memory, I/O, disk and files
5.	Design the components of operating system

### **Course Outcomes**

After the completion of the course student will be able to:

1.	Describe the main components of OS and their working
2.	Explain the concepts of process and thread and their scheduling policies
3.	Solve synchronization and deadlock issues
4.	Compare the different techniques for managing memory, I/O, disk and files
5.	Design components of operating system

## **Syllabus**

### **Module I**

[8L]

**Operating system Overview**

Operating system Objective and Functions, Evolution of Operating System, Major Advances in OS Components, Characteristics of Modern Operating Systems

**Process Description and Control**

Process Concept, Process States, Process Description, Process Control, Threads, Types of Threads, Multicore and Multithreading

**Module II****[8L]****Scheduling**

Type of scheduling, Uniprocessor Scheduling, Multiprocessor Scheduling

**Module III****[8L]****Concurrency****Mutual Exclusion and Synchronization**

Principle of Concurrency, Mutual Exclusion, Hardware Support, Semaphores, Monitors, Message Passing, Readers/Writers Problem

**Deadlock and Starvation**

Principle of Deadlock, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Dining Philosopher Problem

**Module IV****[8L]****Memory Management**

Memory Management Requirements, Memory Partitioning, Paging, Segmentation

**Virtual Memory**

Hardware and Control Structures, Operating System Policies for Virtual Memory

**Module V****[8L]****I/O Management and Disk Scheduling**

I/O device, Organization of the I/O Function, Operating System Design Issues, I/O Buffering, Disk Scheduling, RAID, Disk Cache

**File Management**

Overview, File Organization and Access, File Directories, File Sharing, Record Blocking, File Allocation and Free Space Management

### **Course Objectives**

This course enables the students to understand

1.	derive appropriate numerical methods to solve algebraic, transcendental equations and linear system of equations
2.	approximate a function using various interpolation techniques, to find the numerical solution of initial value problems
3.	concepts in probability theory, the properties of probability distributions
4.	estimation of mean, variance and proportion, the concepts of statistical hypothesis

### **Course Outcomes**

After the completion of this course, students will be able to

1.	solve algebraic, transcendental equation and linear system of equations using an appropriate numerical method arising in various engineering problems
----	---

2.	evaluate derivative at a value using an appropriate numerical method in various research problems, solve differential equation numerically
3.	learn basic probability axioms, rules and the moments of discrete and continuous random variables as well as be familiar with common named discrete and continuous random variables.
4.	find the point and interval estimates, analyse data statistically and interpretation of the results

## Syllabus

### List of Assignments

1. Find a simple root of  $f(x)=0$  using bisection method. Read the end points of the interval  $(a,b)$  in which the root lies, maximum number of iterations  $n$  and error tolerance eps.
2. Find a simple root of  $f(x)=0$  using Regula-Falsi method. Read the end points of the interval  $(a,b)$  in which the root lies, maximum number of iterations  $n$  and error tolerance eps.
3. Find a simple root of  $f(x)=0$  using Newton Raphson method. Read any initial approximation  $x_0$ , maximum number of iterations  $n$  and error tolerance eps.
4. Solution of a system of  $n \times n$  linear equations using Gauss elimination method with partial pivoting. The program is for  $10 \times 10$  system or higher order system.
5. Matrix inversion and solution of  $n \times n$  system of equations using Gauss-Jordan method. If the system of equations is larger than  $15 \times 15$  change the dimensions of the float statement.
6. Program to solve a system of equation using Gauss-Seidel iteration method. Order of the matrix is  $n$ , maximum number of iterations  $niter$ , error tolerance is eps and the initial approximation to the solution vector is  $x_0$ . If the system of equations is larger than  $10 \times 10$  change the dimension in float.
7. Program to find the largest Eigen value in magnitude and the corresponding Eigen vector of a square matrix  $A$  of order  $n$  using power method.
8. Program for Lagrange interpolation.
9. Program for Newton divided difference interpolation.
10. Program for Newton's forward and backward interpolation.
11. Program for Gauss's central difference interpolation (both backward and forward).
12. Program to evaluate the integral of  $f(x)$  between the limits  $a$  to  $b$  using Trapezoidal rule of integration based on  $n$  subintervals or  $n+1$  nodal points. The values of  $a, b$  and  $n$  are to be read. The program is tested for  $f(x)=1/(1+x)$ .
13. Program to evaluate the integral of  $f(x)$  between the limits  $a$  to  $b$  using Simpson's rule of integration based on  $2n$  subintervals or  $2n+1$  nodal points. The values of  $a, b$  and  $n$  are to be read and the integrand is written as a function subprogram. The program is tested for  $f(x)=1/(1+x)$ .
14. Program to solve an IVP,  $dy/dx=f(x), y(x_0)=y_0$  using Euler method. The initial value  $x_0, y_0$  the final value  $x_f$  and the step size  $h$  are to be read. The program is tested for  $f(x,y)=-2xy^2$ .
15. Program to solve an IVP,  $dy/dx=f(x), y(x_0)=y_0$  using the classical Runge-Kutta fourth order

method with step size  $h$ ,  $h/2$  and also computes the estimate of the truncation error. Input parameters are: initial point, initial value, number of intervals and the step length  $h$ . Solutions with  $h$ ,  $h/2$  and the estimate of the truncation error are available as output. The right hand side The program is tested for  $f(x, y) = -2xy^2$ .

Course code: IT202

Course title: **Basic IT Workshop**

Pre-requisite(s):

Co- requisite(s):

Credits: L: 0 T: 0 P: 2

Class schedule per week: 2

Class: B. Tech

Semester / Level: IV/II

Branch: All

#### **Course Objectives**

This course enables the students:

1.	Understand and use the basic Matlab functions and understand its environment and variables
----	--

2.	Know about handling operations and advanced features like menus and toolbars
3.	Implement programs with the use of arrays, strings and graphical data representations
4.	Understand Python, Data Types, Operators, Arrays
5.	Implement Functions and loops, object oriented programming using Python

## Course Outcomes

After the completion of this course, students will be able:

1.	Apply features of Matlab and algorithms to solve problems
2.	Develop application programs with the help of various tool boxes available in Matlab.
3.	Apply data analysis through graphical data representations
4.	Implement programs with the use of arrays, strings in Matlab
5.	Implement Functions and loops, using Python

## Syllabus

### Module I

#### Introduction to MATLAB and Basics Part I:

Introduction, Advantage, Disadvantage of MATLAB, MATLAB Environment, Variables and Array, Built-in Functions of MATLAB, Subarrays, Multidimensional Arrays, Data Files.

### Module II

#### MATLAB Basic Part II:

Scalar and Array Operations, Hierarchy of Operations, Introduction to Plotting, Polar Plots, Subplots, MATLAB profiler. String Functions, Complex Data, Three-Dimensional Plot

### Module III

#### MATLAB Advanced Features:

Sparse Arrays, Cell Arrays, Structure Arrays, I/O Functions, Object Handles, Position and Units, Graphical User Interface: Dialog Boxes, Menus, Toolbars.

### Module IV

#### Introduction to Python Basics

Basics, Python, Data Types, Operators, Arrays, Plotting

### Module V

#### Python Programming Part 2:

Functions and loops, object oriented programming, Numerical Formalism

Sample list of Assignments:

### **Sample Assignments on Python**

#### **Data Types, Input- Outputs, Variables**

1. Write a program in Python to swap two variables.
2. Write a program in Python to check the input character is an alphabet or not.

#### **Loop**

3. Write a program in python to shuffle a deck of card using the module random and draw 5 cards.
4. Write a program in python to find the factors of a number.

#### **Array and Lists**

5. Write a program in python to transpose a given matrix  $M = \begin{bmatrix} 1 & 2 \\ 4 & 5 \\ 3 & 6 \end{bmatrix}$ .
6. Write a program in python to print the median of a set of numbers in a file.

#### **Function**

6. Write a function in Python to find the resolution of a JPEG image.
7. Write a program in python and use in-built functions to convert a decimal number to binary, octal and hexadecimal number.
8. Write a program in python to sort words in alphabetical order.

#### **Plot**

9. Use Matplotlib to draw histogram to represent average age of population given as Age [21, 54, 66, 44, 32, 42, 54, 62, 93, 45, 32, 70]
10. Create a 3-D plot in Python for the function  $\sqrt{y^2 - x^2}$  over the interval  $-3 \leq x \leq 3$  and  $-3 \leq y \leq 3$ .

### **Sample Assignments on MATLAB**

#### **Assignment Statements:**

1. Given two sides  $a = 3.2$  and  $b = 4.6$  of a triangle and angle  $\theta = 60^\circ$  between these two sides. Find the length of the third side and the area of the triangle.
2. Write a MATLAB statement to calculate the sum of the series:

$$S = 1 - x^2/2! + x^4/4! - x^6/6! + x^8/8! \quad \text{for } x = 1.5$$

### Arrays

3. The array A is given below. Extend the 2-D array to 3-D array by including another 2-D array as second element in the third dimension.

$$A = 123; 543; 136;$$

4. Let a matrix A of size (3x4) is defined as,  $A = \begin{bmatrix} 12356791011 & 4812 \end{bmatrix}$ . Reshape the matrix A into matrix B of the size (6x2).

5. Let a column vector z be given as  $z = [2; 3; 4; 5]$ .

(i) Form a diagonal matrix A, using the elements of z as the main diagonal elements of A.

(ii) Form the matrix B, using the elements of vector z as elements of upper diagonal of B.

(iii) Form the matrix C, using the elements of vector z as elements of first lower diagonal of C.

### Polynomials

6. Integrate the polynomial  $y = 4x^3 + 12x^2 + 16x + 1$ . Take the constant of integration as 3.

7. Find the polynomial of degree 2 to fit the following data:

x	0	1	2	4
y	1	6	20	100

### Input-Output statement and files

8. Write a program in MATLAB to illustrate the use of 'pause' command.

9. Write a program in MATLAB to illustrate the use of fwrite function for writing binary data of different formats to a file named 'check.txt'.

### Plots

10. Plot the curve given by the equation  $y = \sin(x)$  where x varies from 0 to  $2\pi$ . Also label the x-axis and y-axis and provide a suitable title for the plot.

11. Plot a bar graph for the data given as  $x = [1 \ 2 \ 3 \ 4 \ 5 \ 6]$  and  $y = [10 \ 15 \ 25 \ 30 \ 27 \ 19]$

12. Given  $x = t^2$  and  $y = 4t$  for  $-4 < t < 4$ . Using MATLAB obtain a 3-D plot showing the matrix in (x, y) space as a function of time.

### Control structures

13. Write a program in MATLAB to find the count of even values in the given n numbers.

## Functions

14. Write a function in MATLAB to calculate the roots of the quadratic equation  $ax^2 + bx + c = 0$ , where a, b, c are constants.

Semester / Level: IV/II

Branch: CSE/IT

### Course Objectives

This course enables the students to:

1.	To introduce the student with fundamentals and features of Object Oriented programming.
2.	To be able to write a Java program to solve a well specified problem
3.	To be able to describe, recognize, apply and implement selected design patterns in Java

4.	To be familiar with common errors in Java and its associated libraries
5.	To understand a Java program written by someone else and be able to debug and test the same.

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Work in any object oriented environment and program using those features.
CO2	Student will have hands on experience with all basic concepts of Java programming
CO3	Analyse the design pattern of the given problem and further solve with less complexity.
CO4	Use his/her programming skills to resolve the issues coming while programming for bigger problems.
CO5	Work in industry environment with good enough knowledge about Java and OOPs.

### Syllabus

#### List of Programs as Assignments:

##### 1. Lab Assignment No: 1

Objective: To understand and Implement basic java program concepts using Scanner class.

Q1. Take input from user a character variable in a program and if the value is alphabet then print "Alphabet" if it's a number then print "Digit" and for other characters print "Special Character"

Q2. Write a program to add all the values in a given number and check if the sum is prime number or not. Ex: 1234->10, not prime.

##### 2. Lab Assignment No: 2

Objective: To Understand and Implement the concept of arrays in java

Q1. Write a program to find the largest 2 numbers and the smallest 2 numbers in the array initialized by the user.

Q2. Write a program to print the element of an array that has occurred the highest number of times  
Eg) Array -> 10,20,10,30,40,100,99 O/P:10

##### 3. Lab Assignment No: 3

Objective: To Understand and Implement the concept of 2-D arrays in java.

Q1. Write a program to reverse the elements of a given 2\*2 array. Four integer numbers needs to be passed as Command Line arguments

Eg: C:\>java Sample 1 2 3 4

O/P Expected :

The given array is : 1 2

3 4

The reverse of the array is : 4 3

2 1

Q2. Write a program to find greatest number in a 3\*3 array. The program is supposed to receive 9 integer numbers as command line arguments.

#### **4. Lab Assignment No: 4**

Objective: To Understand and Implement the concept of classes and Constructors

Q1. Create a class Box that uses a parameterized constructor to initialize the dimensions of a box.(dimensions are width, height, depth of double type). The class should have a method that calculates and returns the volume of the box . Obtain an object and print the corresponding volume in main() function.

Q2. Write a program in Java with class Rectangle with the data fields width, length, area and color. The length, width and area are of double type and color is of string type. The methods are set\_length() , set\_width() , set\_color(), and find\_area(). Create two object of Rectangle and compare their area and color. If area and color same for the objects then display “Matching Rectangles” otherwise display “Non Matching Rectangle”.

#### **5. Lab Assignment No: 5**

Objective: To Understand and Implement the concept of Inheritance

Q1.Create a class named ‘Animal’ which includes methods like eat() and sleep(). Create a child class of Animal named ‘Bird’ and override the parent class methods. Add a new method named fly(). Create an instance of Animal class and invoke the eat and sleep methods using this object.Create an instance of Bird class and invoke the eat, sleep and fly methods using this object.

Q2. A HighSchool application has two classes: the Person superclass and the Student subclass. Using inheritance, in this lab you will create two new classes, Teacher and CollegeStudent. A Teacher will be like Person but will have additional properties such as salary (the amount the teacher earns) and subject (e.g. “Computer Science”, “Chemistry”, “English”, “Other”). The CollegeStudent class will extend the Student class by adding a year (current level in college) and major (e.g. “Electrical Engineering”, “Communications”, “Undeclared”).

#### **6. Lab Assignment No: 6**

Objective: To Understand and Implement the concept of Overloading and Overriding

Q1.Create a class Account with two overloaded constructors. First constructor is used for initializing, name of account holder, account number and initial amount in account. Second constructor is used for initializing name of account holder, account number, address, type of account and current balance. Account class is having methods Deposit(), Withdraw(), and GetBalance().Make necessary assumption for data members and return types of the methods. Create objects of Account class and use them.

Q2. Create a base class Fruit which has name ,taste and size as its attributes. A method called eat() is created which describes the name of the fruit and its taste. Inherit the same in 2 other class Apple and Orange and override the eat() method to represent each fruit taste.

#### **7. Lab Assignment No: 7**

Objective: To Understand and Implement String class in Java

Q1. Reverse the string but not the words. Eg. I/P: Birla institute of technology

O/P: technology of institute birla.

Q2. Find out and print the maximum possible palindrome in a given string. Eg:

I/P: nonsensene O/P: nonon

Q3. Given a string and a non-empty word string, return a string made of each char just before and just after every appearance of the word in the string. Ignore cases where there is no char before or after the word, and a char may be included twice if it is between two words.

If inputs are "abcXY123XYijk" and "XY", output should be "c13i".

If inputs are "XY123XY" and "XY", output should be "13".

### **8. Lab Assignment No: 8**

Objective: To Understand and Implement the concept of Abstract classes and Interfaces

Q1. Create an abstract class Compartment to represent a rail coach. Provide an abstract function notice in this class. Derive FirstClass, Ladies, General, Luggage classes from the compartment class. Override the notice function in each of them to print notice suitable to the type of the compartment. Create a class TestCompartment. Write main function to do the following: Declare an array of Compartment of size 10. Create a compartment of a type as decided by a randomly generated integer in the range 1 to 4. Check the polymorphic behavior of the notice method.

Q2. Write a program in java which implement interface Student which has two methods Display\_Grade and Attendance for PG\_Students and UG\_Students (PG\_Students and UG\_Students are two different classes for Post Graduate and Under Graduate Students respectively).

### **9. Lab Assignment No: 9**

Objective: To Understand and Implement Exception handling in java

Q1. Write a program in Java to display name and roll number of students. Initialize respective array variables for 10 students. Handle ArrayIndexOutOfBoundsException, so that any such problem does not cause illegal termination of program.

Q2. Write a program to accept name and age of a person from the command prompt (passed as arguments when you execute the class) and ensure that the age entered is  $\geq 18$  and  $< 60$ . Display proper error messages. The program must exit gracefully after displaying the error message in case the arguments passed are not proper. (Hint : Create a user defined exception class for handling errors.)

### **10. Lab Assignment No: 10**

Objective: To Understand and Implement File Handling and multithreading in java

Q1. Write a program to count the number of times a character appears in the File and also copy from one file to another. (Case insensitive... 'a' and 'A' are considered to be the same)

Q2. 1. Create class of SalesPersons as a thread that will display five sales persons name. 2. Create a class as Days as other Thread that has array of seven days.

3. Call the instance of SalesPersons in Days and start both the threads 4. suspendSalesPersons on Sunday and resume on wednesday Note: use suspend, resume methods from thread

Q3. Create two threads, one thread to display all even numbers between 1 & 20, another to display odd numbers between 1 & 20. Note: Display all even numbers followed by odd numbers Hint: use join

### **11. Lab Assignment No: 11**

Objective: To Understand and Implement Applets, AWT and Swings

Q1. Program to create a calculator with the help of AWT packages in Java.

Q2. Program to create a unit converter using Swings in Java.

Q3. APPLETs

a) Working with Frames and various controls.

b) Working with Dialogs and Menus.

c) Working with Panel and Layout.

d) Incorporating Graphics.

e) Working with colors and fonts.

### **COURSE INFORMATION SHEET**

**Course code:** CS212

**Course title:** Operating System Lab

**Pre-requisite(s):**

**Co- requisite(s):**

**Credits:**     L: 0    T: 0    P: 3

**Class schedule per week:** 3

**Class:** B. Tech

**Semester / Level:** III

**Branch:** CSE/IT

#### **Course Objectives**

This course enables the students to:

1.	Gain practical experience with designing and implementing concepts of operating systems such as system calls.
----	---

2.	Implement and develop CPU scheduling.
3.	Implement and understand process management, memory management.
4.	To provide a foundation in use of file systems and deadlock handling using C language in Linux environment.

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Understand and implement basic services and functionalities of the operating system using system calls. .
CO2	Use modern operating system calls and synchronization libraries in software/ hardware interfaces.
CO3	Understand the benefits of thread over process and implement synchronized programs using multithreading concepts.
CO4	Analyze and simulate CPU Scheduling Algorithms like FCFS, Round Robin, SJF, and Priority.
CO5	Implement memory management schemes and page replacement schemes.

## SYLLABUS

### List of Programs as Assignments:

#### 1. Lab Assignment No: 1

Objective: To Understand and Implement Directory Structure

Q1. WAP to create a File directory system.

#### 2. Lab Assignment No: 2

Objective: To Understand and Implement Scheduling processes

Q1. WAP to schedule various processes

#### 3. Lab Assignment No: 3

Objective: To Understand and Implement FCFS

Q1. WAP to implement FCFS CPU Scheduling

#### 4. Lab Assignment No: 4

Objective: To Understand and Implement SJF

Q1. WAP to implement SJF CPU scheduling.

#### 5. Lab Assignment No: 5

Objective: To Understand and Implement SRTF

Q1.WAP to implement SRTF CPU scheduling.

#### 6. Lab Assignment No: 6

Objective: To Understand and Implement Scheduling algorithms

Q1. WAP to implement Round Robin Scheduling

**7. Lab Assignment No: 7**

Objective: To Understand and Implement Scheduling algorithms

Q1 WAP to implement SRTF scheduling .

**8. Lab Assignment No: 8**

Objective: To Understand and Implement context switching

Q1. WAP to implement Round Robin Scheduling with context switching.

**9. Lab Assignment No: 9**

Objective: To Understand and Implement context switching.

Q1.WAP to implement SRTF with context switching.

**10. Lab Assignment No: 10**

Objective: To Understand and Implement Page Replacement Techniques

Q1. WAP to implement FCFS page replacement algorithm.

Q2. WAP to implement Optimal page replacement algorithm.

**Books recommended:**

### **COURSE INFORMATION SHEET**

Course code: CS207

Course title: **Design of Algorithm Lab**

Pre-requisite(s):  
Co- requisite(s):  
Credits: L: 0 T: 0 P: 3  
Class schedule per week: 3  
Class: B. Tech  
Semester / Level: II  
Branch: CSE/IT

### Course Objectives

After the completion of this course, students will be able to:

1.	Able to implement various design strategies of algorithms
2.	Able to examine the efficiency of algorithm by changing the places of important steps.
3.	Able to compare approximate and exact solutions.
4.	Able to investigate effect randomness on correctness and efficiency of algorithms.
5.	Able to design approximate, random and parallel solution of different problems.

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Able to know the different notions of asymptotic complexity and determine the asymptotic complexity of algorithms including the solving of recurrence relations.
CO2	Able to determine the practical implications of asymptotic notations.
CO3	Able to Implement, analyze, and compare algorithms.
CO4	Able to Know the difference between the dynamic programming concept and a greedy approach.
CO5	Able to know and use basic and advanced graph algorithms including DFS, BFS, and Bellman Ford.

### Syllabus

#### List of Programs as Assignments:

1. **Lab Assignment No: 1**

Programs on Polynomial vs logarithmic running times

**Lab Assignment No: 2**

Programs on Divide-and-conquer algorithms

2. **Lab Assignment No: 3**

Programs on Greedy and dynamic-programming algorithms

3. **Lab Assignment No: 4**

Programs on Binary trees

4. **Lab Assignment No: 5**

Programs on Heaps and priority queues

### **5. Lab Assignment No: 7**

Programs on Binary search trees

### **6. Lab Assignment No: 8**

Programs on Hash tables

### **7. Lab Assignment No: 9**

Programs on Graph traversal

### **8. Lab Assignment No: 10**

Programs on Shortest paths in graphs.

### **Books recommended:**

### **Text Books:**

1. Thomas H Cormen, Charles E Lieserson, Ronald L Rivest and Clifford Stein, Introduction to Algorithms, Second Edition, MIT Press/McGraw-Hill, 2001. **(T1)**

### **(Semester V)**

#### **COURSE INFORMATION SHEET**

Course code: IT301  
 Course title: **Data Communication & Computer Network(DCCN)**  
 Pre-requisite(s):  
 Co- requisite(s):  
 Credits: L:3 T:1 P:0  
 Class schedule per week: 4  
 Class: B. Tech  
 Semester / Level: III  
 Branch: CSE/IT

## Course Objectives

This course enables the students to:

1.	Study the components of the data communication model and communications architecture.
2.	Understand the differences and similarities between the OSI model and the TCP model.
3.	Understand the fundamentals of the theory of signalling.
4.	Understand the basic principles of signal encoding techniques, error-detection, and error-correction techniques.
5.	Understand the characteristics of analog signaling and digital signaling and the strengths and weaknesses of each method.

## Course Outcomes

After the completion of this course, students will be able to:

1.	Identify the elements of a communication network.
2.	Illustrate different data communications and networking standards.
3.	Design and implement a simple LAN and a WAN that meet a specific set of criteria.
4.	Identify the new trends and technologies, their potential applications.
5.	Examine the social impact of the networking technology particularly on issues related to security and privacy.

## Syllabus

### Module I

#### Data Communications and Networking Overview

A Communications Model, Data Communications, Data Communication Networking, The Need for Protocol Architecture, A Simple Protocol Architecture, OSI, The TCP/IP Protocol Architecture, Data Transmission Concepts and Terminology, Analog and Digital Data Transmission, Transmission Impairments, Channel Capacity. (8L)

### Module II

**Transmission Media and Signal Encoding Techniques:** Guided Transmission Media, Wireless Transmission, Wireless Propagation, Line-of-Sight Transmission. Digital Data Digital Signals, Digital Data Analog Signals, Analog Data Digital Signals, Analog Data Analog Signals. (8L)

### Module III

**Digital Data Communication Techniques and Data Link Control:** Asynchronous and Synchronous Transmission, Types of Errors, Error Detection, Error Correction, Line Configurations, Interfacing, Flow Control, Error Control, High-Level Data Link Control (HDLC). (8L)

### Module IV

**Multiplexing, Circuit Switching and Packet Switching Multiplexing**

Frequency Division Multiplexing, Synchronous Time Division Multiplexing, Statistical Time Division Multiplexing, Switching Networks, Circuit-Switching Networks, Circuit-Switching Concepts, Control Signaling, Soft switch Architecture, Packet-Switching Principles, X.25, and Frame Relay. (8L)

#### **Module V**

##### **Asynchronous Transfer Model**

Protocol Architecture, ATM Logical Connections, ATM Cells, Transmission of ATM Cells, ATM Service Categories, ATM Adaptation Layer.

##### **Routing in Switched Networks**

Routing in Circuit-Switching Networks, Routing in Packet-Switching Networks, Least-Cost Algorithms. (8L)

#### **Text Book:**

Stallings W., Data and Computer Communications, 10<sup>th</sup>Edn., Pearson Education, PHI, New Delhi, 2014.(T1)

## **COURSE INFORMATION SHEET**

Course code: CS301

Course title: **Database Management System (DBMS)**

Pre-requisite(s): Data Structures.

Co- requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### **Course Objectives**

This course enables the students to:

1.	Understand the fundamental concepts, historical perspectives, current trends, structures, operations and functions of different components of databases.
2.	Recognize the importance of database analysis and design in the implementation of any database application.
3.	Describe the role of transaction processing in a database system.
4.	Understand various concurrency control mechanisms for a database system.
5.	Describe the roles of recovery and security in a database system.

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Analyze data organization requirements and their inter relationships.
2.	Illustrate the features of data models and their application for storing data.
3.	Design queries to maintain and retrieve useful information from the databases created.
4.	Analyze the physical database design with respect to their expected performance using normalization and query processing.
5.	Examine the best practices according to concepts of indexing, transaction control and concurrency maintenance

### **Syllabus**

#### **Module I**

#### **Database Design and Entity - Relational Model**

Purpose of Database System; View of Data, Database Languages, Transaction Management, Database architecture, Database Users and Administrator, Types of database System, Overview of

design process, E-R model, Constraints, E–R Diagram, E-R Diagram issues, Weak Entity Sets, Extended E – R Features, Reduction to E–R Schemas. (8L)

## **Module II**

### **Relational Model**

Structure of Relational Database, Codd's Rules, Fundamental Relational Algebra Operations, Additional Relational Algebra Operations, Extended Relational Algebra Operations, Data definition, Basic structure of SQL queries, Set Operations, Aggregate Functions, Null Values, Nested Sub Queries, complex queries, views, modification of database, Joined relations, SQL data types & schemas, Integrity constraints, authorization, Embedded SQL, Triggers. (8L)

## **Module III**

### **Relational Database Design**

Functional dependency, Decomposition, Normalization, First normal form, Second normal form, Third normal form, BCNF, Multivalued dependencies and Fourth normal form, Join dependencies and Fifth normal form, DKNF. (8L)

## **Module IV**

### **Indexing & Hashing**

Ordered Indices, B+ Tree index files, B-Tree index files, Multiple key access Static hashing, Dynamic Hashing, Comparison of ordered indexing and hashing, Index definition in SQL.

### **Query Processing**

Measure of Query Cost, Selection Operation, Evaluation of Expressions. (8L)

## **Module V**

### **Transaction & Concurrency Control**

Transaction Concepts & ACID Properties, Transaction States, Implementation of Atomicity & Durability, Concurrent Executions, Serializability & Its Testing, Recoverability, Lock-Based protocols, Validation based protocol, Multiple Granularity, Multiversion Schemes, Deadlock Handling. (8L)

### **Text Book:**

Silberschatz A. et.al, Database System Concepts, 6<sup>th</sup> Edition, Tata Mc-Graw Hill, New Delhi, 2011. (T1)

### COURSE INFORMATION SHEET

Course code: CS310

Course title: **Formal language and Automata Theory**

Pre-requisite(s): Discrete Mathematics

Co- requisite(s): NIL

Credits: L:3 T: 0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: II

Branch: CSE/IT

### Course Objectives

This course enables the students to:

1.	Define a system and recognize the behavior of a system.
2.	Design finite state machines and the equivalent regular expressions.
3.	Construct pushdown automata and the equivalent context free grammars
4.	Design Turing machines and Post machines
5.	Learn about the issues in finite representations for languages and machines, as well as gain a more formal understanding of algorithms and procedures.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Relate formal languages and mathematical models of computation
2.	Analyze different types of languages and the corresponding machines
3.	Analyze the Pushdown machine and its role in compiler construction

4.	Find the capability of real computers and learn examples of unsolvable problems.
5.	Analyze classes of P, NP, NP-C and NP-Hard problems

## Syllabus

### Module I

**Introduction to Automata:** (mathematical model of digital devices, including real computer), State Transition Graph, Finite Automaton (FA) and its types, Deterministic Finite Automaton (DFA), Non-deterministic Finite Automaton (NFA), Complement, Union, Intersection of FA's, Conversion Strategy from NFA to DFA, Minimization of FA, Finite Automaton with Output, Applications of FA. (10L)

### Module II

**Regular Expressions(RE):** Introduction, R.E.'s and basic operations, Algebraic laws on Regular Expression, Finite and Infinite Languages, Equivalence of finite Automaton and regular expressions, Constructing NFA from Regular Expression, Pumping Lemma for Regular Language, Closure properties of Regular Languages, Non-regular languages, Applications of Regular Expression. (6L)

### Module III

**Grammar:** Introduction, Formal Definition of Grammar, The Chomsky Hierarchy of Grammar, Designing Regular grammar from DFA, Context Free Grammar, Closure properties of Context Free Languages, CFG and Normal form: Chomsky Normal Form, Greibach Normal Form, Non-Context Free Language, Applications of CFGs. (8L)

### Module IV

**Push Down Automaton (PDA):** Introduction, Definition of PDA, Types of Pushdown Automata (DPDA and NPDA), Converting CFG to PDA, Derivation (Parsing), Parsing Techniques, Ambiguous and Unambiguous Grammar, Demerits of Ambiguous Grammar. (8L)

### Module V

**Turing Machine(TM):** Single Tape TM, Variations of TM, Halting Problem, Turing Machine and Languages, Enumerable Languages, Decidable, Recognizable and Undecidable languages, Solvable and Unsolvable problems, Post Correspondence Problems(PCP), Classes of Problems: P, NP, NP-C and NP-Hard. (8L)

### Text Book:

### Course Objectives

This course enables the students:

A.	To provide students with a fundamental understanding as to how an XHTML-compliant web site is developed, implemented, and maintained. XHTML
B.	To provide students with a fundamental understanding as to how an Cascading Style Sheets- is developed and implemented.
C.	To provide basic understanding of java script to help in designing of web pages.
D.	To understand the need of Dom model.
.E	To provide the role of xml in web design

### Course Outcomes

After the completion of this course, students will be able to do the following:

1.	Describe the components of the Internet and Web technology
2.	Analyse common Internet applications such as marketing, collaboration, electronic commerce and document management
3.	Explain the basics of Internet technology, such as http and the World Wide Web, HTML, and JavaScripts;
4.	Create WWW pages to serve as front-end to client/server, Internet applications
5	Analyzing and designing Internet applications and testing and documenting the solutions developed.

## Syllabus

Module	Contents	No of Lect
1	Web 2.0: search, content networks, user-generated content, blogging, social networking, social media, tagging, social bookmarking, rich Internet applications, web services, location-based services, Web 2.0 monetization and business models, future of the Web.	7
2	Extensible Hypertext Mark up Language (XHTML): XHTML syntax, headings, linking, images, special characters and horizontal rules, lists, tables, forms, internal linking, meta elements.	8
3	Cascading Style Sheets (CSS): separation of content and presentation, inline styles, embedded style sheets, conflicting styles, linking external style sheets, positioning elements, backgrounds, element dimensions, box model and text flow, media types, building a CSS drop-down menu, user style sheets.	8
4	JavaScript: client side scripting, control statements, functions, arrays, objects, events.  Document object model: objects and collections	8
5	Extensible Mark up Language (XML) and RSS: Advantages and applications, structuring data, XML namespaces, Document Type Definitions (DTDs), XML vocabularies, RSS.	9

**COURSE INFORMATION SHEET**

Course code: IT320

Course title: **User Interface Design**

Pre-requisite(s): CS204 OOPDP

Co- requisite(s):NIL

Credits: L: 3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students

1.	To impart the basic concepts of User Interface Design.
2.	To develop understanding about human computer interaction methods that utilize more general, widespread and easier-to-learn capabilities.
3.	The cognitive and perceptual constraints that affect interface design
4.	Techniques for evaluating the usability of an interface
5	How to communicate the results of a design process, both in oral and written form

### Course Outcomes

After the completion of this course, students will be able to do the following:

1.	Identify the key terms related to user interfaces and user interface design and implementation
2.	Identify and describe various types of computer users and computer use contexts
3.	Identify and describe various types of user interfaces
4.	Describe and explain the user interface design process
5	Identify and describe common abstract user interface components, such as radio buttons and group boxes

### Syllabus

#### Module I

**Introduction:** Importance of user interface – definition, importance of good design, brief history – Graphical User Interface – Web User Interface – Theories, Principles and Guidelines of User interface design. (7L)

#### Module II

**Design Process:** Obstacles in development path designing for people-Understanding Human Interaction with computers, Importance of Human Characteristics, Human consideration, Human Interaction speeds – Understanding Business function. (8L)

#### Module II

**Screen Designing:** Design goals - screen meaning and purpose, organizing screen elements ordering of screen data and content – screen navigation and flow – visually pleasing composition – amount of information – focus and emphasis – presenting information simply and meaningfully – information retrieval on web – Statistical graphics – Technological considerations in Interface Design. (8L)

#### Module IV

**Menus and navigation schemes:** structures of menus-functions of menus- contents of menus - formatting of menus – phrasing the menu- selecting menu choices-navigating menus-kinds of

graphical menus- Selection of windows-Window characteristics-components of windows-window presentation styles-types of windows-window management-organising window functions-window operations-Selection of device based and screen based controls - text and messages – icons and images – Multimedia – colours- uses, problems, choosing colours. (8L)

## **Module V**

**Distributed and Collaborative Interaction:** Device consistency-distribution of the user interface-event distribution-graphical package layer-programmable API-Model semantics distribution-data layer distribution-asynchronous collaboration-Software tools-specification methods- interface building tools –evaluation and critiquing tools-Interaction devices keyboard and function keys - pointing devices- speech recognition, digitization and generation – image and video displays – printers. (9L)

## COURSE INFORMATION SHEET

Course code:IT322

Course title: **Cloud Computing**

Pre-requisites: IT201 Basics of Intelligent Computing

Co- requisite(s): NIL

Credits: L: 3 T: 0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	Understand the elements of distributed computing and core aspects of cloud Computing.
2.	Understand the concepts and aspects of virtualization and application of virtualization technologies in cloud computing environment
3.	Understand the architecture and concept of different cloud models: IaaS, PaaS, SaaS and gain comprehensive knowledge of different types of clouds.
4.	Be familiar with application development and deployment using services of different cloud computing technologies provider: Google app Engine, Amazon Web Services (AWS) and Microsoft Azure.
5.	Understanding the key security, compliance, and confidentiality challenges in cloud computing.

### Course Outcomes:

After the completion of this course, students will be able to:

1.	Recall the various aspects of cloud computing and distributed computing
2.	Understand the specifics of virtualization and cloud computing architectures.
3.	Develop and deploy cloud application using services of different cloud computing technologies provider: Google app Engine, Amazon Web Services (AWS) and Microsoft Azure.
4.	Evaluate the security and operational aspects in cloud system design, identify and deploy appropriate design choices when solving real-world cloud computing problems.
5.	Provide recommendations on cloud computing solutions for a Green enterprise.

## Module I

**Introduction:** Essentials, Benefits and need for Cloud Computing - Business and IT Perspective - Cloud and Virtualization - Cloud Services Requirements - Cloud and Dynamic Infrastructure - Cloud Computing Characteristics Cloud Adoption. (8L)

## Module II

**Principles of Parallel and Distributed Computing:** Eras of computing, Parallel vs. Distributed computing, Elements of parallel computing, Elements of distributed computing, Technologies for distributed computing. (8L)

## Module III

**Virtualization:** Introduction, Characteristics of virtualized environments, Taxonomy of virtualization techniques, Virtualization and cloud computing, Pros and cons of virtualization, Technology examples.

**Storage virtualization:** Storage Area Networks - Network-Attached storage - Cloud Server Virtualization - Virtualized Data Centre. (8L)

## Module IV

**Cloud computing architecture:** Introduction, Cloud reference model, Types of clouds, Economics of the cloud, Open challenges. (8L)

## Module V

**Cloud platforms in industry and Cloud applications :** Amazon web services, Google app engine, Microsoft azure, Observations, Scientific applications, Scientific, Business and Consumer applications. (8L)

## **COURSE INFORMATION SHEET**

Course code: CS320

Course title: **Optimization Technique**

Pre-requisite(s)::CS206Design and Analysis of Algorithm

Co- requisite(s):Nil

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### **Course Objectives**

This course enables the students:

1.	To understand the basic idea of Network Optimization Models.
2.	To introduce the basic concept of Dynamic Programming.
3.	To understand the idea of Nonlinear Programming.
4.	To know about the basic concepts of Heuristic Programming.
5.	Provide the students to practice on Linear Programming for Problem solving.

### **Course Outcomes**

After the completion of this course, students will be able to :

1.	Prepare the operational models for the real-world applications using Linear Programming
2.	Apply the techniques to solve the Network Optimization models
3.	Analyse the computational feasibility of the solutions using the Deterministic and Probabilistic Dynamic Programming
4.	Model problems using Non-Linear Programming and evaluate the suitability of the available techniques for the problem at hand
5	Apply the meta-heuristic algorithms for real world optimization

### **Syllabus Module I**

Introduction to Linear Programming, Solving Linear Programming Problems –Graphical Method, The Simplex Method, The Revised Simplex Method, Duality Theory, Dual Simplex Method, Sensitivity Analysis. (8L)

#### **Module II**

Integer Programming, Gomory's Cutting Plane Method, The Branch-and-Bound Technique for Binary and Mixed-Integer programming. Network Optimization Models, The Network Simplex Method. (8L)

#### **Module III**

Dynamic Programming: Characteristics of Dynamic Programming Problem, Deterministic Dynamic Programming, Probabilistic Dynamic Programming. (8L)

#### **Module IV**

Nonlinear Programming: Graphical Illustration of Nonlinear Programming Problems, Types of Nonlinear Programming Problems, Unconstrained Optimization, The Karush-Kuhn-Tucker (KKT) Conditions for Constrained Optimization, Quadratic Programming, Separable Programming, Convex Programming. (8L)

#### **Module V**

Queueing Theory : Basic Structure of Queueing Models, Examples of Real Queueing Systems, Role of Exponential Distribution, The Birth-and-Death Process, Different Queueing Models.

Heuristic Programming and Metaheuristics: The Nature of Meta-Heuristics, Search, Simulated Annealing, Genetic Algorithms. (8L)

## COURSE INFORMATION SHEET

Course code: CS321

Course title: **Soft Computing**

Pre-requisite(s): MA205 Discrete Mathematics

Co- requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	To understand the concept of fuzzy logic and controllers
2.	To understand the various architectures of ANN and its learning methods
3.	To learn about basic concepts of genetic algorithm and its operators
4.	To understand the Artificial Neural Networks
5.	To understand the Genetic Algorithms

### Course Outcomes

After the completion of this course, students will be able to:

1.	Solve numerical on Fuzzy sets and Fuzzy Reasoning.
2.	Develop Fuzzy Inference System (FIS).
3.	Solve problems on Genetic Algorithms
4.	Explain concepts of neural networks
5.	Develop neural networks models for various applications.

### Syllabus

#### Module I

**Fuzzy Set Theory:** Basic Definition and Terminology, Set Theoretic Operations, Fuzzy types and levels, MF Formulation and Parameterization, MF of two dimensions, Fuzzy Union, Intersection and Complement, Fuzzy Number, Fuzzy measure. (8L)

#### Module II

**Fuzzy Logic:** Fuzzy Rules and Fuzzy Reasoning: Extension Principles and Fuzzy Relations, Fuzzy IF THEN Rules, Defuzzification, Fuzzy Reasoning. Fuzzy Inference System: Introduction, Mamdani Fuzzy Models, Other Variants, Sugeno Fuzzy Models, Tsukamoto Fuzzy Models. (8L)

#### Module III

**Fundamentals of Genetic Algorithms:** Basic Concepts, Creation of Offsprings, Encoding, Fitness Functions, Reproduction, Genetic Modelling: Inheritance Operators, Cross over, Inversion and detection, Mutation operator, Bitwise operators. (8L)

#### **Module IV**

**Introduction to Artificial Neural Networks:** What is a Neural Network? Human Brain, Models of Neuron, Neural Network viewed as Directed Graphs, Feedback, Network Architecture, Knowledge Representation, Learning processes:(Error correction, Memory-Based, Hebbian ,Competitive,Boltzman ,Supervised,Unsupervised),Memory,Adaptation. (8L)

#### **Module V**

Perceptrons, Adaline, Back Propagation Algorithm, Methods of Speeding, Convolution Networks, Radical Basis Function Networks, Covers Theorem, Interpolation Learning, The Hopfield Network. (8L)

#### **Text Books:**

1. Jang J.S.R., Sun C.T. and Mizutani E., “Neuro-Fuzzy and Soft Computing” PHI/Pearson Education, New Delhi 2004.(T1)

## **COURSE INFORMATION SHEET**

Course code: CS324

Course title: **SYSTEM PROGRAMMING**

Pre-requisite(s): Nil

Co- requisite(s):NIL

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B.Tech

Semester / Level: III

Branch: CSE/IT

### **Course Objectives**

This course enables the students:

1.	Describe the utility of different system programs & system tools.
2.	Familiarize with the tradeoffs between run-time and compile-time processing (Linking & Loading techniques).
3.	To learn the concepts and techniques behind the designing of various system software.
4.	To organize the functionalities & components of system software & tools into different layers for efficient code generation.

### **Course Outcomes**

After the completion of this course, students will be:

1.	Able to understand the evolution of various system software.
2.	Able to understand the various data structures that helps in the proper functioning of the system programs.
3.	Able to understand the basic design of various system software.
4.	Able to understand the designing of text editors, debuggers etc.
5.	Able to design Assemblers

### **Syllabus Module I**

**Introduction:** System Software & its Components, Evolution of System Softwares- Operating System, Loaders, Interpreters, Compilers, Linkers, Assemblers.

**Assemblers:** Elements of Assembly Language Programming, Assembly Process, Single Pass Assembler, Design of a 2-Pass assembler for In 8088. (8L)

#### Module II

**Macros & Macro processors:** Macros, Different forms of Macros, Macros using AIF, AGO, REPT. Etc, Design of a Macro Processor, Macro Assembler. (8L)

#### Module III

**Loaders:** Basic Loader Functions, Absolute Loader, Compile & go Loader, Relocating Loader, Direct Linking Loader. (8L)

#### Module IV

**Linkage Editors:** Linking and Relocation, Program Reliability, Linkage Editor and its Application in IBM-PC, Linking for Program Overlays. (8L)

#### Module V

**Software Tools:** Spectrum of Software Tools, Text Editors, Interpreter and Program Generators, Debug Monitors, Programming Environments. (8L)

#### Text Book:

## **COURSE INFORMATION SHEET**

Course code: CS391

Course title: **Introduction to Distributed System**

Pre-requisite(s): NIL

Co- requisite(s):

Credits: L: 3 T: 0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### **Course Objectives**

This course enables the students to:

1.	Identifying trends in distributed systems
2.	Introducing peer to peer services and distributed file systems
3.	Understanding the issues in process and resource management
4.	Understanding the requirements for designing and supporting distributed systems

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Define distributed systems and their architecture.
2.	outline peer to peer services and distributed file systems
3.	Elaborate on concepts of process and resource management
4.	Analyze the requirements for designing and supporting distributed systems
5.	Discuss and design the working of distributed systems

### **Syllabus**

#### **Module I**

**Introduction:** Introduction to “Large-Scale”distributed systems, Consequences of “large-scale”  
Some large-scale distributed systems, Architectures of large scale distributed systems. (8L)

#### **Module II**

**Design principles of Distributed system:** Introduction to peer-to-peer systems, The peer-to-peer paradigms, Services on structured overlays, Building trust in P2P systems. (8L)

### **Module III**

**Communication in Distributed system:** System Model – Inter Process Communication – the API for internet protocols – External data representation and Multicast communication.

**Peer to Peer Services:** Peer-to-peer Systems - Introduction - Napster and its legacy - Peer-to-peer - Middleware - Routing overlays.

**File System:** Features-File model -File accessing models- File sharing semantics

**Naming:** Identifiers, Addresses, Name Resolution - Name Space Implementation - Name Caches - LDAP. (8L)

### **Module IV**

**Remote Method Invocation and Objects:** Remote Invocation - Introduction - Request-reply protocols - Remote procedure call - Remote method invocation.

**Case study:** Java RMI – Group communication - Publish-subscribe systems - Message queues - Shared memory approaches -Distributed objects - Case study: Enterprise Java Beans -from objects to components. (8L)

### **Module V**

**Process Management:** Process Migration: Features, Mechanism - Threads: Models, Issues, Implementation.

**Resource Management:** Introduction- Features of Scheduling Algorithms -Task Assignment Approach - Load Balancing Approach - Load Sharing Approach. (8L)

### **Text Books:**

Coulouris G., Dollimore J., and Kindberg T., “Distributed Systems Concepts and Design”, 5<sup>th</sup> Edition, Pearson Education, 2012.(T1)

### **COURSE INFORMATION SHEET**

Course code: IT330

Course title: **Cryptography and Network Security**

Pre-requisite(s):

Co- requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### **Course Objectives**

1.	To Learn Basic Concepts of Cryptography and Network Security and Apply them in various Real life Application.
2.	To understand the basic concepts of Network Security
3.	To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
4.	To understand how to deploy encryption techniques to secure data in transit across data networks
5.	To design security applications in the field of Information technology

### **Course Outcomes**

After the completion of this course, students will be:

1.	Understand the basic concept of Cryptography and Network Security and their mathematical models, and to be familiar with different types of threats
2.	Learning and applying various Ciphering Techniques.

3.	Apply Symmetric and Asymmetric Cryptographic Algorithms and Standards in Networks.
4.	Examine the issues and structure of Authentication Service and Electronic Mail Security
5.	To explain and classify different malicious programs, worms and viruses, and to learn the working and design principles of Firewalls

## Syllabus

### Module I

**Introduction to Cryptography:** Computer Security concepts, The OSI Security Architecture, Security Attacks, Security Services, A model for Network Security, Classical Encryption Techniques. (8L)

### Module II

**Mathematical Foundations of Cryptography:** Modular Arithmetic, Euclidean Algorithm, Groups, Rings, Fields, Finite Fields of the Form  $GF(p)$ , Polynomial Arithmetic, Finite Fields of the Form  $GF(2^n)$ , Prime Numbers, Fermat's and Euler's Theorem, The Chinese Remainder Theorem, Quadratic Congruence, Discrete Logarithms. (8L)

### Module III

**Symmetric and Asymmetric Cryptography:** Difference Between Symmetric and Asymmetric Cryptography, DES, Triple DES, AES, RSA Cryptosystem, Symmetric and Asymmetric Key Cryptography Together, Elgamal Cryptosystem, Elliptic Curve Cryptosystems, , Diffie-Hellman Key Exchange , Cryptographic Hash Functions, Message Authentication Codes, Digital Signature. (8L)

### Module IV

**Internet Security Protocols :** Basic Concepts, Security Socket Layer (SSL), Secure Hyper Text Transfer Protocol (SHTTP), Time stamping Protocol(TSP), Secure Electronic Transaction(SET), SSL Versus SET, 3-D Secure Protocol, Electronic Money, Email Security, Wireless Application Protocol(WAP) Security, Security in GSM. (8L)

### Module V

**Network Security:** Users, Trusts and Trusted Systems, Buffer Overflow and Malicious Software, Malicious Programs, Worms, Viruses, Intrusion Detection Systems (IDS), Firewalls: Definitions, Constructions and Working Principles. (8L)

### Text Book:

Forouzan B. A., Mukhopadhyay D., "Cryptography and Network Security", 3<sup>rd</sup> Edition, Mcgraw Higher Education, 2016. (T1)

### **COURSE INFORMATION SHEET**

Course code: CS270

Course title: **Fundamentals of Computer Science**

Pre-requisite(s): Nil

Co- requisite(s):

Credits: L:3 T:0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: II

Branch: CSE/IT

#### **Course Objective**

This course enables the students:

1.	Use a variety of hardware and software on campus and do simple file editing.
2.	Discuss computer organization in simple terms, including major future directions.
3.	Describe how a computer actually performs instructions.
4.	Discuss the data organization concepts that apply to physical storage, data structures, files, and databases.
5.	Discuss the features of a programming language and the nature of the language translation process.

#### **Course Outcomes:**

After the completion of this course, students will be:

1.	Distinguish between program writing and algorithm development and apply various problem solving techniques.
2.	Describe the functions of an operating system and discuss the problems inherent in providing multiprogramming.
3.	Distinguish between good and bad programming design methods.
4.	Describe data organization concepts.
5.	Discuss methods of measuring algorithm performance and the limits of computability.

#### **Syllabus:**

##### **Module I**

History of Computing, Computer Generations, Significant Events of recent computing history, Using the terminal, Editing text files, System commands, Using electronic mail Data representation. Binary numbers, Integers - 2's complement, sign-magnitude, Fractions - binary, hexadecimal, Exponents - binary, hexadecimal, excess notation, Characters - ASCII, EBCDIC. (8L)

##### **Module II**

Computer Architecture, CPU organization - registers, op codes, execution cycle, Memory organization - addresses, base & bound. Device operations - interrupts, parity, commands, physical

actions. Modern architectures - pipelining, vector and array processors, Future architectures - data driven, demand driven and inference machines. (8L)

### **Module III**

Algorithm Development ,Top-down approach,Common tasks - searching, sorting, merging Techniques - repetition, recursion, divide-and-conquer Programming Languages. Language levels, Data types, Operators, Control statements and conditions, Input and output Specifications, Paradigms - procedural, functional, specification, declaration, object-oriented. (8L)

### **Module IV**

Software Engineering Modularization Documentation Design methodologies Software life cycle Systems Software (3 hrs)Operating systemsCompilers, interpreters and assemblers, Linkers and loaders. (8L)

### **Module V**

Data Organization,Data Structures: Consecutive storage - arrays, stacks, queues, trees Files - access and organization, Data base approaches - relational, network, distributed. Algorithm Analysis, Measuring time and space, Effects of data structures, Computability. (8L)

### **Text Books:**

Brookshear, J.G., Computer Science, An Overview, Benjamin/Cummings, 1994. (T1)

### **Course Objective**

This course enables the students:

1.	Use a variety of hardware and software on campus and do simple file editing.
2.	Discuss computer organization in simple terms, including major future directions.
3.	Describe how a computer actually performs instructions.
4.	Discuss the data organization concepts that apply to physical storage, data structures, files, and databases.
5.	Discuss the features of a programming language and the nature of the language translation process.

### **Course Outcomes:**

After the completion of this course, students will be:

	Distinguish between program writing and algorithm development and apply various problem solving techniques.
2.	Analyze and discuss the problems and their solutions through programming
3.	Distinguish between good and bad programming design methods.
4.	Write algorithms to solve problems.
5.	Discuss methods of measuring algorithm performance and the limits of computability.

1. To find the sum of individual digits of a given number
2. To print the Fibonacci series for 1 to n value
3. To print a prime numbers up to 1 to n
4. To calculate the sum.  $\text{Sum} = 1 - x^2/2! + x^4/4! - x^6/6! + x^8/8! - x^{10}/10!$
5. Programs that use recursive function to find the factorial of a given integer.
6. Program that use non recursive function to find the factorial of a given integer.
7. To find the GCD of two given integers by using the recursive function
8. Two integer operands and one operator form user, performs the operation and then prints the result.(Consider the operators +,-,\*, /, % and use Switch Statement)
9. To find both the largest and smallest number in a list of integers.
10. To perform the addition of two matrices
11. Functions to insert a sub string into given main string from a given position.
12. To generate Pascal's triangle
13. To convert the given binary number to 2's complement
14. To read the two complex numbers and perform the addition and multiplication of these two numbers.
15. Program which copies one file to another

## **COURSE INFORMATION SHEET**

Course code: CS201

Course title: **Data Structures**

Pre-requisite(s): Programming for Problem Solving

Co- requisite(s): Data Structure Lab

Credits: L: 3    T: 1    P: 0

Class schedule per week: 4

Class: B. Tech

Semester / Level: II/2

Branch: CSE/IT

### **Course Objectives**

This course enables the students:

F.	To be familiar with basic techniques of algorithm analysis.
G.	To understand basic concepts about arrays, stacks, queues, linked lists, trees and graphs.
H.	To understand concepts of searching and sorting techniques.
I.	To implement various linear & non-linear data structures; and searching & sorting algorithms.
J.	To assess how the choice of data structures impacts the performance of a program.

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Define various linear and non-linear data structures like stack, queue, linked list, tree and graph.
2.	Explain operations like insertion, deletion, traversal, searching, sorting etc. on various data structures.
3.	Design various data structures and their operations.
4.	Analyze the performance of data structure based operations including searching and sorting.
5.	Justify the choice of appropriate data structure as applied to specified problem definition.

## **SYLLABUS**

### **Module I**

#### **Basic Concepts**

**Definition** and basics of: Data Structure, ADT, Algorithms, Time and Space Complexity, Asymptotic Notations ( $O$ ,  $\theta$ ,  $\Omega$ ), Time complexity computation of non-recursive algorithms (like Matrix addition, Selection sort – using step count), Array – basic operations, concept of multi-dimensional array, Polynomial operations using Array, Sparse Matrix.

(8L)

### **Module II**

#### **Stack and Queue**

Stack ADT: basic operations, Queue ADT: basic operations, Circular Queue, Evaluation of Expressions, Another application or Mazing Problem.

(8L)

### **Module III**

#### **Linked List**

Singly Linked List: concept, representation and operations, Circular Linked List, Polynomial and Sparse Matrix operations using LL, Doubly Linked List: basic concept.

(8L)

### **Module IV**

#### **Tree and Graph**

Basic concepts and terminologies, Binary Search Tree and Heap, Disjoint Set, Graph: concept and terminologies, Concept of BFS, DFS, Spanning Tree, Connected Components.

(8L)

### **Module V**

#### **Searching and Sorting**

Sequential Search and Binary Search, Insertion Sort, Heap Sort, Radix Sort, External Sorting: k-way merging approach.

(8L)

#### **Text book:**

2. Sahni Horwitz, Freed Anderson, Fundamentals of Data Structures in C, 2<sup>nd</sup> Edition (or latest), University Press. (T1)

#### **Reference books:**

3. Thareja Reema, Data Structures Using C, 2<sup>nd</sup> Edition, Oxford University Press. (R1)
4. Tanenbaum, Langsam, Augenstein, Data Structures using C, Pearson. (R2)

### COURSE INFORMATION SHEET

Course code: CS202

Course title: **Data Structures Lab**

Pre-requisite(s):

Co- requisite(s):

Credits: L: 0 T: 0 P: 3

Class schedule per week: 3

Class: B. Tech

Semester / Level: II

Branch: All

## Course Objectives

This course enables the students:

A.	To assess how the choice of data structures and algorithm design methods impact the performance of programs.
B.	To choose the appropriate data structure and algorithm design method for a specified application.
C.	To solve problems using data structures such as linear lists, stacks, queues, hash tables, binary trees, heaps, binary search trees, and graphs and writing programs for these solutions.
D.	Analyse and compare the different algorithms

## Course Outcomes

After the completion of this course, students will be able to:

1.	Be able to design and analyze the time and space efficiency of the data structure
2.	Analyze run-time execution of previous learned sorting methods, including selection, merge sort, heap sort and Quick sort
3.	Have practical knowledge on the applications of data structures
4.	Be capable to identify the appropriate data structure for given problem

## SYLLABUS

1. Program to Find the Number of Elements in an Array
2. Develop and Implement a menu driven program in C for the following Array operations
  - a. Creating Array of N Integer elements.
  - b. Display of Array elements with suitable headings.
  - c. Inserting an element (ELEM) at a given valid position (POS).
  - d. Deleting an element at a given valid position (POS).
  - e. Exit
3. Programs for Stack, Queues and Circular Queues using Arrays
4. Program to convert an Infix Expression into Postfix and Postfix Evaluation
5. Program to implement stack using arrays
6. Program to implement stack using linked list
7. Program to implement multiple stack in a single array
8. Program to convert infix notation to postfix notation using stacks
9. Program to implement queue using arrays
10. Program to implement queue using pointers
11. Program to reverse elements in a queue
12. Program to implement circular queue using arrays
13. Program to create add remove & display element from single linked list
14. Program to create add remove & display element from double linked list
15. Program to count number of nodes in linear linked list
16. Program to create add remove & display element from circular linked list
17. Programs to implement stack & queues using linked representation
18. Program to concatenate two linear linked lists
19. Program to accept a singly linked list of integers & sort the list in ascending order.
20. Program to reverse linked list
21. Program to represent polynomial using linked list
22. Program to add two polynomials using linked list

23. Program for the creation of binary tree, provide insertion & deletion in c
24. Program for pre-order, post-order & in-order traversals of a binary tree using non recursive.
25. Program to count no, of leaves of binary tree
26. Program for implementation of B-tree (insertion & deletion)
27. Program for implementation of multi-way tree in c
28. Program for implementation of AVL tree
29. Program to implement bubble sort program using arrays
30. Program to implement merge sort using arrays
31. Program to implement selection sort program using arrays
32. Program to implement insertion sort program using arrays
33. Program to implement topological sort using arrays
34. Program to implement heap sort using arrays
35. Program to implement heap sort using pointers
36. Program to implement bubble sort program using pointers
37. Program to implement linear search using pointers
38. Program to implement binary search using pointers
39. Program to implement linear search using arrays
40. Program to implement binary search using arrays

#### **COURSE INFORMATION SHEET**

Course code: CA201

Course title: **Object Oriented Programming using Java**

Pre-requisite(s): Nil

Co- requisite(s):

Credits: L: 3 T: 0 P:0

Class schedule per week: 3

Class: B.Tech

Semester / Level: II

Branch: CSE/IT

#### **Course Objectives**

This course enables the students:

A.	Learn about Object oriented programming concepts
B.	Learn how to use the JDK
C.	Improve their programming skills in core Java
D.	Use the Java packages, applets for software development

#### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Use the knowledge of object oriented programming through Java
2.	Successfully use the JDK of various versions for programming
3.	Apply the knowledge gained for project work as well as Advanced Java
4.	Apply latest know-how related to the new developments in the field of Java
5.	develop GUI applications.

## Syllabus

### MODULE I

Procedure-Oriented Programming, Object-Oriented programming, Benefits of OOP, Applications of OOP, Basics, Evolution of Java, Structure of JAVA Program, Simple Java Program, Tokens, Comments, Identifiers, Operators, Literals, Control Structures. Java Environment Setup, Compiling a Java Program, Java Virtual Machine, Philosophy of Java and Benefits.

(6L)

### MODULE II

**Data types and program statements:** Primitive and reference data types, variables and constants, enumerated constants, labelled statement, expression and null statements, compound statement, control statement – decision and loops, jump statement, declaration statement, try-throw-catch-finally statement, declaring and creating arrays, accessing array elements, assigning values to array elements, multidimensional arrays.

(9L)

### MODULE III

**Functions, Data Abstraction and classes:** Declaration, definition and call, main method arguments, reference variables, method overloading, parameter passing by value for primitive types, object references and arrays, scope of variables, return from methods.

Class and object, class members and initialization, access rights of members – public, private and protected access modifiers, constructor and copy constructor, mutability, finalization, dynamic memory management, garbage collection, this keyword, static members, scope of variables, interface – declaration, implementation and extending, package and package visibility.

(9L)

### MODULE IV

**Inheritance and Collection classes:** multi level and single inheritance, multiple inheritance of interfaces, Object class, access rights in subclasses and packages, constructor calling sequence, super keyword, dynamic binding of methods, abstract class, overriding, shadowing and hiding, finalize, association, aggregation and composition. String, StringBuffer, Date, Calendar, Math, Object, Class, Exception class.

(8L)

### MODULE V

**Input/Output and JAVA Applets:** Stream classes – InputStream, OutputStream, Buffered Stream, file classes and handling, pushback streams, reader and writer classes, file reader and writer, serialization. Applet code example, HTML tags for applet, applet lifecycle, color, font and basic GUI handling, basic graphics, animation.

(8L)

### COURSE INFORMATION SHEET

Course code: CA202

Course title: **Object Oriented Programming using Java Lab**

Pre-requisite(s): Nil

Co- requisite(s):

Credits: L: 0 T: 0 P:3

Class schedule per week: 3

Class: B.Tech

Semester / Level: II

Branch: CSE/IT

### Course Objectives

This course enables the students to:

1.	To write programs using abstract classes.
2.	To write programs for solving real world problems using java collection frame work.
3.	To write multithreaded programs and impart hands on experience with java programming.
4.	To write GUI programs using swing controls in Java.
5.	To introduce java compiler and eclipse platform.

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Impart hands on experience with java programming.
CO2	Write programs using abstract classes.
CO3	Write multithreaded programs.
CO4	Write GUI programs using swing controls in Java.
CO5	Simulate basic Engineering problems

### Syllabus

1. Use Eclipse or Net bean platform and acquaint with the various menus. Create a test project, add a test class, and run it. See how you can use auto suggestions, auto fill. Try code formatter and code refactoring like renaming variables, methods, and classes. Try debug step by step with a small program of about 10 to 15 lines which contains at least one if else condition and a for loop.
2. Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -, \*, % operations. Add a text field to display the result. Handle any possible exceptions like divided by zero.
3.
  - a. Develop an applet in Java that displays a simple message.
  - b. Develop an applet in Java that receives an integer in one text field, and computes its factorial Value and returns it in another text field, when the button named “Compute” is clicked.
4. Write a Java program that creates a user interface to perform integer divisions. The user enters two numbers in the text fields, Num1 and Num2. The division of Num1 and Num 2 is displayed in the Result field when the Divide button is clicked. If Num1 or Num2 were not an integer, the program would throw a Number Format Exception. If Num2 were Zero, the program would throw an Arithmetic Exception. Display the exception in a message dialog box.
5. Write a Java program that implements a multi-thread application that has three threads. First thread generates random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.
6. Write a Java program for the following:
  - i. Create a doubly linked list of elements.
  - ii. Delete a given element from the above list.
  - iii. Display the contents of the list after deletion.
2. Write a Java program that simulates a traffic light. The program lets the user select one of three lights: red, yellow, or green with radio buttons. On selecting a button, an appropriate message with “Stop” or “Ready” or “Go” should appear above the buttons in selected color. Initially, there is no message shown.
3. Write a Java program to create an abstract class named Shape that contains two integers and an empty method named print Area (). Provide three classes named Rectangle, Triangle, and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.
4. Suppose that a table named Table.txt is stored in a text file. The first line in the file is the header, and the remaining lines correspond to rows in the table. The elements are separated by commas. Write a java program to display the table using Labels in Grid Layout.
5. Write a Java program that handles all mouse events and shows the event name at the center of the window when a mouse event is fired (Use Adapter classes).
6. Write a Java program that loads names and phone numbers from a text file where the data is organized as one line per record and each field in a record are separated by a tab (\t). It takes a name or phone number as input and prints the corresponding other value from the hash table (hint: use hash tables).
7. Write a Java program that correctly implements the producer – consumer problem using the concept of interthread communication.
8. Write a Java program to list all the files in a directory including the files present in all its subdirectories.
9. Write a Java program that implements Quick sort algorithm for sorting a list of names in ascending order

10. Write a Java program that implements Bubble sort algorithm for sorting in descending order and also shows the number of interchanges occurred for the given set of integers.

## COURSE INFORMATION SHEET

Course code: CS204  
Course title: **Object Oriented Programming and Design Patterns**  
Pre-requisite(s): Data Structure  
Co- requisite(s):  
Credits: L: 3 T: 0 P: 0  
Class schedule per week: 3  
Class: B. Tech  
Semester / Level: II/2  
Branch: CSE/IT

### **Course Objectives**

This course enables the students:

1.	The course shall allow students to understand the basic tenets of OOP.
2.	The course will exemplify the basic syntax and constructs of JAVA.
3.	The course will help students understand the application OOP principles in various use cases.
4.	The course will explain basic JAVA GUI components and their working.
5.	The course aims to expose students to newer JAVA constructs like NIO, Lambdas etc.

### **Course Outcomes**

After the completion of this course, students will be:

1.	Identify the difference between procedural and OO programming.
2.	Construct programs using various OOP principles.
3.	Design UI using JAVA GUI components.
4.	Operate on files and strings in real life scenarios.
5.	Analyze thread performance and inter thread communication issues

## **SYLLABUS**

### **Module I**

#### **Introduction to Classes, Objects and Java**

Introduction to Object Technology, Java, Understanding the Java development environment, Programming in Java, Memory concepts, Doing basic Arithmetic, Comparing entities, Classes, Objects, Methods, Strings, Primitive vs reference types.

(8L)

## **Module II**

### **Control Statements, Methods and Arrays**

Basic selection statements, Iterative constructs, Relative and Logical operators, break, continue, Methods, static methods, parameter passing, argument promotion and casting, scopes, method overloading. Arrays and ArrayList in Java, Enhanced for statement, Passing arrays to methods, Multidimensional arrays, Using command line arguments.

(8L)

## **Module III**

### **Object Oriented Concepts: Polymorphism & Inheritance**

Controlling access to class members, the use of this keyword, getters and setters, Composition, enum, the use of static and final, Garbage collection. Superclass and subclass, protected members, constructors in subclass, the Object class, Introduction to polymorphism, Abstract classes and methods, Assignment between subclass and superclass variables, Creating and using interfaces.

(8L)

## **Module IV**

### **Exception Handling & GUI Design**

When to use exception handling, Java exception hierarchy, finally block, Stack unwinding, Chained exceptions, Declaring new exception types, Assertions, try with resources. Simple I/O with GUI, Basic GUI Components, GUI Event handling, Adapter classes, Layout managers, Using panels.

(8L)

## **Module V**

### **Strings, characters & Files**

Working with the String and StringBuilder class, Character class, Tokenizing strings, Regular Expressions, Files and Streams, Using NIO classes, Sequential file handling, Object serialization, JFileChooser, Introduction to threading, Introduction to Generics and lambda expressions.

(8L)

## Semester V(Laboratories)

### COURSE INFORMATION SHEET

Course code: IT302

Course title: DCCN Lab

Pre-requisite(s):

Co- requisite(s): None

Credits:      L: 0    T: 0    P: 3

**Class schedule per week: 3**

**Class: B.Tech**

**Semester / Level: III**

**Branch: CSE/IT**

### **Course Objectives**

**This course enables the students to:**

1.	To familiarize the student in introducing and exploring various Network topologies and networking protocols
2.	To understand the use of client/server architecture in application
3.	To enable the student on how to approach for networking problems using networking simulation tools.
4.	To Design reliable servers using both TCP and UDP sockets
5.	Familiarwithnetworktoolsandnetworkprogramming.

### **Course Outcomes**

**After the completion of this course, students will be able to:**

CO1	Express programming & simulation for networking problems.
CO2	Understand of various aspects of networking devices
CO3	Design and implement simulation of a simple LAN and a WAN that meet a specific set of criteria
CO4	Identify the elements of a communication network
CO5	Simulate various OSI layer protocols using C/C++/ Java

### **Syllabus**

#### **List of Programs as Assignments:**

##### **1. Lab Assignment No: 1**

Q1. To familiarize with the Lab Network Topology, Locating different interfaces, routers and switches. Studying different pools of IP addresses.

Q2. Implement the data link layer framing methods such as character, character stuffing, and bit stuffing.

Q3. To learn and observe the usage of different networking commands e.g.PING, TRACEROUTE. Learning remote login using telnet session. Measuringtypical average delays between different locations of the network.

##### **2. Lab Assignment No: 2**

Q1. What is the IP of the machine you are using? Compare it with the IP of your neighbors. Are the IPs of your neighbors same? Why or Why not?

Q2. Ping” is a tool used to determine if a server is responding and to estimate the round triptime of a message sent to that server. Use the ping command for the following URLs and record the success or failure statistics along with the average round trip time.

- a) google.com
- b) facebook.com
- c) bitmesra.ac.in

Q3. Trace the route that is taken when you try to access:

- a) google.com
- b) facebook.com
- c) bitmesra.ac.in

Q4. Network Commands on Linux / Unix

### **3. Lab Assignment No: 3**

Q1. Implement on a data set of characters the three CRC polynomials – CRC 12, CRC 16 and CRC 32.

Q2. Implementation of Sub-netting and Super-netting.

Q3. To study different types of transmission media, various topologies, and configure modem of computer HUB and Switches.

### **4. Lab Assignment No: 4**

Q1. Write a C/C++ program to determine if the IP address is in Class A, B, C, D, or E.

Q2. Write a C/C++ program to determine if the IP address is in Class A, B, or C.

Q3. Write a C/C++ program to translate dotted decimal IP address into 32 bit address.

Q4. To implement a routing protocol and check its connectivity in a variable length subnet masked network

Q5. Write a C/C++ program to perform bit stuffing and de-stuffing.

### **5. Lab Assignment No: 5**

Q1. Implement Dijkstra’s algorithm to compute the Shortest path through a graph.

Q2. Take an example subnet graph with weights indicating delay between nodes. Now obtain Routing table at each node using distance vector routing algorithm

Q3. Take an example subnet of hosts. Obtain broadcast tree for it.

**6. Lab Assignment No: 6**

Q1. Build implementations of the Internet protocols

Q2. Implementation of Stop and Wait Protocol and Sliding Window Protocol.

Q3. Write a code simulating ARP /RARP protocols.

**7. Lab Assignment No: 7**

Q1. Create a socket for HTTP for web page upload and download

Q2. Write a code simulating PING and TRACEROUTE commands.

**8. Lab Assignment No: 8**

Q1. Study and implement model for Socket Programming and Client – Server model.

Q2. Experiments with NS2(or any other simulator) to study behavior (especially performance of) link layer protocols such as Ethernet and 802.11 wireless LAN..

**9. Lab Assignment No: 9**

Q1. Experimental study of application protocols such as HTTP, FTP, SMTP, using network packet sniffers and analyzers such as **Wireshark**. Small exercises in socket programming in C/C++/Java..

**10. Lab Assignment No: 10**

Q1. Take a 64 bit playing text and encrypt the same using DES algorithm.

Q2. Write a program to break the above DES coding

Q3. Using RSA algorithm encrypts a text data and Decrypt the same objective: To Understand and Implement Data Interpolation

**11. Lab Assignment No: 11**

Q1. Applications using TCP and UDP Sockets like d. DNS e. SNMP f. File Transfer

Q2. Study of Network simulator (NS). and Simulation of Congestion Control Algorithms using NS

Q3. Echo client and echo server b. Chat c. File Transfer

**Books recommended:**

**Text books**

## **COURSE INFORMATION SHEET**

Course code: CS302

Course title: **Database Management system Lab**

Pre-requisite(s): CS301 Database Management System

Co- requisite(s):

Credits: L:3    T:0    P: 0

Class schedule per week: 3

Class: B. Tech  
Semester / Level: V/III  
Branch: CSE/IT

### Course Objective

This course enables the students:

1.	Learn and practice data modeling using the entity-relationship and developing database designs.
2.	Understand the use of Structured Query Language (SQL) and learn SQL syntax.
3.	Understanding the basic principles of modeling of database using UML and apply normalization techniques to normalize the database system.
4.	Learn Multidimensional schemas suitable for data warehousing. And learn the Difference between OLTP (Online Transaction Processing) and OLAP (Online Analytical Processing).
5.	To demonstrate the principles behind the logical database design and Data Warehouse Modeling.

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Describe the fundamental elements of relational database management systems.
CO2	Explain the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.
CO3	Design ER-models to represent simple database application scenarios.
CO4	Convert the ER-model to relational tables, populate relational database and formulate SQL.
CO5	Improve the database design by normalization.

## SYLLABUS

### List of Programs as Assignments:

#### Lab Assignment No: 1

Objective: Implementation of DDL commands of SQL with suitable examples

- Create table
- Alter table
- Drop Table

#### Lab Assignment No: 2

Objective: Implementation of DML commands of SQL with suitable examples

- Insert
- Update
- Delete

#### Lab Assignment No: 3

Objective: Implementation of different types of function with suitable examples

- Number function
- Aggregate Function
- Character Function
- Conversion Function
- Date Function

#### **Lab Assignment No: 4**

Objective: Study & Implementation of PL/SQL.

#### **Lab Assignment No: 5**

Objective Implementation of different types of operators in SQL

- Arithmetic Operators
- Logical Operators
- Comparison Operator
- Special Operator
- Set Operation

#### **Lab Assignment No: 6**

Objective: Implementation of different types of Joins

- Inner Join
- Outer Join
- Natural Join etc..

#### **Lab Assignment No: 7**

Objective: Study & Implementation of SQL Triggers.

#### **Lab Assignment No: 8**

Objective:

- Creating Database /Table Space
- Managing Users: Create User, Delete User
- Managing roles:-Grant, Revoke.

#### **Lab Assignment No: 9**

Objective: Study and Implementation of

- Group By & having clause
- Order by clause
- Indexing

#### **Lab Assignment No: 10**

Objective: Study & Implementation of

- Sub queries
- Views

#### **Lab Assignment No: 11**

Objective: Study & Implementation of different types of constraints.

### **Books recommended:**

#### **TEXT BOOKS**

1. A.Silberschatz et.al - Database System Concepts, 5<sup>th</sup>Ed<sup>n</sup>, Tata Mc-Graw Hill, New Delhi – 2000.

#### **REFERENCE BOOKS**

1. Date C.J. - An Introduction to Database System, Pearson Education, New Delhi, 2005.
2. R.Elmasri, Fundamentals of Database Systems, Pearson Education, New Delhi, 2005.

**Course Evaluation:**

Day to day progressive evaluation, Lab Quizzes, Surprise Tests, Online Lab performance and Viva Voce

**Gaps in the syllabus (to meet Industry/Profession requirements):**

Implementing of real world problems

POs met through Gaps in the Syllabus: PO5&6

**Topics beyond syllabus/Advanced topics/Design:**

POs met through Topics beyond syllabus/Advanced topics/Design: Teaching through research papers.

**Course Delivery Methods**

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Assignments/Seminars
CD3	Laboratory experiments/teaching aids
CD4	Industrial/guest lectures
CD5	Industrial visits/in-plant training
CD6	Self- learning such as use of NPTEL materials and internets
CD7	Simulation

## COURSE INFORMATION SHEET

Course code: IT310

Course title: **Shell and Kernel Programming Lab**

Pre-requisite(s): Operating System, UNIX Programming

Co- requisite(s): NIL

Credits: L: 0 T: 0 P: 3

Class schedule per week: 3

Class: B. Tech

Semester / Level: V/III

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	To understand the basic concepts of UNIX & shell programming.
2.	Understand the basic operations of an operating system.
3.	To explore the function of a kernel.
4.	To understand the basic function of a device driver.
5.	To understand the structure of a file system.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Explain the design of Linux kernel components
2.	Experiencing the kernel by passive/active observation
3.	Extend the Linux kernel for understanding, self-satisfaction/falsification.
4.	Identify the current research trends in OS, Linux being the reference OS

5.	Illustrate the design of Linux kernel components
----	--

**Syllabus****Module I**

Introduction to UNIX, file system, system calls, AWK script, Bourne shell programming. (8L)

**Module II**

Korn Shell Programming, C Shell Programming, Different tools & Debuggers. (8L)

**Module III**

Introduction: OS concepts catch-up, Linux kernel overview, Extending the kernel: building a modified kernel, writing simple kernel modules, User-kernel interfacing: system calls, proc/sys, character devices, device memory maps, Kernel execution contexts: processes, threads, kernel threads, interrupts, bottom halves/soft IRQs. (8L)

**Module IV**

Process management: Linux kernel scheduler, context switching, kernel synchronization  
Memory management: Virtual memory, page cache, File systems: The VFS layer, Kernel-File system interfacing. (8L)

**Module V**

Generic block layer: Block I/O interfacing, kernel block I/O scheduler  
Device drivers: Device probe and software / hardware configurations, event registration, communication. (8L)

## COURSE INFORMATION SHEET

**Course code:** IT303

**Course title:** Internet and web technology

**Pre-requisite(s):**

**Co- requisite(s):**

**Credits:**        L: 3        T:0        P:0

**Class schedule per week:** 3

**Class:** B. Tech

**Semester / Level:** IV/III

**Branch:** IT

### Course Objectives

This course enables the students:

A.	To provide students with a fundamental understanding as to how an XHTML-compliant web site is developed, implemented, and maintained. XHTML
B.	To provide students with a fundamental understanding as to how an Cascading Style Sheets- is developed and implemented.
C.	To provide basic understanding of java script to help in designing of web pages.
D.	To understand the need of Dom model.

.E	To provide the role of xml in web design
----	--

## Course Outcomes

After the completion of this course, students will be able to do the following:

1.	Describe the components of the Internet and Web technology
2.	Analyse common Internet applications such as marketing, collaboration, electronic commerce and document management
3.	Explain the basics of Internet technology, such as http and the World Wide Web, HTML, and JavaScripts;
4.	Create WWW pages to serve as front-end to client/server, Internet applications
5	Analyzing and designing Internet applications and testing and documenting the solutions developed.

1. Write an HTML code to display your education details in a tabular format.
2. Write an HTML code to display your CV on a web page.
3. Write an HTML code to create a Home page having three links: About Us, Our Services and Contact Us. Create separate web pages for the three links.
4. Write an HTML code to create a login form. On submitting the form, the user should get navigated to a profile page.
5. Write an HTML code to create a Registration Form. On submitting the form, the user should be asked to login with this new credentials.
6. Write an HTML code to create your Institute website, Department Website and Tutorial website for specific subject.
7. Write an HTML code to illustrate the usage of the following:
  - ☐ Ordered List
  - ☐ Unordered List
  - ☐ Definition List
8. Write an HTML code to create a frameset having header, navigation and content sections.
9. Write an HTML code to demonstrate the usage of inline CSS.

10. Write an HTML code to demonstrate the usage of internal CSS.
11. Write an HTML code to demonstrate the usage of external CSS.
12. Write a Java script to prompt for users name and display it on the screen.
13. Design HTML form for keeping student record and validate it using Java script.
14. Write an HTML program to design an entry form of student details and send it to store at database server like SQL, Oracle or MS Access.
15. Write programs using Java script for Web Page to display browsers information.
16. Create an applet which will have a line, an Oval & a Rectangle
17. Writing program in XML and create a style sheet in CSS & display the document in internet explorer.
18. Write an XML program to display products
19. Write a program using PHP and HTML to create a form and display the details entered by the user

**Text books:**

## (Semester VI)

### COURSE INFORMATION SHEET

Course code: IT305

Course title: **Software Engineering**

Pre-requisite(s):

Co- requisite(s):

Credits: L:3    T:0    P:0

Class schedule per week: 3

Class: B. Tech  
Semester / Level: III  
Branch: CSE/IT

### Course Objectives

This course enables the students to:

1.	Students are effective team members, aware of cultural diversity, who conduct themselves ethically and professionally
2.	Students use effective communication skills and technical skills to assure production of quality software, on time and within budget.
3.	Students build upon and adapt knowledge of science, mathematics, and engineering to take on more expansive tasks.
4.	Able to increase level of self-reliance, technical expertise, and leadership.

### Course Outcomes

After the completion of this course, students will be:

1.	Explain the software engineering principles and techniques
2.	Apply Software Project Management Practices
3.	Apply the knowledge gained for their project work as well as to develop software following software engineering standards
4.	Develop self-reliance, technical expertise, and leadership.

### Syllabus

#### Module I

##### Introduction

Some Definitions, FAQs about software engineering, the evolving role of software, Software process models, Waterfall model, the prototyping model, spiral model, RAD and Incremental model, Management activities, Project planning and Project Scheduling. (8L)

#### Module II

##### Software Requirements

Functional and non-functional requirements, User requirements, System requirements, the software requirements document. IEEE standard of SRS, Quality of good SRS.

**Requirement Engineering Process:** Feasibility study, Requirements elicitation and analysis, Requirements validation, Requirement management. (8L)

#### Module III

##### Design Engineering

Design Process and Design Quality, Design Concepts, Design Models, Object oriented Design, UML: Class diagram, Sequence diagram, Collaboration diagram. (8L)

#### Module IV

##### Verification and Validation

Verification and Validation Planning, S/W inspection, static analysis.

##### Software Testing

Testing functions, Test case design, White Box testing, Black box testing, Unit testing, Integration Testing, System testing, Reliability. (8L)

#### Module V

Process metrics, Software Measurement, Software Project Estimation, Decomposition Techniques, Empirical Estimation Models, Quality assurance and standards, Quality planning, Quality control, S/W Maintenance in detail. (8L)

# COURSE INFORMATION SHEET

Course code: IT307

Course title: **Image Processing**

Pre-requisite(s): Discrete Mathematics,

Co- requisite(s): Data Structures

Credits: L: 3 T:0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level:

Branch: CSE/IT

## Course Objectives

This course enables the students:

1.	Understand the basic concept of Digital Image Processing
2.	To Learn the Fourier Transform& its application
3.	Understand the basic components of filters
4.	Understand the basic concept of Image Compression Fundamentals
5.	Understand the basic concept of Image Segmentation.

## Course Outcomes

After the completion of this course, students will be:

1.	Understand the concept of image formation, digitization, and role human visual system plays in perception of image data and spatial filtering techniques for enhancing the appearance of an image.
2.	Acquire an appreciation for various frequency based filtering techniques for enhancing the appearance of an image, duly applying them in different applications.
3.	Discern the difference between noise models, gain an insight into assessing the degradation function and realize different spatial and frequency based filtering techniques for reduction and removal of noise.
4.	Synthesize a solution to image compression using the concept of information theory and lossless and lossy compression techniques.
5.	Design and create practical solutions using morphological and image segmentation operators for common image processing problems and assess the results.

## Syllabus

### Module I

[8 L]

Introduction to Digital Image Processing, Elements of Visual Perception, Image Sensing & Acquisition, Sampling and Quantization, Basic Relationships between Pixels, Intensity Transformations, Histogram Processing, Spatial Convolution & Correlation, Smoothing Spatial Filters, Sharpening Spatial Filters.

### Module II

8 L]

Introduction to the Fourier Transform, Discrete Fourier Transform, Properties of the Two-Dimensional Fourier Transform, Image Smoothing using Frequency Domain filters, Image Sharpening using Frequency Domain filters, Selective Filtering, Basics of Fast Fourier Transform, Basics of: Walsh- Hadamard Transform; K-L Transform; Discrete Cosine Transform.

**Module III [8 L]**

Model of Image Degradation/Restoration Process, Noise Probability Density Functions, Restoration in presence of Noise only, Periodic Noise Reduction using Frequency Domain filtering, Circulant Matrices, Block Circulant Matrices, Unconstrained Restoration, Constrained Restoration, Basics of Inverse Filtering

**Module IV [8 L]**

Image Compression Fundamentals – Coding Redundancy, Interpixel Redundancy, Psychovisual Redundancy, Fidelity Criteria, Image Compression Models– Source Encoder and Decoder, Channel Encoder and Decoder, Elements of Information Theory, Error-Free Compression – Variable-Length Coding, Bit-Plane Coding, Lossless Predictive Coding. Lossy Compression – Lossy Predictive Coding, Transform Coding. Color Fundamentals, Color Models, Basics of Full Color Image Processing

**Module V [8 L]**

Morphological Image Processing-Preliminaries, Dilation and Erosion, Opening and Closing, Hit-or-Miss Transformation, Boundary Extraction, Hole Filling, Connected Components, Convex Hull, Thinning, Thickening, Skeletons, Pruning  
Image Segmentation- Fundamentals, Point, Line and Edge Detection, Thresholding, Region Based Segmentation, Segmentation based on color.

**Text books:**

## **COURSE INFORMATION SHEET**

Course code: MT123

Course title: **Business Communications**

Pre-requisite(s):

Co- requisite(s):

Credits: L: 3    T: 0    P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: VI/I  
Branch: CSE/IT

### Course Objectives

This course enables the students:

A.	To analyze and demonstrate writing and speaking processes through invention, organization, drafting, revision, editing, and presentation.
B.	To understand the importance of specifying audience and purpose and to select appropriate communication choices.
C.	To interpret and appropriately apply modes of expression, i.e., descriptive, expositive, Narrative, scientific, and self-expressive, in written, visual, and oral communication
D.	To participate effectively in groups with emphasis on listening, critical and reflective thinking, and responding.
.E	To develop the ability to research and write a documented paper and/or to give an oral presentation.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Apply business communication strategies and principles to prepare effective communication for domestic and international business situations.
2.	Utilize analytical and problem-solving skills appropriate to business communication.
3.	Participate in team activities that lead to the development of collaborative work skills.
4.	Select appropriate organizational formats and channels used in developing and presenting business messages
5.	Communicate via electronic mail, Internet, and other technologies and deliver an effective oral business presentation.

## Syllabus

### MT123: Business Communication

#### Module I(4 lectures)

##### **Introduction to Business Communication:**

Importance and Objectives of Business communication, Process of communication, Barriers to effective communication, Techniques of effective communication. Forms of communication (Written, Oral, audio-visual communication).

#### Module II(5 lectures)

##### **Managing Business Communication:**

Formal and Informal communication, Non- verbal communication (Body language, Gestures, Postures, Facial expressions). The cross cultural dimensions of business communication. Techniques to effective listening, methods and styles of reading.

### **Module III (5 lectures)**

Other aspects of communication:

Vocabulary:

Single word substitution, Idioms and phrases, Precis writing, Comprehension.

Group Discussions, Extempore, Principles of effective speech and presentations, Role playing.

### **Module IV: (6 lectures)**

Introduction to managerial writing:

Business letters: Inquiries, Circulars, Quotations, Orders, Acknowledgement, Claims & adjustments, Collection letters, Sales letters, Drafting of different resumes, Covering letters  
Applying for a job, Social correspondence, Invitation to speak.

Official Correspondence: Memorandum, Notice, Agenda, Minutes, Circular letters.

### **Module V: (3 lectures)**

#### **Report writing and Technical Proposals:**

Business reports, Types, Characteristics, Importance, Elements of structure, Process of writing, Order of writing, the final draft, check lists for reports.

Technical proposals, Definitions, types and format.

Text Books:

- T1. Communication Skills, Sanjay Kumar & PushpLata, Oxford University Press
- T2. Business Correspondence and Report Writing, R.C.Sharma, Krishna Mohan. McGraw Hill
- T3. Communication for Business, Shirley Taylor, V.Chandra, Pearson

Reference Books:

- R1. Business Communication- HorySankar Mukherjee, Oxford University Press
- R2. Basic Business Communication- .Lesikar I Flatley, McGraw Hill.
- R3. Business Communication Today ,Bovee, Thill and Chaterjee, Pearson

## COURSE INFORMATION SHEET

Course code: MT204

Course title: **Constitution of India**

Pre-requisite(s):

Co- requisite(s):

Credits: L: 2 T: 0 P: 0

Class schedule per week: 2

Class: B. Tech

Semester / Level: VI/II

Branch: CSE/IT

### Course Objectives:

This course enables the students:

A.	To describe the importance and role of Constitution of India
B.	To resolve the social problems and issues.
C.	To maintain and bolster the unity and integrity in the society.
D.	To formulate and design policies in accordance with the constitutional provisions.

### Course Outcomes

After the completion of this course, students will be:

1.	Outline the need and importance of the Indian constitution.
2.	Explain the fundamental rights and duties of the citizens of India.
3.	Relate appropriate constitutional provisions with relevant social issues
4.	Describe the role of different departments of government.
5.	Critique the Government policies and programmes designed for the society at large.

## Syllabus

Module 1: Introduction to the Constitution of India, Salient Features of the Constitution: Sources and constitutional history, Features: Citizenship, Preamble, Fundamental Rights and Duties, Directive Principles of State Policy.

Module 2: Union and State Executives: President and Prime Minister, Council of Ministers, Cabinet and Central Secretariat, Lok Sabha, Rajya Sabha. Governor: Role and Position, Chief Ministers and Council of ministers.

Module 3: The Indian Judicial System – The Supreme Court and The High Court’s – composition, Jurisdiction and functions, The Role of the Judiciary.

Module 4: Local Government- District’s Administration: Role and Importance, The Panchayatas – Gram Sabha, Constitution and Composition of Panchayatas ,Constitution and Composition of Municipalities

Module 5: Miscellaneous- Election Commission: Role and Functioning, Chief Election Commissioner and Election Commissioners. State Election Commission: Role and Functioning, Institute and Bodies for the welfare of SC/ST/OBC and women.

### **Suggested Readings**

1. The Constitution of India by “ Ministry of Law India” Kindle Edition
2. Constitutional History of India by Prof.M.V.PYLEE-S.Chand Publishing
3. Indian Administration by Avasti and Avasti-Lakshmi Narain Agarwal Educational Publishers.2017 edition.
4. Introduction to the Constitution of India by D DBasu by Lexis Nexis : 20th edition.
5. Constitution of India V.N.Shukla’s EBC Explorer Edition 13th ,2017

**PROGRAM ELECTIVE -II**

**COURSE INFORMATION SHEET**

Course code: IT326

Course title: **Wireless Sensor Networks**

Pre-requisite(s): IT301 Data Communication and Computer Networks

Co-requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	Familiarize with the principles of sensor nodes, network deployment and architectures.
2.	Know the data transmission and routing protocols. Know the differences among different networks.
3.	Analyze or compare the performance of different routing and MAC protocol
4.	Evaluate the performance of different MAC protocols and clustering algorithm
5.	Compute the throughput and channel utilization for different network scenarios.

### Course Outcomes

After the completion of this course, students will be:

1.	Obtain a broad understanding about the network architecture of wireless sensor network.
2.	Understand all basic characteristics of wireless sensor networks and sensor nodes.
3.	Understand the principles of data transmission, clustering algorithm and routing protocols.
4.	Analyse and evaluate different constraint of wireless sensor network, e.g., coverage, powermanagement, security and data collisions.
5.	Design and development of new sensor network architecture.

### Syllabus

#### Module I

**Introduction:** Wireless channel and communication fundamentals, Features of Wireless sensor network, Design principles for WSNs, Service interfaces of WSNs and Gateways, Applications, Hardware components, Sensor deployment mechanism. (6L)

#### Module II

**Network and Component Technologies:** Topologies and characteristics, Sensor network characteristics, energy consumption model, Power management, Localization, hierarchical and cluster based topology control. (10L)

### **Module III**

**Data Transmission and Routing:** Data processing and aggregation, Data storage, Network clustering protocols, Multi-hop communication protocols, Energy efficient routing, Data aggregation and data centric routing. (8L)

### **Module IV**

**Protocols: MAC Protocols,** Framing and error control in WSNs, Medium access control protocols, Congestion control and rate control protocols. (8L)

### **Module V**

#### **QOS Issues:**

Coverage and deployment, Reliable data transport, Single packet and block delivery, Congestion control and rate control, Collisions, Collision avoidance mechanism. (8L)

#### **Text books:**

Karl Holger and Willig Andreas, “Protocols and Architectures for Wireless Sensor Networks”.(T1)

Callaway Jr. Edgar H. and Callaway Edgar H., “Wireless Sensor Networks: Architectures and Protocols”.(T2)

#### **Reference books:**

Zhang Yan, Jejunum, Hu Honglin, “Wireless Mesh Networking, Architecture, Protocols and Standards”.(R1)

## COURSE INFORMATION SHEET

**Course code:** IT327

**Course title:** Wireless Sensor Networks Lab

**Pre-requisite(s):** IT326 Wireless Sensor Networks

**Co- requisite(s):**

**Credits:** L: 0 T: 0 P: 3

**Class schedule per week:** 3

**Class:** B.Tech

**Semester / Level:** III

**Branch:** CSE/IT

### Course Objectives

This course enables the students to:

1.	In-depth understanding of specialist bodies of knowledge within the engineering discipline.
2.	Application of established engineering methods to complex engineering problem solving.
3.	Fluent application of engineering techniques, tools and resources
4.	High levels of technical competence in the field
5.	Be able to apply problem solving approaches to work challenges and make decisions using sound engineering methodologies

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Apply knowledge of wireless sensor networks(WSN) to various application areas.
CO2	Design and implement WSN and IoT.
CO3	Conduct performance analysis of WSN.

## Syllabus

### List of Programs as Assignments:

1. Wireless technology for distributed sensor networks in perspective of deployment mechanisms
2. Clustering techniques in WSN; multi-hop to single hop communication analysis
3. Analyzing Routing in WSN: AODV, DSR
4. Industrial WSN protocols: ZigBee, Bluetooth applications
5. WSN network design and implementation; in perspective of gateway-based communications
6. Employing of wireless technologies in IoT.
7. IoT Structure and Framework

## COURSE INFORMATION SHEET

Course code: CS322

Course title: **Simulation and Modelling**

Pre-requisite(s): CS201 Data Structure

Co- requisite(s):

Credits: L: 3 T:1 P:0

Class schedule per week: 4

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	To Characterise engineering systems in terms of their essential elements, purpose, parameters, constraints, performance requirements, sub-systems, interconnections and environmental context.
2.	To understand Engineering problem modelling and solving through the relationship between theoretical and mathematical
3.	To provide Mathematical modelling real world situations related to engineering systems development.
4.	To able Generate random numbers and random varieties using different techniques.
5.	To provide the knowledge of queuing theory to solve real life problem

### Course Outcomes

After the completion of this course, students will be able to do the following:

1.	Define basic concepts in modeling and simulation (M&S)
2.	Classify various simulation models and give practical examples for each category
3.	Analyze the behavior of a dynamic system and create an analogous model for a dynamic system.
4.	Analyze and test random number variates and apply them to develop simulation models
5.	Develop a real-life model using queuing system

### Syllabus

#### Module I

The concepts of a system, System Environment, Stochastic Activities, continuous and discrete systems, System Modeling, Types of models. System Studies: Subsystem, A Corporate Model, Environment segment, Production Segment, Management Segment, full Corporate Model, Types of System study, System Analysis, System Design, System Postulation. (7L)

#### Module II

The technique of simulation, the Monte Carlo method, comparison of simulation and analytical methods, experimental nature of simulation, types of system simulation, numerical computation technique for continuous & discrete models, distributed lag models, cobweb models. Continuous system models, differential equations, analog computers & methods, hybrid computers, CSSLs, CSMP-III, Feedback Systems, Simulation of an Autopilot. (8L)

#### Module III

Exponential Growth & decay models, modified exponential growth models, logistic curves, generalization of growth models, system dynamics diagrams, Simple system dynamics diagrams, multi-segment models, representation of time delays. (8L)

#### **Module IV**

Evaluation of continuous probability functions, continuous uniformly distributed random numbers, a uniform random number numbers, generating discrete distributions, non-uniform continuously distributed random numbers, the rejection method. Random numbers Generators: Techniques for generating random numbers. Test for random numbers. Random vitiate Generation: Inverse transform technique, exponential distribution, uniform distribution. (8L)

#### **Module V**

Queuing disciplines, measures of queues. Discrete events, representation of time, generation of arrival patterns, simulation of a telephone system, delayed calls, Simulation programming tasks, measuring utilization and occupancy. (9L)

#### **Text books:**

Gordon Geoffrey, System Simulation, 2<sup>nd</sup> Edition, Pearson Education, 2007. (T1)  
Banks J., Carson J. S. , Nelson B.L., Nicol D.M., Discrete-Event System Simulation, 4<sup>th</sup>Edn, Pearson Education, 2007. (T2)

### COURSE INFORMATION SHEET

Course code: IT328

Course title: **Pattern Recognition**

Pre-requisite(s):

Co- requisite(s): NIL

Credits: L: 3 T: 0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	Be familiar with both the theoretical and practical aspects Pattern Recognition.
2.	Have described the foundation of pattern formation, measurement, and analysis.
3.	Understand the mathematical and computer aspects of while extracting features of an object.
4.	Learn the techniques of clustering and classification for various applications.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Apply their knowledge on Real World Problems while converting these problems to computer compatible problems for Pattern Recognition.
2.	Solve Decision making model using Statistical and Mathematical Decision Theory.
3.	Design clusters for various Pattern using classical and Modern clustering techniques.
4.	Analyzing various Techniques for Pattern Classification and Clustering.
5.	Develop Model for Pattern classification through Probabilistic or fuzzy.

## Syllabus

### Module I

Introduction: Feature Vectors, Classifiers, Supervised, Unsupervised, MATLAB Tools. Classifiers Based on Bayesian Theory, Linear Classifiers, Nonlinear Classifiers. (10L)

### Module II

Feature Selection, Feature Generation I: Data Transformation and Dimensionality Reduction, Feature Generation II. (10L)

### Module III

Template Matching, Context Dependent Classification, Supervised Learning. (10L)

### Module IV

Clustering: Basic Concepts, sequential Algorithms. (5L)

### Module V

Hierarchical algorithms, Fuzzy clustering, probabilistic clustering, Hard Clustering, Optimization. (5L)

### Text Books:

Theodoridis S., Koutroumbas K., Elsevier, "Pattern Recognition", 5<sup>th</sup> Edition 2015.(T1)  
Murty N. Narshima "Pattern Recognition", Springer, University Press 2<sup>nd</sup> edition, 2015.(T2)

### Reference Book:

Duda R.O., Hart E. Peter, Stork G. David, "Pattern Classification" 2<sup>nd</sup> Edition, John Wiley, New York, 2002.(R1)

## COURSE INFORMATION SHEET

Course code: IT329

Course title: **Pattern Recognition Lab**

Pre-requisite(s): IT328 Pattern Recognition

Co- requisite(s): NIL

Credits: L: 0 T: 0 P: 3

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	Apply their knowledge on Real World Problems while converting these problems to computer compatible problems for Pattern Recognition.
2.	Solve Decision making model using Statistical and Mathematical Decision Theory.
3.	Design clusters for various Pattern using classical and Modern clustering techniques.
4.	Analyzing various Techniques for Pattern Classification and Clustering.
5.	Develop Model for Pattern classification through Probabilistic or fuzzy.

### Course Outcomes

After the completion of this course, students will be able to:

1.	formulate and describe various applications in pattern recognition
2.	understand the Bayesian approach to pattern recognition
3.	Be able to mathematically derive, construct, and utilize various classifiers both theoretically and practically.
4.	be able to identify the strengths and weaknesses of different types of classifiers
5.	validate and assess different clustering techniques

### Syllabus

1. Implement a function for extracting the colour histogram of an image.
2. Read all the images from the training set. For each image compute the colour histogram with general bin size  $m$  and save it as a row in the feature matrix  $X$ . Save the corresponding class label in the label vector  $y$ .
3. Implement the k-NN classifier for an unknown image and for a general  $K$  value.

4. Evaluate the classifier on the test set by calculating the confusion matrix and the overall accuracy.
5. Try out different values for the number of bins for the histogram and the parameter  $K$  to see which feature attains the best performance.
6. Convert the input image into Luv or HSV colour-space before histogram calculation.

## **COURSE INFORMATION SHEET**

Course title: **Computer Graphics**

Pre-requisite(s): CS206 Design and Analysis of Algorithm

Co- requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### **Course Objectives**

This course enables the students to:

1.	To understand different hardware used for graphical requirement
2.	To perform visual computations for geometrical drawings.
3.	To display 3D objects in a 2D display devices using projection techniques
4.	To model 3D
5.	To create realistic images using color and shading techniques

### **Course Outcomes**

After the completion of this course, students will be:

1.	Able to understand different hardware used for graphical requirement.
2.	Able to perform visual computations for geometrical drawings.
3.	Able to display 3D objects in a 2D display devices using projection techniques
4.	Able to model 3D objects
5.	Able to create realistic images using color and shading techniques

## **Syllabus**

### **Module I**

#### **Introduction and Overview of Graphics Systems**

Use of Computer graphics, Video Display Devices, Raster and Random Scan Displays, Colour CRT Monitors, Flat Panel Displays, Three-Dimensional Viewing Devices, Stereoscopic & Virtual Reality, Graphics system architecture, Input Devices, Graphics Software.

#### **Output Primitives**

Points and Lines, Line Drawing Algorithms (DDA & Bresenham's), Circle and Ellipse Generating Algorithms, Conic Sections, Filling Polygons, Pattern Filling, Thick Primitives, Line Style and PenStyle, Generating Characters, Aliasing and Antialiasing. (7L)

### **Module II**

#### **Geometric Transformations**

Two dimensional transformations and their matrix representations, Translation, Rotation, Scaling, Reflection, Shears, Homogeneous Coordinates, Composite Transformations, transformations between Coordinate Systems, Affine transformations, 2-Dimensional viewing pipeline, Window-to-Viewport Coordinate transformation, Clipping-Point, Line clipping-Cohen Sutherland, Liang Barsky, Polygon clipping – Sutherland Hodgeman, weilerArtherton, Curve and Text Clipping, Three Dimensional Transformations, Translation, Rotation, Scaling, Reflection, Shears.

(8L)

### **Module III**

#### **Three Dimensional Concepts and Object Representation**

Three Dimensional Display Methods, Polygon Surfaces, Curved Lines & Surfaces, Quadric Surfaces, Spline Representations, Cubic Spline interpolation methods, Hermite Interpolation, Bezier Curves and Surfaces, Properties of B-splines, Fractal.

#### **Three Dimensional Transformations and Viewing**

Three dimensional viewing pipe line, Projections- Parallel and Perspective, Projection Transformations, Clipping. (7L)

### **Module IV**

#### **Color Model and Color application**

Properties of light, Standard primaries and chromaticity diagram, XYZ Color model, RGB color model. YIQ color model, HSV color model, HLS color model

#### **Illumination Model and Surface Rendering**

Light sources, Basic Illumination Models, Ambient light, Defuse and specular reflection. Shadows, Transparency, Assigning intensity levels, Polygon Rendering Methods, Constant intensity shading, Gourad shading, Phong shading, Detail. (7L)

### **Module V**

#### **Visible Surface Detection Methods**

Classification of Visible Surface Detection Algorithms, Back Face Detection, Depth Buffer Method, A-Buffer Method, Scan-Line Method, Depth Sorting Method, BSP-Tree Method & Area Subdivision Method. Octrees, Ray casting method.

#### **Graphical User Interfaces and Interactive Input Methods**

The User Dialogues, Input of graphical data.

#### **Computer Animation**

Design of animation sequences, General computer animation functions, Raster animation, Computer animation languages, Key frame systems. (7L)

Pre-requisite(s):

Co- requisite(s):

Credits: L: 0 T: 0 P: 3

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students:

A.	Able to understand different hardware used for graphical requirement.
B.	Able to perform visual computations for geometrical drawings.
C.	Able to display 3D objects in a 2D display devices using projection techniques
D.	Able to create realistic images using color and shading techniques
E.	Able to model 3D objects

### Course Outcomes

After the completion of this course, students will be able to:

1.	To list the basic concept used in Computer Graphics
2.	To describe the importance of viewing and projections.
3.	To implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
4.	To design an application with the principles of Computer Graphics
5.	To define the fundamentals of animation, virtual reality and its related technologies.

### Syllabus

1. Study of basic graphics functions defined in “graphics.h”.
2. Write a program to draw a line using Bresenham’s Algorithm
3. Write a program to draw a line using DDA Algorithm.
4. Write a program to draw a line using Mid-Point Algorithm.
5. Write a program to draw a Circle using Mid-Point Algorithm.
6. Write a program to draw a Ellipse using Mid-Point Algorithm.
7. Programs using 2-D transformations in C.
8. Implement Polygon filling algorithms [Flood-Fill Algorithm] in C.
9. Program for Cohen Sutherland Line clipping algorithm in C.
10. Write a program to implement reflection of a point, Line.
11. Write a program to rotate a circle around any arbitrary point or around the boundary of another circle.
12. Write a program to implement polygon filling.
13. Programs to study 3-D transformations in C.

## **COURSE INFORMATION SHEET**

Course code: IT340

Course title: **Machine Learning**

Pre-requisite(s): CS206 Design and Analysis of Algorithm

Co- requisite(s):NIL

Credits: L: 3 T: 1 P: 0

Class schedule per week: 4

Class: B. Tech  
Semester / Level: IV  
Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	To understand the basic concept of machine learning.
2.	To explore the application of machine learning.
3.	To understand the concept of supervised learning.
4.	To learn the advantage of neural network.
5.	To learn the utility of clustering techniques.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Formulate machine learning problems corresponding to different applications: data, model selection, model complexity
2.	Demonstrate understanding of a range of machine learning algorithms along with their strengths and weaknesses
3.	Implement machine learning solutions to classification, regression, and clustering problems
4.	Design and implement various machine learning algorithms in a range of real-world applications
5.	Evaluate and analyse the performance of machine learning algorithm or a system based on machine learning algorithm.

### Syllabus

#### Module I

##### Introduction to Machine learning

Machine Learning – what and why? Basics of Linear Algebra and Statistics, Overview of target function representations; Linear Regression. (8L)

#### Module II

##### Supervised Learning

Basics of Feature Selection and Evaluation, Decision Tree, Overfitting and Pruning, Logistic regression, Support Vector Machine and Kernel; Noise, bias-variance trade-off, under-fitting and over-fitting concepts. (10L)

#### Module III

##### Neural Networks

Perceptions: representational limitation and gradient descent training. Multilayer networks and back propagation. Hidden layers and constructing intermediate, distributed representations. Overfitting, learning network structure, recurrent networks. (8L)

## Module IV

### Unsupervised and Semi Supervised Learning

Learning from unclassified data. Clustering. Hierarchical Agglomerative Clustering. k-means partitional clustering. Expectation maximization (EM) for soft clustering. Semi-supervised learning with EM using labelled and unlabeled data.

(8L)

## Module V

### Ensemble

Committees of multiple hypotheses, bagging, boosting, active learning with ensembles, (6L)

### Text book:

1. Mitchell Tom, Machine Learning, Latest Edition, Mc-Graw Hill.(T1)

### Reference books:

## COURSE INFORMATION SHEET

Course code: IT341

Course title: **Machine Learning Lab**

Pre-requisite(s):

Co- requisite(s):

Credits: L: 0 T: 0 P: 1.5

Class schedule per week: 3

Class: B. Tech

Semester / Level: 4

Branch: CSE/IT

### **Course Objectives:**

This course enables the students:

A.	Make use of Data sets in implementing the machine learning algorithms
B.	To choose the appropriate machine learning design method for a specified application.
C.	Implement the machine learning concepts and algorithms in any suitable language of choice.
D.	Analyze and compare the different algorithms

### **Course Outcomes:**

After the completion of this course, students will be able to:

1.	Gain knowledge about basic concepts of Machine Learning
2.	Identify machine learning techniques suitable for a given problem
3.	Solve the problems using various machine learning techniques
4.	Apply Dimensionality reduction techniques
5.	Design application using machine learning techniques.

### **Syllabus:**

1. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
2. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.

3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
4. Build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriate data sets.
5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
6. Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.
7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.
8. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.
9. Write a program to implement k-Nearest Neighbor algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.
10. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs

### **OPEN ELECTIVES-II**

### **COURSE INFORMATION SHEET**

Course code: CS206

Course title: **Design and Analysis of Algorithm**

Pre-requisite(s): Data Structure

Co- requisite(s): Algorithms Lab

Credits: L: 3 T: 0 P: 0

Class schedule per week: 3  
Class: B. Tech  
Semester / Level: II/2  
Branch: CSE/IT

### Course Objectives

This course enables the students to:

1.	To analyze the performance of recursive and non-recursive algorithms.
2.	To understand various algorithm design techniques.
3.	To use of different paradigms of problem solving.
4.	To find efficient ways to solve a given problem.
5.	To compare various algorithms of a given problem.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Define the concepts and mathematical foundation for analysis of algorithms.
2.	Explain different standard algorithm design techniques, namely, divide & conquer, greedy, dynamic programming, backtracking and branch & bound.
3.	Demonstrate standard algorithms for fundamental problems in Computer Science.
4.	Design algorithms for a given problem using standard algorithm design techniques.
5.	Analyze and compare the efficiency of various algorithms of a given problem.

## SYLLABUS

### Module I

#### Algorithms and Complexity

Introduction, Algorithm Complexity and various cases using Insertion Sort, Asymptotic Notations, Time complexity of Recursive Algorithm, Solving Recurrences using Iterative, Recursion Tree and Master Theorem. (8L)

### Module II

#### Divide and Conquer

Discussion of basic approach using Binary Search, Merge Sort, Quick Sort, Selection in Expected linear time, Maximum Subarray, Matrix Multiplication, Introduction of Transform and Conquer and AVL Tree. (8L)

### Module III

#### Dynamic Programming

Introduction and Approach, Rod Cutting, LCS, Optimal BST, Transitive closure and All-pair Shortest Path, Travelling Salesperson Problem. (8L)

### Module IV

#### Greedy and other Design Approaches

Introduction to greedy using fractional knapsack, Huffman Code, Minimum Spanning Tree – Prim and Kruskal, Single Source Shortest Path Dijkstra's and Bellman-Ford, Introduction to

Backtracking using N-Queens problem, Introduction to Branch and Bound using Assignment Problem or TSP. (8L)

## Module V

### NP Completeness and Other Advanced Topics

Non-deterministic algorithms – searching and sorting, Class P and NP, Decision and Optimization problem, Reduction and NPC and NPH, NP Completeness proof for: SAT, Max-Clique, Vertex Cover, Introduction to Randomized Algorithms, Introduction to Approximation Algorithms. (8L)

### Text Book:

2. Cormen Thomas H. et al., Introduction to Algorithms. 3<sup>rd</sup> Edition, PHI Learning, latest edition.(T1)

### **COURSE INFORMATION SHEET**

Course code: CS275

Course title: **Bio Informatics**

Pre-requisite(s): Programming for Problem Solving

Co- requisite(s):

Credits: L:3    T:0    P:0

Class schedule per week: 3

Class: B.Tech

Semester / Level: II

Branch: CSE/IT

### **Course Objective**

This course enables the students to:

1.	To enable the students to understand the tools used in Bioinformatics & how to use them.
2.	Understand the basic features of databases.
3.	Analyze the importance of sequence similarity.
4.	Understand the basic features of Phylogenetic Analysis.

### **Course Outcomes**

After the completion of this course, students will be:

1.	Identify the scope of Bioinformatics.
2.	Utilize the biological databases to retrieve various biological information
3.	Apply the tools to do biological analysis.
4.	Identify and solving various biological challenges.
5.	Analyze Phylogenetic tree to find a relation in between proteins.

## Syllabus

### Module I

**Introduction to Bioinformatics-** Historical overview, Bioinformatics Applications, Molecular Biology and Bioinformatics, Central Dogma of Molecular Biology.

**Biological Databases and Information Retrieval-** Major Databases in Bioinformatics, Tools for Web Search, Data Retrieval Tools, Data Mining in Bioinformatics. (8L)

### Module II

**Genome Analysis and Gene Mapping-** Introduction, The Sequence Assembly Problem, Physical Maps, Cloning, Genome Sequencing, Application of Genetic Maps, Sequence Assembly Tool, The Human Genome Project. (8L)

### Module III

**Alignment of Pair of Sequences-** Motivation, Methods of Sequence Alignment, Measuring Sequence Detection Efficiency

**Alignment of Multiple Sequences-** Methods of Multiple Sequence Alignment, Evaluating Multiple Alignments, Applications. (8L)

### Module IV

**Phylogenetic Analysis-** Introduction, Terminologies, Tree Topologies, Gene Trees, Methods of Phylogenetic Analysis, Tree Evaluation, Problems in Phylogenetic Analysis, Tools. (8L)

### Module V

**Tools for Similarity Search and Sequence Alignment-** FASTA, BLAST, Comparison, Other Programs

**Gene Identification and Prediction-** Introduction, Basis of Gene Prediction, Pattern Recognition, Gene Prediction Methods, Other Gene Prediction Tools. (8L)

### Text Books:

Course code:IT270

Course title: **Introduction to R**

Pre-requisite(s): Nil

Co- requisite(s):

Credits: L:0 T:1 P:2

Class schedule per week:5

Class: B. Tech

Semester / Level: II

Branch: CSE/IT

### Course Objectives

- |    |                                   |
|----|-----------------------------------|
| 1. | To develop problem solving skills |
|----|-----------------------------------|

2.	To learn programming and to solve problems using computers
3.	To learn Data Manipulation, Analysis and Visualization using Computers
4.	To introduce students to the key concepts and ideas of a statistical computing environment
	To introduce students to fundamental concepts in (scientific) programming in general.

This course enables the students:

### Course Outcomes

After the completion of this course, students will be to do the following:

1.	Design programs with Interactive Input and Output, utilizing arithmetic expression, repetitions and decision making
2.	Design programs using the fundamental data structures in R
3.	Develop programs in R interfacing files and URLs
4.	Solve Mathematical problems using R
5.	Design graphs and simulations in R

### Syllabus

#### Module I

**Introduction-** R reserved words, Variables and Constants, Operators, Operator Precedence

**Getting Data In and Out of R** –Accessing the Keyboard and Monitor, Reading in Larger Datasets. (6L)

#### Module II

**Control Statements-** if ..else, for loop, while loop, repeat loop, break and next

**Data Structures-** Vectors, Arrays, Matrices, Lists, Data Frames, Factors, Operations on Dates and Times. (7L)

#### Module III

**Strings:** Overview of String Manipulation Functions

**Functions:** Function Syntax, Environment and Scope, Recursive Function

**Interfaces to the Outside World:** File Connections, Reading Lines of a Text File Reading From a URL Connection. (7L)

#### Module IV

**Maths in R-** Math Functions, Functions for Statistical Distributions, Sorting, Linear Algebra Operations, Set Operations.

**Simulation** -Generating Random Numbers, Simulating a Linear Model, Random Sampling. (8L)

#### Module V

**Graphics-**Creating Graphs, Customising Graphs

**Introduction to Object Oriented Features-** Concept of Class and Object, S3 Classes, S4 Classes. (7L)

### Text books:

### COURSE INFORMATION SHEET

Course code: IT271

Course title: **Introduction to Python**

Pre-requisite(s):

Co- requisite(s):NIL

Credits: L:0 T:1 P:2

Class schedule per week:5

Class: B. Tech

Semester / Level: II

Branch: CSE/IT

## Course Objectives

This course enables the students:

1.	To facilitate skills required to Install and run the Python interpreter
2.	To facilitate skills required to Create and execute Python programs
3.	To introduce the Understanding the concepts of file I/O
4.	To provide skills to read data from a text file using Python
5.	To discover the interesting patterns using appropriate Python visualization libraries

## Course Outcomes

After the completion of this course, students will be able to do the following:

1.	Show how to convert the problems into algorithms
2.	Analyze and develop the algorithms to Python programs.
3.	Design programs with Interactive Input and Output, utilizing arithmetic expression repetitions, decision making, arrays.
4.	Develop modular Python programs using functions.
5.	Design programs using file Input and Output.

## Syllabus

### Module I

[6 L]

**Problem Analysis**-Formal Definition of a Problem, Algorithms, Flowcharts, Examples for Algorithms and Flowcharts

**Introduction to Python**- Variables, Operators, Expressions, Evaluation of Expressions, String Operations, Input and Output functions

### Module II

[7 L]

**Control Statements**- Decision making statements, Iterative Statements, Loop Control Statements

**Strings and Lists**- String Operations, Tuples and Dictionaries-Operations and Examples

### Module III

[7 L]

**Functions**- Function Definition and Call, Mathematical functions, User defined Functions, Parameters and Arguments, Type Conversion and Coercion

### Module IV

[8 L]

**Files** – Different File Operations, File Object Attributes, Directories

**Exceptions**- Except clause, Exception with arguments, Raising an Exception, User Defined Exceptions

### Module V

[7 L]

**Introduction to Classes and Objects**- Object Oriented Features, Attributes, Instances, Garbage Collection

### COURSE INFORMATION SHEET

Course code: CS271

Course title: **Cyber Law and Security**

Pre-requisite(s): Nil

Co- requisite(s):

Credits: L: 3 T: 0 P: 0  
Class schedule per week: 3  
Class: B. Tech  
Semester / Level: II  
Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	To understand the necessity of cyber laws.
2.	To explore the Constitutional & Human Rights Issues in Cyberspace
3.	To understand the criteria for Cyber Stalking/Harassment
4.	To understand the different aspects of cyber crimes

### Course Outcomes

After the completion of this course, students will be able to:

1.	Construct a strategy to Safeguard the society from cybercrime.
2.	Organize the evidence in terms of court terminology.
3.	Define the legal issues and its applications.
4.	Apply Computer forensics and digital detective and various processes, policies and procedures.
5.	Compose the techniques to produce data from computer and hand held devices.

### Syllabus

#### Module I

##### Introduction

Computers and its Impact in Society, Overview of Computer and Web Technology, Need for Cyber Law, Cyber Jurisprudence at International and Indian Level.

##### Cyber Law - International Perspectives

UN & International Telecommunication Union (ITU) Initiatives, Council of Europe - Budapest Convention on Cybercrime, Asia-Pacific Economic Cooperation (APEC), Organization for Economic Co-operation and Development (OECD), World Bank, Commonwealth of Nations, Indian Context of Jurisdiction and IT Act, 2000, International Law and Jurisdictional Issues in Cyberspace. (8L)

#### Module II

##### Constitutional & Human Rights Issues in Cyberspace

Freedom of Speech and Expression in Cyberspace, Right to Access Cyberspace – Access to Internet, Right to Privacy, Right to Data Protection

##### Cyber Crimes & Legal Framework

Cyber Crimes against Individuals, Institution and State, Hacking, Digital Forgery, Cyber Stalking/Harassment, Cyber Pornography, Identity Theft & Fraud, Cyber terrorism, Cyber Defamation, Different offences under Indian IT Act, 2000. (8L)

#### Module III

##### Cyber Torts

Cyber Defamation, Different Types of Civil Wrongs under the IT Act, 2000

##### Intellectual Property Issues in Cyber Space

Interface with Copyright Law, Interface with Patent Law, Trademarks & Domain Names Related issues. (8L)

#### **Module IV**

Introduction to Cybercrime, Classifications of Cyber Crimes, Local and Global perspectives on Cybercrime, Cyber offences, Cyberstalking, Cybercrime and cloud computing, cybercrimes through hand held devices., Tools and Methods used in Cybercrime, phishing, steganography, attacks on wireless network. (8L)

#### **Module V**

Understanding Digital forensic, Forensics science, computer forensics, and digital forensics. Criminalistics, Analysis of cyber-criminalistics area, Holistic approach to cyber-forensics, Computer forensic tools, Forensics of Hand held devices, tools for hand held device forensics., intellectual property in the cyberspace, The ethical dimension of Cybercrimes. (8L)

#### **Text Books:**

**(SEMESTER VI-LABORATORIES)**

**COURSE INFORMATION SHEET**

Course code: IT306  
Course title: **Software Engineering Lab**  
Pre-requisite(s):  
Co- requisite(s):  
Credits: L: 0 T:0 P: 3  
Class schedule per week: 3  
Class: B. Tech  
Semester / Level: III  
Branch: CSE/IT

### **Course Objectives**

This course enables the students to:

1.	Familiarize the students with the fundamental concepts of Software Engineering
2.	Impart state-of-the-art knowledge on SRS and UML
3.	Explore case studies to demonstrate practical applications of different concepts
4.	Provide a platform where they can solve real life problems

### **Course Outcomes**

After the completion of this course, students will be able to:

CO1	Prepare efficient models for development of software for various projects
CO2	Collect the requirements the client wants for the software being produced
CO3	Design the UML diagrams necessary for the software being developed
CO4	Create and specify feasible software designs based on the requirements/specifications
CO5	Assess the extent and costs of a project with the help of several different assessment methods

## **SYLLABUS**

### **List of Programs as Assignments:**

#### **1. Lab Assignment No: 1**

Objective: To Understand and Implement Identification of Requirements from Problem Statements

- Q1. To consider the problem statement for a project to be developed and list out the ambiguities, inconsistencies and incompleteness of the problem statement.
- Q2. To identify different functionalities to be obtained from a system and characteristics that a system should have, but not possessed by the system itself

## **2. Lab Assignment No: 2**

Objective: To Understand and Implement Estimation of Project Metrics

- Q1. To estimate the minimum size of the team one would require to develop a project through application of intermediate COCOMO.
- Q2. To use Halstead's metrics to estimate the effort required to recreate a program in JAVA from C.

## **3. Lab Assignment No: 3**

Objective: To Understand and Implement Modeling UML Use Case Diagrams and Capturing Use Case Scenarios

- Q1. To draw a use case diagram for the given case study.
- Q2. To identify the primary and secondary actors for the system and generalization of use cases and «include» stereotypes to prevent redundancy in the coding phase.

## **4. Lab Assignment No: 4**

Objective: To Understand and Implement E-R Modeling from the Problem Statements

- Q1. To identify the possible entity sets, their attributes, and relationships for the given case study.
- Q2. To draw an ER diagram for the given case study.

## **5. Lab Assignment No: 5**

Objective: To Understand and Implement Identification of Domain Classes from the Problem Statements

- Q1. To identify potential classes and their attributes for the given case study.
- Q2. To utilize expert knowledge on the subject matter to identify other relevant classes.

## **6. Lab Assignment No: 6**

Objective: To Understand and Implement Identification of Components from the Problem Statements

- Q1. To identify potential components for the given case study.
- Q2. To draw component diagram for the given case study

## **7. Lab Assignment No: 7**

Objective: To Understand and Implement State Chart and Activity Modeling

- Q1. To draw a statechart diagram to graphically represent the given case study.
- Q2. To draw an activity diagram to graphically represent the workflow of the given case study.

## **8. Lab Assignment No: 8**

Objective: To Understand and Implement Modeling UML Class Diagrams and Sequence diagrams

- Q1. To draw class diagram for the given case study.
- Q2. To draw sequence diagram for the given case study.

## **9. Lab Assignment No: 9**

Objective: To Understand and Implement Modeling Data Flow Diagrams

- Q1. To draw data flow diagram (Level 0, 1 and 2) for the given case study.

## **10. Lab Assignment No: 10**

Objective: To Understand and Implement Estimation of Test Coverage Metrics and Structural Complexity

- Q1. To identify the basic blocks for a given program
- Q2. To draw a CFG using the basic blocks
- Q3. To determine McCabe's complexity from a CFG.

#### **11. Lab Assignment No: 11**

Objective: To Understand and Implement Designing Test Suites

- Q1. To design a test suite for the given case study.
- Q2. To verify implementation of functional requirements by writing test cases.
- Q3. To analyze results of testing to ascertain the current state of the project.

#### **12. Lab Assignment No: 12**

Objective: To Understand and Implement Forward and Reverse Engineering

- Q1. To obtain programs from UML diagrams.
- Q2. To obtain UML diagrams from programs.

#### **Books recommended:**

##### **TEXT BOOKS**

- 1. Software Engineering, Ian Sommerville, Pearson, 10th Edition, 2016.(T1)
- 2. Software Engineering: A Practitioner's Approach, Roger S. Pressman, McGraw Hills, 7th Edition, 2009.(T2)

##### **REFERENCE BOOKS**

- 1. Fundamentals of Software Engineering, Rajib Mall, Prentice-Hall of India, 3rd Edition, 2009.(R1)

#### **Course Evaluation:**

Day to day progressive evaluation, Lab Quizzes, Surprise Tests, Online Lab performance and Viva Voce

#### **Gaps in the syllabus (to meet Industry/Profession requirements):**

Implementing of real world problems

POs met through Gaps in the Syllabus: PO2, 5 & 6

#### **Topics beyond syllabus/Advanced topics/Design:**

**POs met through Topics beyond syllabus/Advanced topics/Design:** Teaching through research papers.

#### **Course Delivery Methods**

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Assignments/Seminars
CD3	Laboratory experiments/teaching aids

CD4	Industrial/guest lectures
CD5	Industrial visits/in-plant training
CD6	Self- learning such as use of NPTEL materials and internets
CD7	Simulation

### **Mapping between Objectives and Outcomes**

#### **Mapping of Course Outcomes onto Program Outcomes**

Course Outcome	Program Outcomes (POs)												Program Specific Outcomes (PSOs)		
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
CO1	3	3	3	1	3	2	2	1	1	1	1	3	1	3	3

**COURSE INFORMATION SHEET**

Course code: IT309  
Course title: **Image Processing lab**  
Pre-requisite(s): Discrete Mathematics,  
Co- requisite(s): Data Structures  
Credits: L: 3 T:0 P: 0  
Class schedule per week: 3  
Class: B. Tech  
Semester / Level:  
Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	Understand the basic concept of Digital Image Processing
2.	To Learn the Fourier Transform& its application
3.	Understand the basic components of filters
4.	Understand the basic concept of Image Compression Fundamentals
5.	Understand the basic concept of Image Segmentation.

### Course Outcomes

After the completion of this course, students will be:

1.	Understand the concept of image formation, digitization, and role human visual system plays in perception of image data and spatial filtering techniques for enhancing the appearance of an image.
2.	Acquire an appreciation for various frequency based filtering techniques for enhancing the appearance of an image, duly applying them in different applications.
3.	Discern the difference between noise models, gain an insight into assessing the degradation function and realize different spatial and frequency based filtering techniques for reduction and removal of noise.
4.	Synthesize a solution to image compression using the concept of information theory and lossless and lossy compression techniques.
5.	Design and create practical solutions using morphological and image segmentation operators for common image processing problems and assess the results.

### Syllabus

1. Write a C Program to display header information of 16 color .bmp image.
2. Program to enhance image using image arithmetic and logical operations.
3. Program for an image enhancement using pixel operation.
4. Program for gray level slicing with and without background.
5. Program for image enhancement using histogram equalization.
6. Program to filter an image using averaging low pass filter in spatial domain.
7. And median filter.
8. Program to sharpen an image using 2-D laplacian high pass filter in spatial domain.
9. domain.

10. Program for detecting edges in an image using Roberts cross gradient
11. operator and sobel operator.
12. Program for smooth an image using low pass filter in frequency domain .  
(Butterworth lpf)
13. Program for smooth an image using high pass filter in frequency domain .  
(Butterworth hpf)
14. Program for morphological image operations-erosion, dilation, opening & closing.
15. Program for illustrating color image processing.
16. Program for image Watermarking.

**Text books:**

2. Rafael. C. Gonzalez & Richard E. Woods- Digital Image Processing, 3/e Pearson Education, New Delhi - 2009

**Reference books:**

## COURSE INFORMATION SHEET

Course code: CS308

Course title: **Mobile Interface Lab**

Pre-requisite(s):

Co- requisite(s): NIL

Credits: L: 0 T: 0 P: 3

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	To introduce Android platform and its Architecture.
2.	To learn activity creation and Android UI designing.
3.	To be familiarized with Intent, Broadcast receivers and Internet services.
4.	To integrate multimedia, camera and Location based services in Android Application.
5.	To explore Mobile security issues.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Describe Android platform, Architecture and features.
2.	Design User Interface and develop activity for Android App.
3.	Design and implement Database Application and Content providers.
4.	Use multimedia, camera and Location based services in Android App.
5.	Discuss various security issues in Android platform.

### Syllabus

1. Develop an application that uses GUI components, Font and Colors.
2. Develop an application that uses Layout Managers and event listeners.
3. Write an application that draws basic graphical primitives on the screen.
4. Develop an application that makes use of database.
5. Develop a native calculator application.
6. Implement an application that implements Multi-threading.
7. Develop a native application that uses GPS location information.
8. Implement an application that writes data to the SD card.
9. Implement an application that creates an alert upon receiving a message.
10. Write a mobile application that creates alarm clock.

**Text books:**

1. Pattern Recognition and Machine Learning, Christopher Bishop, Springer 2006.

**Reference books:**

4. Introduction to Statistical Learning, Gareth James, Daniela Witten, Trevor Hastie, Robert Tibshirani, Springer, 2013.
5. Pattern Classification, 2nd Ed., Richard Duda, Peter Hart, David Stork, John Wiley & Sons, 2001.

# **(SEMESTER VII)**

## **COURSE INFORMATION SHEET**

Course code: IT404

Course title: **Intellectual Property Rights and Cyber Laws**

Pre-requisite(s):

Co- requisite(s):

Credits: L: 2 T:0 P: 0

Class schedule per week: 2

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### **Course Outcomes**

After the completion of this course, students will be:

1.	Understand the importance of Intellectual property, their implications and their types.
2.	Identify the process for registration and use of copyrights and patents and the rights involved with them.
3.	Discover the functioning of trademarks and domain names, the rights of the holders and process of dispute resolution.
4.	Assess the importance and procedure for registration of Designs and Geographical Indications, the rights of the owner and arbitration process.
5.	Develop an understanding of the Cyber Laws, trends in Cyber crimes and procedures to tackle them.

## **Syllabus**

### **Module I**

Introduction to Intellectual Property, Justifications for protection of IP, Major forms of IP- Copyright; Patent; Trade Marks; Designs; Geographic indication; Semi conductors; Plant varieties, Berne Convention, Paris Convention, TRIPS

### **Module II**

**Copyrights-** Historical development of copyright, Original literary, dramatic, musical, artistic works, Cinematograph films, Sound recordings, Ownership of copyright, Term of copyright, Infringement of copyright, Exceptions of infringement, Remedies, Registration

**Patents-** Historical development of patents, Criteria for obtaining patents, Non patentable inventions, Procedure for registration, Term of patent, Rights of patentee, Revocation, Infringement of patents, Remedies

### **Module III**

**Trade Marks and Domain Names** - Historical development of trademarks, Functions of marks, Concept of distinctiveness, Absolute grounds of refusal, Procedure for registration, Term of mark, Rights of holder, Assignment and licensing of marks, Infringement, Passing Off, Domain Name Protection, Domain Name Disputes, Cyber squatting, Arbitration

## Module IV

**Designs-** meaning and evolution of design protection, Registration, Term of protection, Rights of holder, unregistered designs.

**Geographical Indications-** meaning and its evolution, Difference between GI and Trade Marks, Registration, Rights, Authorised user

## Module V

**Cyber Law-** Need for Cyber Law, Cyber Jurisprudence at International and Indian Level, Cyber Crime and IT Act 2000, Nature of cyber criminality, Strategies to tackle cyber crime and Trends, Defamation, Harassment and Email abuse, Law of Digital Contracts, The System of Digital Signatures

### Text books:

1. Deborah E. Bouchoux, Intellectual Property: The Law of Trademarks, Copyrights, Patents, and Trade Secrets, Delmar Cengage Learning, 4th Edition, 2013.
2. Vivek Sood, Cyber Law Simplified, Tata McGraw-Hill Publishing, Fourth Reprint, 2008.

### Reference books:

1. Miller and Davis' Intellectual Property, Patents, Trademarks, and Copyright in a nutshell, West Publishing, 5<sup>th</sup> edition, 2012.
2. William Rodolph Cornish, David Llewelyn, Tanya Frances Aplin, Intellectual Property: Patents, Copyright, Trade Marks and Allied Rights, Sweet & Maxwell, 7<sup>th</sup> Edition, 2010.
3. Henri J. A. Charmasson, John Buchaca, Patents, Copyrights and Trademarks For Dummies, Wiley, 2nd Edition, 2008.

## COURSE INFORMATION SHEET

Course code: IT420

Course title: **Artificial Intelligence**

Pre-requisite(s): IT201 Basics of Intelligent Computing

Credits: L:3 T: 0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/ IT

### Program Outcome

This course enables the students to:

1.	An ability to apply knowledge of mathematics, science and engineering to both software and hardware design problems.
2.	An ability to design and conduct experiments and to analyze and interpret data related to software and hardware design solutions.
3.	An ability to design a system, component or process to meet desired needs within realistic constraints.
4.	An ability to function on multidisciplinary teams using current computer engineering tools and technologies.
5.	An ability to identify, formulate and solve engineering problems based on a fundamental understanding of concepts of computer engineering topics.

### Course Outcomes

After the completion of this course, students will be to:

1.	Analyze the principles and approaches of artificial intelligence and understand different aspects of Intelligent agent.
2.	Apply different search techniques for solving real world problems and select the most appropriate solution by comparative evaluation.
3.	Analyze the various concepts of knowledge representations and demonstrate working knowledge of reasoning in the presence of incomplete and/or uncertain information.
4.	Develop a basic understanding of some of the more advanced topics of AI such as learning, natural language processing, Robotics etc.
5.	Explain various types of LISP and PROLOG programs and explore more sophisticated LISP and PROLOG code.

**Introduction:** Overview of Artificial Intelligence- Problems of AI, AI Technique, Tic - Tac - Toe Problem.

**Intelligent Agents:** Agents & Environment, Nature Of Environment, Structure Of Agents, Goal Based Agents, Utility Based Agents, Learning Agents.

**Problem Solving:** Problems, Problem Space & Search: Defining The Problem As State Space Search, Production System, Problem Characteristics, Issues In The Design Of Search Programs. (9L)

## **Module II**

**Search Techniques:** Solving Problems By Searching, Problem Solving Agents, Searching For Solutions; Uniform Search Strategies: Breadth First Search, Depth First Search, Depth Limited Search, Bi-directional Search, Comparing Uniform Search Strategies.

**Heuristic Search Strategies:** Greedy Best-First Search, A\* Search, Memory Bounded Heuristic Search: Local Search Algorithms & Optimization Problems: Hill Climbing Search, Simulated Annealing Search, Local Beam Search, Genetic Algorithms; Constraint Satisfaction Problems, Local Search For Constraint Satisfaction Problems.

**Adversarial Search:** Games, Optimal Decisions & Strategies in Games, The Mini Max Search Procedure, Alpha-Beta Pruning, Additional Refinements, Iterative Deepening. (9L)

## **Module III**

**Knowledge & Reasoning:** Knowledge Representation Issues, Representation & Mapping, Approaches to Knowledge Representation, Issues in Knowledge Representation.

**Using Predicate Logic:** Representing Simple Fact in Logic, Representing Instant & ISA Relationship, Computable Functions & Predicates, Resolution, and Natural Deduction.

**Representing Knowledge Using Rules:** Procedural Verses Declarative Knowledge, Logic Programming, Forward Verses Backward Reasoning, Matching, Control Knowledge. (7L)

## **Module IV**

**Probabilistic Reasoning:** Representing Knowledge in an Uncertain Domain, Bayesian Networks, Dempster-Shafer Theory.

**Planning:** Overview, Components of A Planning System, Goal Stack Planning, Hierarchical Planning.

**Learning:** Forms Of Learning, Inductive Learning, Explanation Based Learning, Neural Net Learning & Genetic Learning. (8L)

## **Module V**

**Natural Language Processing:** Brief introduction to Syntactic Processing, Semantic Analysis, Discourse & Pragmatic Processing.

**Robotics:** Introduction, Robot hardware, robotic perception, planning to move, planning uncertain movements, robotic software architecture, application domains. (6L)

## **Text Books:**

### COURSE INFORMATION SHEET

Course code: IT421

Course title: **Artificial Intelligence Lab**

Pre-requisite(s): IT420 Artificial Intelligence, Data Structure And Database Management System

Credits: L:0 T: 0 P: 1.5

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

### Course Objectives

This course enables the students to:

1.	To familiarize the student in introducing AI Problems
2.	Develop mathematical thinking and problem-solving skill using AI
3.	To enable the student on how to approach for solving Engineering problems using simulation tools.

4.	To provide a foundation so as to use AI techniques in real world puzzle solving
----	---

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Apply AI techniques to different complex problems using programs.
CO2	Create knowledge base and serve their applications in different fields.
CO3	Implement perfect and better heuristics for different applications.
CO4	Analyze and Implement real world complex problems.
CO5	Create Expert systems

## SYLLABUS

### List of Programs as Assignments:

#### PUZZLE SOLVING:

##### **12. Lab Assignment No: 1**

Objective: To understand and solve simple AI problems.  
To solve Tic-Tac-Toe problem such that computer always win.  
(Min-Max Search)

##### **13. Lab Assignment No: 2**

Objective: To understand and solve simple AI problems.  
To solve Monkey-Banana Problem

##### **14. Lab Assignment No: 3**

Objective: To understand and solve simple AI problems.  
To solve Missionaries and Cannabal Problem.

##### **15. Lab Assignment No: 4**

Objective: To understand and solve simple AI problems.  
To solve Water-Jug problem.

#### SEARCHING PROBLEM: 8-PUZZLE OR 8-QUEEN

##### **16. Lab Assignment No: 5**

Objective: To Understand blind search algorithms.  
Q1. To implement Depth First Search (DFS)  
Q2. To implement Breadth First Search (BFS)

##### **17. Lab Assignment No: 6**

Objective: To apply DFS in problems.

To solve Hill Climbing

**18. Lab Assignment No: 7**

Objective: To apply BFS in problems.

To solve Best First Search

**19. Lab Assignment No: 8**

Objective: To understand and implement informed search algorithms.

To solve A\*.

**20. Lab Assignment No: 9**

Objective: To understand and implement informed search algorithms.

To solve AO\*.

**OTHER PROBLEMS:**

**21. Lab Assignment No: 10**

Objective: To implement real world Games.

Chess Playing (Computer vs Human)

**22. Lab Assignment No: 11**

Objective: To implement real-world Games.

Sudoku Puzzle

**Books recommended:**

## **COURSE INFORMATION SHEET**

Course code: IT423  
Course title: **Internet of Things(IoT)**  
Pre-requisite(s): IT201 Basics of Intelligent Computing  
Co-requisite(s):  
Credits: L:3 T:0 P:0  
Class schedule per week: 3  
Class: B. Tech  
Semester / Level: IV  
Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	Understand the basic concept and the Iot Paradigm
2.	Know the state of art architecture for IoT applications
3.	Learn the available protocols used for IoT
4.	Design basic IoT Applications.
5.	Evaluate optimal IoT applications.

### Course Outcomes

After the completion of this course, students will be:

1.	Identify the IoT Components and its capabilities
2.	Explain the architectural view of IoT under real world constraints
3.	Analyse the different Network and link layer protocols
4.	Evaluate and choose among the transport layer protocols
5.	Design an IoT application

### Syllabus

#### Module I

##### Introduction to IOT

The definition of the Internet of Things, main assumptions and perspectives. Platform for IoT devices Device architectures. Conventional and renewable power sources for resource-constrained devices. Operating systems for resource-constrained devices. (8L)

#### Module II

##### Architecture of IOT

Node structure: Sensing, Processing, Communication, Powering IOT networking: Topologies, Layer/Stack architecture, The data link layer for IoT- Wireless communication technologies. Wire communication technologies. Manet Networks. (8L)

#### Module III

##### Communication Technologies

Introduction to ZigBee, BLE, WiFi, LTE, IEEE 802.11ah, Discuss data rate, range, power, computations/bandwidth, QoS, Service oriented protocols (COAP). Communication protocols based on the exchange of messages (MQTT). Service discovery protocols. (8L)

#### Module IV

## M2M and IoT Technology Fundamentals

Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, Everything as a Service (XaaS), M2M and IoT Analytics, Knowledge Management. (8L)

### Module V

#### The data processing for IoT

Organization of data processing for the Internet of things. Cloud computing. Fog computing. Application case studies: Smart Grid. Home Automation. Smart City. (8L)

#### Text books:

Madiseti Vijay and BahgaArshdeep, Internet of Things (A Hands-on-Approach), 1<sup>st</sup> Edition, VPT, 2014.(T1)

## COURSE INFORMATION SHEET

Course code: IT424

Course title: **Internet of Things(IoT) Lab**

Pre-requisite(s): IT423 Internet of Things(IoT)

Co-requisite(s):

Credits: L:0 T:0 P:1.5

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	Understand the basic concept and the Iot Paradigm
2.	Know the state of art architecture for IoT applications
3.	Learn the available protocols used for IoT
4.	Design basic IoT Applications.
5.	Evaluate optimal IoT applications.

### Course Outcomes

After the completion of this course, students will be:

1.	Identify the IoT Components and its capabilities
2.	Explain the architectural view of IoT under real world constraints
3.	Analyse the different Network and link layer protocols
4.	Evaluate and choose among the transport layer protocols
5.	Design an IoT application

### List of Programs as Assignments:

#### 1. Lab Assignment No: 1

Glowing LEDs.

Toggling LED's.

#### 2. Lab Assignment No: 2

Transmitting a string through UART

Controlling LEDs blinking pattern through UART.

#### 3. Lab Assignment No: 3

Echo each character typed on HyperTerminal

Digital IO configuration.

Timer based LED Toggle.

#### 4. Lab Assignment No: 4

Scanning the available SSID's in the range of Wi-Fi Mote.

Connect to the SSID of choice

**5. Lab Assignment No: 5**

Demonstration of a peer to peer network topology.

check the connectivity to any device in the same network.

**6. Lab Assignment No: 6**

Send hello world to TCP server existing in the same network

Reading of atmospheric pressure value from pressure sensor.

**7. Lab Assignment No: 7**

I2C protocol study

Reading Temperature and Relative Humidity value from the sensor.

Reading Light intensity value from light sensor.

**8. Lab Assignment No: 8**

Proximity detection with IR LED.

Generation of alarm through Buzzer.

**9. Lab Assignment No: 9**

Timestamp with RTC

IO Expander.

Relay control.

**10. Lab Assignment No: 10**

I2C based 12-channel ADC

EEPROM read and write

**11. Lab Assignment No: 11**

Transmitting the measured physical value from the UbiSense Over the Air.

## COURSE INFORMATION SHEET

**Course code: CS494**

**Course title: Big Data Analytics**

**Pre-requisite(s): CS301 Database Management System**

**Co- requisite(s):**

**Credits: L: 3 T: 0 P: 0**

**Class schedule per week: 3**

**Class: B. Tech**

**Semester / Level: IV**

**Branch: CSE/IT**

### Course Objectives

**This course enables the students:**

1.	To provide an overview of approaches facilitating data analytics on huge datasets in different domain.
2.	To provide the knowledge on NoSQL and different partitioning method to handle large datasets.
3.	To provide an overview of Apache Hadoop and HDFS Concepts and Interfacing with HDFS
4.	To understand Map Reduce Jobs in Hadoop framework
5.	To provide the knowledge of various Hadoop based tool for processing large datasets.

### Course Outcomes

**After the completion of this course, students will be able to:**

1.	Describe big data and use cases from selected business domains
2.	Explain NoSQL big data management
3.	Install, configure, and run Hadoop and HDFS
4.	Perform map-reduce analytics using Hadoop
5.	Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data analytics

## **Syllabus**

### **Module I**

#### **Introduction**

What is big data, why big data, convergence of key trends, unstructured data, industry examples of big data, web analytics, big data and marketing, fraud and big data, risk and big data, credit risk management, big data and algorithmic trading, big data and healthcare, big data in medicine, advertising and big data, big data technologies, introduction to Hadoop, open source technologies, cloud and big data, mobile business intelligence, Crowd sourcing analytics, inter and trans firewall analytics. (8L)

### **Module II**

Introduction to NoSQL, aggregate data models, aggregates, key-value and document data models, relationships, graph databases, schemaless databases, materialized views, distribution models, sharding, master-slave replication, peer peer replication, sharding and replication, consistency, relaxing consistency, version stamps, map-reduce, partitioning and combining, composing map-reduce calculations. (8L)

### **Module III**

Data format, analyzing data with Hadoop, scaling out, Hadoop streaming, Hadoop pipes, design of Hadoop distributed file system (HDFS), HDFS concepts, Java interface, data flow, Hadoop I/O, data integrity, compression, serialization, Avro, file-based data structures. (8L)

### **Module IV**

MapReduce workflows, unit tests with MRUnit, test data and local tests, anatomy of MapReduce job run, classic Map-reduce, YARN, failures in classic Map-reduce and YARN, job scheduling, shuffle and sort, task execution, MapReduce types, input formats, output formats. (8L)

### **Module V**

Hbase, data model and implementations, Hbase clients, Hbase examples, praxis.Cassandra, Cassandra data model, Cassandra examples, Cassandra clients, Hadoop integration, Pig, Grunt, pig data model, Pig Latin, developing and testing Pig Latin scripts. Hive, data types and file formats, HiveQL data definition, HiveQL data manipulation, HiveQL queries. (8L)

### **Text Books:**

CO5	CD1,CD2,CD3,CD4,CD5,CD7

### COURSE INFORMATION SHEET

Course code: CS495

Course title: Big Data Analytics Lab

Pre-requisite(s): CS494 Big Data Analytics

Co- requisite(s):

**Credits: L:0 T: 0 P:1.5**  
**Class schedule per week: 3**  
**Class: B. Tech**  
**Semester / Level: IV**  
**Branch: CSE/IT**

### **Course Objectives**

This course enables the students to:

1.	To implement MapReduce programs for processing big data
2.	To realize storage of big data using H base, Mongo DB
3.	To analyze big data using linear models
4.	To analyze big data using machine learning techniques such as SVM Decision tree classification and clustering

### **Course Outcomes**

After the completion of this course, students will be able to:

CO1	Process big data using Hadoop framework
CO2	Build and apply linear and logistic regression models
CO3	Perform data analysis with machine learning methods
CO4	Perform graphical data analysis
CO5	Simulate basic Engineering problems

## **SYLLABUS**

### **List of Programs as Assignments:**

#### **Lab Assignment No: 1**

Objective:

Q1. To draw and explain Hadoop Architecture and Ecosystem with the help of a case study using WorkCount example. To define and install Hadoop.

#### **Lab Assignment No: 2**

Objective:

Q1. To implement the following file management tasks in Hadoop System (HDFS):  
Adding files and directories, Retrieving files, Deleting files

**Lab Assignment No: 3**

Objective:

Q1.To run a basic Word Count MapReduce program to understand MapReduce Paradigm: To count words in a given file, to view the output file, and to calculate execution time.

**Lab Assignment No: 4**

Objective:

Q1. Implement word count / frequency programs using MapReduce

**Lab Assignment No: 5**

Objective:

Q1.To study and implement basic functions and commands in R Programming.

**Lab Assignment No: 6**

Objective:

Q1. To implement Bloom Filters for filter on Stream Data in C++/java.

**Lab Assignment No: 7**

Objective:

Q1.To implement Bloom Filters for filter on Stream Data in C++/java.

**Lab Assignment No: 8**

Objective:

Q1.To implement clustering program using R programming.

**Lab Assignment No: 9**

Objective:

Q1. Visualize data using any plotting framework

**Lab Assignment No: 10**

Objective:

Q1.Implement an application that stores big data in Hbase / MongoDB / Pig using Hadoop / R.

**Books recommended:****TEXT BOOKS**

VigneshPrajapati, “Big Data Analytics with R and Hadoop”, Packet Publishing

**REFERENCE BOOKS**

1. Tom White, “Hadoop: The Definitive Guide”, Second Edition, O’Reilly Yahoo Press
2. Robert D. Schneider, “Hadoop for Dummies”, Wiley.

**Course Evaluation:**

Day to day progressive evaluation, Lab Quizzes, Surprise Tests, Online Lab performance and Viva Voce

**Gaps in the syllabus (to meet Industry/Profession requirements):**

Implementing of real world problems

POs met through Gaps in the Syllabus: PO5&6

**Topics beyond syllabus/Advanced topics/Design:**

**POs met through Topics beyond syllabus/Advanced topics/Design:** Teaching through research papers.

### Course Delivery Methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Assignments/Seminars
CD3	Laboratory experiments/teaching aids
CD4	Industrial/guest lectures
CD5	Industrial visits/in-plant training
CD6	Self- learning such as use of NPTEL materials and internets
CD7	Simulation

### Mapping between Objectives and Outcomes

#### Mapping of Course Outcomes onto Program Outcomes

Course Outcome	Program Outcomes (POs)												Program Specific Outcomes (PSOs)		
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

### COURSE INFORMATION SHEET

Course code: IT426

Course title: **Data Mining Concepts and Technique**

Pre-requisite(s): CS301 Database Management System

Co- requisite(s):

Credits: L:3    T:1    P:0

Class schedule per week: 4

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

#### Course Objectives

This course enables the students:

1.	Examine the types of the data to be mined and apply pre-processing methods on raw data.
2.	To introduce the basic concepts of Data Warehouse and Data Mining techniques
3.	Apply the techniques of clustering, classification, association finding, feature selection and visualization to real world data
4.	Prepare students for research in the area of data mining and related applications and Enhance students communication and problem solving skills
5.	Provide the students with practice on applying data mining solutions using common data mining software tool /programming languages.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Illustrate the fundamentals of data mining systems as well as issues related to access and retrieval of data at scale.
2.	Explain the various data mining functionalities and data warehousing techniques.
3.	Apply the various data mining techniques to solve classification, clustering and association rule mining problems.
4.	Analyze and choose among different approaches of a data mining task.
5.	Design and evaluate data mining models to be used in solving real life problems, keeping in view social impacts of data mining.

### Syllabus

#### Module I

Data Mining: Introduction, Relational Databases, Data Warehouses, Transactional databases, Advanced database Systems and Application, Data Mining Functionalities, Classification of Data Mining Systems, Major Issues in Data Mining.

Data Processing: Data Cleaning, Data Integration and Transformation, Data Reduction, Data Discretization and Concept Hierarchy Generation. (6L)

#### ModuleII

Data Warehouse: Introduction, A Multidimensional data Model, Data Warehouse Architecture, Data Warehouse Implementation, Data Cube Technology, From Data Warehousing to Data Mining.Data Cube Computation and Data Generalization. (8L)

#### Module III

Mining Association Rules in Large Databases: Association Rule Mining, Single – Dimensional Boolean Association Rules, Multilevel Association Rules from Transaction Databases, Multi Dimensional Association Rules from Relational Databases, From Association Mining to Correlation Analysis, Constraint – Based Association Mining. (10L)

#### Module IV

Classification and Prediction: Classification & Prediction, Issues Regarding Classification & Prediction, Classification by decision Tree Induction, Bayesian Classification, Classification by

Back propagation, Classification based on concepts & Association Rule Analysis, Other Classification Methods, Prediction, Classification Accuracy. (8L)

### **Module V**

Cluster Analysis: Introduction , Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Method - k- Medoids Algorithm, CLARANS, Hierarchical Methods - BIRCH, ROCK Density-Based Methods - DBSCAN, Grid-Based Methods – STING, WaveCluster. Outlier Analysis. (8L)

## COURSE INFORMATION SHEET

Course code: IT427

Course title: **Data Mining Concepts and Technique Lab**

Pre-requisite(s): IT426 Data Mining Concepts and technique

Co- requisite(s):

Credits: L:0 T:0 P:1.5

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### Course Objectives

This course enables the students to:

1.	Explain about the necessity of preprocessing and its procedure.
2.	Generate and evaluate Association patterns
3.	Solve problems using various Classifiers
4.	Learn the principles of Data mining techniques and various mining algorithms.
5.	Learn about traditional and modern data driven approach and problem solving techniques for various datasets

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Understand Data Warehousing and Data Mining and its applications and challenges and Create mini data warehouse.
CO2	Apply the association rules for mining applications
CO3	Identify appropriate Classification techniques for various problems with high dimensional data.
CO4	Implement appropriate Clustering techniques for various problems with high dimensional data sets.
CO5	Implement various mining techniques on complex data objects.

## **SYLLABUS**

### **List of Programs as Assignments:**

- Q1. Build a Data Warehouse and Explore WEKA tool.
- Q2. Demonstration of preprocessing on various datasets.
- Q3. Demonstration of Association rule process on dataset using apriori algorithm.
- Q4. Demonstrate performance of classification on various data sets.
- Q5. Demonstrate performance of clustering on various data sets.
- Q6. Demonstrate performance of Regression on various data sets
- Q7. Implement following algorithms for various datasets
  - A. Apriori Algorithm.
  - B. FP-Growth Algorithm.
  - C. K-means clustering.
- Q8. Implement Bayesian Classification for various datasets
- Q9. Implement Decision Tree for various datasets.
- Q10. Implement Support Vector Machines.
- Q11. Applications of classification for web mining.
- Q12. Case Study on Text Mining or any commercial application

### **Books recommended:**

#### **Text Books :**

- 1. Jiawei Han & Micheline Kamber - Data Mining Concepts & Techniques Publisher Harcourt India. Private Limited.

#### **Reference Books :**

- 1. G.K. Gupta – Introduction to Data Mining with case Studies, PHI, New Delhi – 2006.
- 2. A. Berson & S.J. Smith – Data Warehousing Data Mining, COLAP, TMH, New Delhi – 2004.
- 3. H.M. Dunham & S. Sridhar – Data Mining, Pearson Education, New Delhi, 2006.

### **Course Evaluation:**

Day to day progressive evaluation, Lab Quizzes, Surprise Tests, Online Lab performance and Viva Voce

**Gaps in the syllabus (to meet Industry/Profession requirements):**

Implementing of real world problems

POs met through Gaps in the Syllabus: PO5&amp;6

**Topics beyond syllabus/Advanced topics/Design:**

**POs met through Topics beyond syllabus/Advanced topics/Design:** Teaching through research papers.

**Course Delivery Methods**

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Assignments/Seminars
CD3	Laboratory experiments/teaching aids
CD4	Industrial/guest lectures
CD5	Industrial visits/in-plant training
CD6	Self- learning such as use of NPTEL materials and internets
CD7	Simulation

## **COURSE INFORMATION SHEET**

Course code: IT428

Course title: **Information Retrieval**

Pre-requisite(s): Design of Algorithms

Co- requisite(s): NIL

Credits: L: 3 T: 1 P: 0

Class schedule per week: 4

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### **Course Objectives**

This course enables the students to:

1.	To understand the basic component of data retrieval.
2.	To explore the application areas of information retrieval.
3.	To understand the idea of indexing and pre-processing of data.
4.	To explore the different IR evolution techniques.
5.	To understand the concepts of Query Expansion techniques.

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Explain the working of a search engine and details of the individual components.
2.	Apply efficient techniques for the indexing of documents
3.	Implement various indexing, scoring, ranking and relevance feedback models and techniques for information retrieval
4.	Develop a complete IR system from scratch
5.	Evaluate and analyse the performance of a retrieval systems using a suitable test collection

### **Syllabus**

#### **Module I**

#### **Introduction**

Introduction; Search Engine Architecture; An overview of crawling, text transformation, index

creation, user interaction, ranking, link analysis, evaluation and deep web. (8L)

## **Module II**

### **Pre-processing and Indexing**

Pre-processing: tokenization, stop word, normalization, stemming, wildcard queries, spelling correction – edit distance and k-gram; Indexing: Index construction; Index compression. (12L)

## **Module III**

### **Scoring**

Parametric and zone indexes; term frequency and weighting; vector space model; efficient scoring and ranking; vector space scoring. (8L)

## **Module IV**

### **IR Evaluation**

Evaluation; Standard test collection; Evaluation of unranked and ranked retrieval; Assessing relevance; System quality and user utility. (6L)

## **Module V**

### **Relevance Feedback and Query Expansion**

Relevance feedback and pseudo relevance feedback; query reformulation. (6L)

### **Text book:**

Manning, Christopher D., Raghavan Prabhakar, and SchützeHinrich, “Introduction to Information Retrieval”, Cambridge: Cambridge University Press, 2008.(T1)

## **COURSE INFORMATION SHEET**

Course code: IT438

Course title: **Information Retrieval Lab**

Pre-requisite(s): NIL

Co- requisite(s): Information Retrieval

Credits: L: 0 T: 0 P: 3

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### **Course Objectives**

This course enables the students to:

1.	To understand the basic component of data retrieval.
2.	To explore the application areas of information retrieval.
3.	To understand the idea of indexing and pre-processing of data.
4.	To explore the different IR evolution techniques.
5.	To be familiar with current R&D scenario in information retrieval.

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Explain the working of a search engine and details of the individual components.
2.	Apply efficient techniques for the indexing of documents
3.	Implement various indexing, scoring, ranking and relevance feedback models and techniques for information retrieval

4.	Develop a complete IR system from scratch
5.	Evaluate and analyse the performance of a retrieval systems using a suitable test collection

## Syllabus

### List of Assignments

1. Assignment on making a corpus and preprocessing: (a) search the web using a recent event and collect 50 news articles from various sources – this collection is ‘myCorpus’, (b) perform stop word removal and stemming of the documents.
2. Assignments on term-document matrix: Build term-document matrix using ‘myCorpus’ and top N frequent terms. Now find similarity between the documents using any distance metric.
3. Vary N and choose other distance matrices and perform experiments. Find two documents that have the highest similarity and two documents having the lowest similarity. Manually verify the documents and comment on the value of N and performance of the similarity metrics.
4. Experiments with TfIdf and applications of TfIdf using a given dataset.
5. Experiments with Zips law on Reuters21578 corpus and another Indian language corpus.
6. Assignments on construction of an Inverted Index using a given corpus.
7. Form 3 suitable queries manually and retrieve documents from ‘myCorpus’. Perform experiments on various retrieval models.
8. Implement and evaluate algorithms for index compression.
9. Experiments on studying an available crawler and building own toy crawler for performing specific task.
10. Experiments on Unranked Evaluation Measures: Manually label the set of documents corresponding to each query. Now compare the system-retrieved documents with manually labelled set of documents and compute Precision, Recall, F-measure.
11. Experiments on Ranked Retrieval and Evaluation: Select a task from Forum for Information Retrieval Evaluation(FIRE) resources, use the available dataset(<http://fire.irs.ri.res.in/fire/static/resources>) to design a IR system. Then evaluate your system using the given procedure.

### COURSE INFORMATION SHEET

Course code: CS429

Course title: **Information and Coding Theory**

Pre-requisite(s): MA303 Discrete Mathematics

Co- requisite(s): NIL

Credits: L: 3 T: 0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

## Course Objectives

This course enables the students:

1.	To understand the role of information theory for an efficient, error-free and secure delivery of information using binary data streams.
2.	To have a complete understanding of error-control coding.
3.	To understand encoding and decoding of digital data streams.
4.	To introduce methods for the generation of these codes and their decoding techniques.
5.	To have a detailed knowledge of compression and decompression techniques.
6	To evaluate the performance of various coding techniques over noisy communication channels

## Course Outcomes

After the completion of this course, students will be:

1.	To be able to understand the principles behind an efficient, correct and secure transmission of digital data stream.
2.	To be familiar with the basics of error-coding techniques.
3.	To have knowledge about the encoding and decoding of digital data streams.
4.	Generation of codes and knowledge about compression and decompression techniques.
5.	To be able to understand the performance requirements of various coding techniques.
6	To produce professionals who will be able to conduct research in information theory.

## Syllabus

### Module I

**Source Coding**-Introduction to Information Theory, Uncertainty and Information, Average Mutual Information and Entropy, Information Measure for Continuous Random Variables, Source coding theorem, Huffman Coding, Shannon- Fano -Elias Coding, Arithmetic Coding , The Lempel-Ziv ,Algorithm , Run Length Encoding.

And the PCX Format, Rate Distribution Function, Optimum Quantizer Design, Entropy Rate of a Stochastic Process, Introduction to Image Compression, The JPEG Standard for Lossless Compression, The JPEG Standard for Lossy Compression. (8L)

### Module II

**Channel Capacity and Coding**- Introduction, Channel Model, Channel Capacity, Channel Coding, Information Capacity Theorem, the Shannon Limit, Channel Capacity for MIMO System, Random Selection of Code. Error Control Coding (Channel Coding). (8L)

### Module III

**Linear Block Codes for Error Correction**- Introduction to Error Correction Codes, Basic Definitions, Matrix Description of Linear Block Codes , Equivalent Codes , Parity Check Matrix, Decoding of Linear Block Code ,Syndrome Decoding, Error Probability after Coding (Probability of Error Correction), Perfect Codes, Hamming Codes, Low Density Parity Check (LDPC) Codes , Optimal Linear Codes, Maximum Distance Separable (MDS) Codes, Bound on Minimum Distance, Space Time Block Codes.

(10L)

### Module IV

**Cyclic Codes-** Introduction to the Cyclic Codes, Polynomials, The Division Algorithm for Polynomials ,A Method for Generating Cyclic Codes, Matrix Description of Cyclic Codes, Burst Error Correction , Fire Codes, Golay Codes, Cyclic Redundancy Check(CRC) Codes, Circuit Implementation of Cyclic Codes. (6L)

#### Module V

**Bose –Chaudhuri Hocquenghem(BCH)Codes-** introduction to the Codes , Primitive Elements, Minimal Polynomials, Generator Polynomials , in Terms of Minimal Polynomials, Some Examples if BCH Codes, Reed –Solomon Codes, Implementation of Reed –Solomon Encoders and Decoders, Performance of RS Codes Over Real Channels, Nested Codes.

#### Module VI

**Convolution Codes-**Introduction to the Convolution Codes, Tree Codes and Trellis Codes, Polynomial Description of Convolution Codes(Analytical Representation ), Distance Notions for Convolution Codes, The Generating Function, Matrix Description of Convolution Codes, Viterbi Decoding and Convolution Codes , Distance Bounds for Convolution Codes , Turbo Codes.

**Trellis Coded ModulationN-** Introduction to TCM , The concept of Coded Modulation , Mapping by Set partitioning. (8L)

#### Text book:

### **Course Objectives:**

This course enables the students:

1.	To understand the role of information theory for an efficient, error-free and secure delivery of information using binary data streams.
2.	To have a complete understanding of error-control coding.
3.	To understand encoding and decoding of digital data streams.
4.	To introduce methods for the generation of these codes and their decoding techniques.
5.	To have a detailed knowledge of compression and decompression techniques.
6	To evaluate the performance of various coding techniques over noisy communication channels

### **Course Outcomes:**

After the completion of this course, students will be:

1.	To be able to understand the principles behind an efficient, correct and secure transmission of digital data stream.
2.	To be familiar with the basics of error-coding techniques.
3.	To have knowledge about the encoding and decoding of digital data streams.
4.	Generation of codes and knowledge about compression and decompression techniques.
5.	To be able to understand the performance requirements of various coding techniques.
6	To produce professionals who will be able to conduct research in information theory.

### **Syllabus:**

1. Write a program for determination of various entropies and mutual information of a given channel.

Test various types of channel such as

- Noise free channel.
- Error free channel
- Binary symmetric channel
- Noisy channel Compare channel capacity of above channels.

2. Write a program for generation and evaluation of variable length source coding using C/MATLAB (Any 2) a) Shannon – Fano coding and decoding b) Huffman Coding and decoding c) Lempel Ziv Coding and decoding

3. Write a Program for coding & decoding of linear block codes.

4. Write a Program for coding & decoding of cyclic codes.
5. Write a program for coding and decoding of convolutional codes.
6. Write a program for coding and decoding of BCH and RS codes.
7. Write a program to study performance of a coded and encoded communication system (Calculate the error probability).
8. Write a simulation program to implement source coding and channel coding for transmitting a text file.
9. Write a program to implement of any compression algorithm for either audio, image or video data

### **COURSE INFORMATION SHEET**

Course code: IT402

Course title: .NET Programming

Pre-requisite(s): Nil

Co- requisite(s):

Credits:L:0 T:0 P:1.5

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

#### **Course Objectives**

This course enables the students:

1.	To study basic and advanced features of the C# language
2.	To create form based and web based applications
3.	To study the internals of the .NET framework
4.	To know and study about the Common Language Runtime (CLR) and Common Language Infrastructure (CLI)

#### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Install and configure Dot Net application development tools.
2.	develop, implement and creating Applications with C#

3	develop, implement, and demonstrate Component Services, Threading, Remoting, Windows services, web
4.	explain Security in the .NET framework and Deployment in the .NET.
5.	develop Assemblies and Deployment in .NET, Mobile Application Development.

## **Syllabus**

### **Module I**

#### **C# basics**

C# and the .NET framework – C# basics – Objects and types – Inheritance –Arrays – Operators and casts – Indexers. (8L)

### **Module II**

#### **Advanced C# features**

Delegates and events – Strings and regular expressions – Generics – Collections–Memory management and pointers – Errors and exceptions. (8L)

### **Module III**

#### **I/O and network programming**

Tracing and events - threading and synchronization - .Net security – localization –Manipulating XML - Managing the file system – basic network programming. (8L)

### **Module IV**

#### **Window and web applications**

Window based applications – Data access with .NET – basics of ASP .NET -Introduction to web services. (8L)

### **Module V**

#### **.NET Features**

Architecture – Assemblies – shared assemblies – CLR hosting – Appdomains –Reflection. (8L)

**COURSE INFORMATION SHEET**

Course code: IT402

Course title: .NET ProgrammingLab

Pre-requisite(s): Nil

Co- requisite(s):

Credits:L:0    T:0    P:1.5

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

**Course Objectives**

This course enables the students:

1.	To study basic and advanced features of the C# language
2.	To create form based and web based applications
3.	To study the internals of the .NET framework

4.	To know and study about the Common Language Runtime (CLR) and Common Language Infrastructure (CLI)
----	--

### Course Outcomes

After the completion of this course, students will be able to:

1.	Create Simple application using web controls
2.	Work with States of ASP. NET Pages & Adrotator Control
3	Use of calendar control, Treeview control & Validation controls
4.	Query textbox and Displaying records & Display records by using database
5.	implement the algorithms in C#.net, VB.net and ASP.net

Syllabus:

List of experiments:

1. Simple application using web controls

- a) Finding factorial Value
- b) Money Conversion
- c) Quadratic Equation
- d) Temperature Conversion
- e) Login control

2. States of ASP.NET Pages

3. Adrotator Control

4. Calendar control

- a) Display messages in a calendar control
- b) Display vacation in a calendar control
- c) Selected day in a calendar control using style
- d) Difference between two calendar dates

5. Treeview control

- a) Treeview control and datalist
- b) Treeview operations

6. Validation controls

7. Query textbox and Displaying records

8. Display records by using database

## COURSE INFORMATION SHEET

Course code: IT436

Course title: **Software Testing**

Pre-requisite(s): IT305 Software Engineering

Co- requisite(s):

Credits: L: 3 T:1 P: 0

Class schedule per week: 4

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### Objectives

1.	To understand the fundamental concepts of software testing
2.	To understand about product risks and risk based testing
3.	To learn the details about test planning, test case writing and defect management
4.	To identify various types of system and testing methodologies
5.	To describe about test metrics, test reports and qualitative and quantitative analysis

### Outcomes

After the completion of this course, students will be able to:

1.	Comprehend the quality concepts that serve as the foundation for software testing
2.	Understand about the various risks related to product
3.	Conduct test planning, test case writing and defect management
4.	Enforce various techniques related to system and testing

5.	Elucidate about test metrics, test reports and qualitative and quantitative analysis
----	--

## Syllabus

### Module I

**Introduction to Software Quality** - Fundamentals of quality, financial aspect of quality, Total Quality Management, basic premises of quality management, quality approaches, quality and productivity relationship, variation in quality expectations, software quality management, processes related to software quality, quality management system structure. (8L)

### Module II

**Fundamentals of Software Testing** - Basic concepts of software testing, Comparison between TQM testing and Big Bang approaches, testing methodologies such as Black Box testing, White Box testing and Gray Box testing, test processes including test policy defining process, test strategy and test plan, overview of configuration management, SDLC work products, product risk management, potential risks of replacement of manual operation with automated systems, risk management processes, risk control mechanisms, software verification and validation during SDLC, V-Test model, defect management and life cycle. (8L)

### Module III

**Testing Techniques and Tools**- Levels of testing during SDLC, integration testing techniques, acceptance test plan and criteria, acceptance test process, acceptance testing methods such as alpha, beta and gamma testing, testing of specialised systems such as UI testing, compatibility testing, internationalisation testing, security testing, performance testing, recovery testing and installation testing, special testing such as OO testing, mobile testing, e-Commerce and e-Business testing, control testing, client testing, client server testing, web application testing and agile testing, testing tools and their procurement, advantages and disadvantages of tool usage in SDLC. (8L)

### Module IV

**Testing Process** - Test policy, test strategy, test planning, test scenario definition, test case definition, test data definition, test estimation techniques, variation in standards used at organisation level, national level, customer level and international level, roles and responsibilities of test team members, test metrics, test reports, quantitative and qualitative data collection and uses of qualitative and quantitative tools required for data analysis and decision making during and post testing. (8L)

### Module V

**Test Process Improvement** - Introduction to test process improvement, Alteration in perception about testing, issues related to testing process, importance of test process improvement, test process maturity, test process improvement model, stages of test process improvement model, graphical representation of improvements. (8L)

### Text book:

Course code: IT437

Course title: **Software Testing Lab**

Pre-requisite(s): IT324 Software Testing

Co- requisite(s):

Credits: L: 0 T:0 P: 1.5

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### Course Objectives

This course enables the students to:

1.	Familiarize the students with the fundamental concepts of Software Engineering
2.	Impart state-of-the-art knowledge on SRS and UML

3.	Explore case studies to demonstrate practical applications of different concepts
4.	Provide a platform where they can solve real life problems

### **Course Outcomes**

After the completion of this course, students will be able to:

CO1	Comprehend the quality concepts that serve as the foundation for software testing
CO2	Understand about the various risks related to product
CO3	Conduct test planning, test case writing and defect management
CO4	Enforce various techniques related to system and testing
CO5	Elucidate about test metrics, test reports and qualitative and quantitative analysis

## **SYLLABUS**

### **List of Programs as Assignments:**

#### **13. Lab Assignment No: 1**

Objective: To Understand and Implement Identification of Requirements from Problem Statements

- Q1. To consider the problem statement for a project to be developed and list out the ambiguities, inconsistencies and incompleteness of the problem statement.
- Q2. To identify different functionalities to be obtained from a system and characteristics that a system should have, but not possessed by the system itself

#### **14. Lab Assignment No: 2**

Objective: To Understand and Implement Estimation of Project Metrics

- Q1. To estimate the minimum size of the team one would require to develop a project through application of intermediate COCOMO.
- Q2. To use Halstead's metrics to estimate the effort required to recreate a program in JAVA from C.

#### **15. Lab Assignment No: 3**

Objective: To Understand and Implement Modeling UML Use Case Diagrams and Capturing Use Case Scenarios

- Q1. To draw a use case diagram for the given case study.
- Q2. To identify the primary and secondary actors for the system and generalization of use cases and «include» stereotypes to prevent redundancy in the coding phase.

#### **16. Lab Assignment No: 4**

Objective: To Understand and Implement E-R Modeling from the Problem Statements

- Q1. To identify the possible entity sets, their attributes, and relationships for the given case study.
- Q2. To draw an ER diagram for the given case study.

#### **17. Lab Assignment No: 5**

Objective: To Understand and Implement Identification of Domain Classes from the Problem Statements

- Q1. To identify potential classes and their attributes for the given case study.
- Q2. To utilize expert knowledge on the subject matter to identify other relevant classes.

#### **18. Lab Assignment No: 6**

Objective: To Understand and Implement Identification of Components from the Problem Statements

- Q1. To identify potential components for the given case study.
- Q2. To draw component diagram for the given case study

#### **19. Lab Assignment No: 7**

Objective: To Understand and Implement State Chart and Activity Modeling

- Q1. To draw a statechart diagram to graphically represent the given case study.
- Q2. To draw an activity diagram to graphically represent the workflow of the given case study.

#### **20. Lab Assignment No: 8**

Objective: To Understand and Implement Modeling UML Class Diagrams and Sequence diagrams

- Q1. To draw class diagram for the given case study.
- Q2. To draw sequence diagram for the given case study.

#### **21. Lab Assignment No: 9**

Objective: To Understand and Implement Modeling Data Flow Diagrams

- Q1. To draw data flow diagram (Level 0, 1 and 2) for the given case study.

#### **22. Lab Assignment No: 10**

Objective: To Understand and Implement Estimation of Test Coverage Metrics and Structural Complexity

- Q1. To identify the basic blocks for a given program
- Q2. To draw a CFG using the basic blocks
- Q3. To determine McCabe's complexity from a CFG.

#### **23. Lab Assignment No: 11**

Objective: To Understand and Implement Designing Test Suites

- Q1. To design a test suite for the given case study.
- Q2. To verify implementation of functional requirements by writing test cases.
- Q3. To analyze results of testing to ascertain the current state of the project.

#### **24. Lab Assignment No: 12**

Objective: To Understand and Implement Forward and Reverse Engineering

- Q1. To obtain programs from UML diagrams.
- Q2. To obtain UML diagrams from programs.

**Books recommended:**

**TEXT BOOKS**

3. Software Engineering, Ian Sommerville, Pearson, 10th Edition, 2016.(T1)
4. Software Engineering: A Practitioner's Approach, Roger S. Pressman, McGraw Hills, 7th Edition, 2009.(T2)

## REFERENCE BOOKS

## **COURSE INFORMATION SHEET**

Course code: CS301

Course title: **Database Management System (DBMS)**

Pre-requisite(s): Data Structures.

Co- requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### **Course Objectives**

This course enables the students to:

1.	Understand the fundamental concepts, historical perspectives, current trends, structures, operations and functions of different components of databases.
2.	Recognize the importance of database analysis and design in the implementation of any database application.
3.	Describe the role of transaction processing in a database system.
4.	Understand various concurrency control mechanisms for a database system.
5.	Describe the roles of recovery and security in a database system.

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Analyze data organization requirements and their inter relationships.
2.	Illustrate the features of data models and their application for storing data.
3.	Design queries to maintain and retrieve useful information from the databases created.
4.	Analyze the physical database design with respect to their expected performance using normalization and query processing.
5.	Examine the best practices according to concepts of indexing, transaction control and concurrency maintenance

### **Syllabus**

#### **Module I**

##### **Database Design and Entity - Relational Model**

Purpose of Database System; View of Data, Database Languages, Transaction Management, Database architecture, Database Users and Administrator, Types of database System, Overview of design process, E-R model, Constraints, E–R Diagram, E-R Diagram issues, Weak Entity Sets, Extended E – R Features, Reduction to E–R Schemas. (8L)

#### **Module II**

##### **Relational Model**

Structure of Relational Database, Codd's Rules, Fundamental Relational Algebra Operations, Additional Relational Algebra Operations, Extended Relational Algebra Operations, Data

definition, Basic structure of SQL queries, Set Operations, Aggregate Functions, Null Values, Nested Sub Queries, complex queries, views, modification of database, Joined relations, SQL data types & schemas, Integrity constraints, authorization, Embedded SQL, Triggers. (8L)

### **Module III**

#### **Relational Database Design**

Functional dependency, Decomposition, Normalization, First normal form, Second normal form, Third normal form, BCNF, Multivalued dependencies and Fourth normal form, Join dependencies and Fifth normal form, DKNF. (8L)

### **Module IV**

#### **Indexing & Hashing**

Ordered Indices, B+ Tree index files, B-Tree index files, Multiple key access Static hashing, Dynamic Hashing, Comparison of ordered indexing and hashing, Index definition in SQL.

#### **Query Processing**

Measure of Query Cost, Selection Operation, Evaluation of Expressions. (8L)

### **Module V**

#### **Transaction & Concurrency Control**

Transaction Concepts & ACID Properties, Transaction States, Implementation of Atomicity & Durability, Concurrent Executions, Serializability & Its Testing, Recoverability, Lock-Based protocols, Validation based protocol, Multiple Granularity, Multiversion Schemes, Deadlock Handling. (8L)

#### **Text Book:**

**COURSE INFORMATION SHEET**

Course code: CS302

Course title: **Database Management system Lab**

Pre-requisite(s): CS301 Database Management System

Co- requisite(s):

Credits: L:3    T:0    P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: V/III

Branch: CSE/IT

**Course Objective**

This course enables the students:

1.	Learn and practice data modeling using the entity-relationship and developing database designs.
2.	Understand the use of Structured Query Language (SQL) and learn SQL syntax.
3.	Understanding the basic principles of modeling of database using UML and apply normalization techniques to normalize the database system.
4.	Learn Multidimensional schemas suitable for data warehousing. And learn the Difference between OLTP (Online Transaction Processing) and OLAP (Online Analytical Processing).
5.	To demonstrate the principles behind the logical database design and Data Warehouse Modeling.

**Course Outcomes**

After the completion of this course, students will be able to:

CO1	Describe the fundamental elements of relational database management systems.
CO2	Explain the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.

CO3	Design ER-models to represent simple database application scenarios.
CO4	Convert the ER-model to relational tables, populate relational database and formulate SQL.
CO5	Improve the database design by normalization.

## **SYLLABUS**

### **List of Programs as Assignments:**

#### **Lab Assignment No: 1**

Objective: Implementation of DDL commands of SQL with suitable examples

- Create table
- Alter table
- Drop Table

#### **Lab Assignment No: 2**

Objective: Implementation of DML commands of SQL with suitable examples

- Insert
- Update
- Delete

#### **Lab Assignment No: 3**

Objective: Implementation of different types of function with suitable examples

- Number function
- Aggregate Function
- Character Function
- Conversion Function
- Date Function

#### **Lab Assignment No: 4**

Objective: Study & Implementation of PL/SQL.

#### **Lab Assignment No: 5**

Objective Implementation of different types of operators in SQL

- Arithmetic Operators
- Logical Operators
- Comparison Operator
- Special Operator
- Set Operation

#### **Lab Assignment No: 6**

Objective: Implementation of different types of Joins

- Inner Join
- Outer Join
- Natural Join etc..

#### **Lab Assignment No: 7**

Objective: Study & Implementation of SQL Triggers.

#### **Lab Assignment No: 8**

Objective:

- Creating Database /Table Space

- Managing Users: Create User, Delete User
- Managing roles:-Grant, Revoke.

#### **Lab Assignment No: 9**

Objective: Study and Implementation of

- Group By & having clause
- Order by clause
- Indexing

#### **Lab Assignment No: 10**

Objective: Study & Implementation of

- Sub queries
- Views

#### **Lab Assignment No: 11**

Objective: Study & Implementation of different types of constraints.

#### **Books recommended:**

Course title: **Software Engineering**

Pre-requisite(s):

Co- requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students to:

1.	Students are effective team members, aware of cultural diversity, who conduct themselves ethically and professionally
2.	Students use effective communication skills and technical skills to assure production of quality software, on time and within budget.
3.	Students build upon and adapt knowledge of science, mathematics, and engineering to take on more expansive tasks.
4.	Able to increase level of self-reliance, technical expertise, and leadership.

### Course Outcomes

After the completion of this course, students will be:

1.	Explain the software engineering principles and techniques
2.	Apply Software Project Management Practices
3.	Apply the knowledge gained for their project work as well as to develop software following software engineering standards
4.	Develop self-reliance, technical expertise, and leadership.

### Syllabus

#### Module I

##### Introduction

Some Definitions, FAQs about software engineering, the evolving role of software, Software process models, Waterfall model, the prototyping model, spiral model, RAD and Incremental model, Management activities, Project planning and Project Scheduling. (8L)

#### Module II

##### Software Requirements

Functional and non-functional requirements, User requirements, System requirements, the software requirements document. IEEE standard of SRS, Quality of good SRS.

**Requirement Engineering Process:** Feasibility study, Requirements elicitation and analysis, Requirements validation, Requirement management. (8L)

### **Module III**

#### **Design Engineering**

Design Process and Design Quality, Design Concepts, Design Models, Object oriented Design, UML: Class diagram, Sequence diagram, Collaboration diagram. (8L)

### **Module IV**

#### **Verification and Validation**

Verification and Validation Planning, S/W inspection, static analysis.

#### **Software Testing**

Testing functions, Test case design, White Box testing, Black box testing, Unit testing, Integration Testing, System testing, Reliability. (8L)

### **Module V**

Process metrics, Software Measurement, Software Project Estimation, Decomposition Techniques, Empirical Estimation Models, Quality assurance and standards, Quality planning, Quality control, S/W Maintenance in detail. (8L)

#### **Text Book:**

Sommerville, Software Engineering, 7<sup>th</sup> Edition, Pearson Education Publication. (T1)

### **COURSE INFORMATION SHEET**

Course code: CS325

Course title: **Database Modeling**

Pre-requisite(s): CS301 Database Management System

Co- requisite(s):

Credits: L:3 T:0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### **Course Objective**

This course enables the students:

1.	Learn and practice data modeling using the entity-relationship and developing database designs.
2.	Understand the use of Structured Query Language (SQL) and learn SQL syntax.
3.	Understanding the basic principles of modeling of database using UML and apply normalization techniques to normalize the database system.
4.	Learn Multidimensional schemas suitable for data warehousing. And learn the Difference between OLTP (Online Transaction Processing) and OLAP (Online Analytical Processing).
5.	To demonstrate the principles behind the logical database design and Data Warehouse Modeling.

### **Course Outcomes**

After the completion of this course, students will be to:

1.	Explain the features of database management systems and Relational database and design the ER-models to represent simple database application scenarios.
2.	Apply the SQL-the standard language to relational tables, populate relational database and formulate SQL queries on data.
3.	Applying UML, it collects the requirements and prepare their scenarios and design. And understand the functional dependencies and design of the database.
4.	Design a data mart or data warehouse for any organization. And Develop a skill to write queries using DMQL.
5.	Analyze the existing design of a database and data warehouse and apply concepts of normalization to design an optimal database.

## **Syllabus**

### **Module I**

#### **Database Design and Entity- Relational Model**

Introduction to Data and Database Management, The Database Life Cycle, Conceptual Data Modeling, Fundamental ER Constructs, Mapping Cardinalities and Constraints, Relational Data model (Relational Algebra, Tuple and Domain Relational Calculus), Network Model, Hierarchical Model, Alternative Conceptual Data Modeling Notations, Advanced ER Construct, Summary.

(8L)

### **Module II**

#### **Requirement Analysis and Conceptual Data Modeling**

Introduction, Requirements Analysis, Conceptual Data Modeling, View Integration, Entity Clustering for ER Models, Transforming Rules and SQL Constructs, Transformation Steps, Summary.

(8L)

### **Module III**

#### **The Unified Modeling Language (UML) and Normalization**

Class Diagrams, Activity Diagrams, Rules of Thumb for UML Usage, Functional Dependencies, Fundamentals of Normalization, Design of Normalized Tables, Normalization of Candidate Tables Derived from ER Diagrams, 1NF, 2NF, 3NF, BCNF, Fourth and Fifth Normal Forms. Determining the Minimum set of 3NF Tables, Summary.

(8L)

### **Module IV**

#### **Business Intelligence**

Overview of Data Warehousing, Logical Design, The Exponential Explosion of views, Decision Support system. Overview of Online Analytical Processing (OLAP), View Size Estimation, Selection of Materialized Views, View Maintenance, Query Optimization, Forecasting, Overview of Data mining and Text Mining, Summary.

(8L)

### **Module V**

#### **Logical Database Design**

Requirements Specification, Logical Design, CASE Tools for Logical Database Design, generating a Database from a Design, Database Support, Collaborative Support, Distributed Development, Application Life Cycle tooling Integration, Design Compliance Checking, Reporting, Modeling a Data Warehouse, Semi-Structured Data, XML, Summary.

(8L)

### COURSE INFORMATION SHEET

Course code: IT330

Course title: **Cryptography and Network Security**

Pre-requisite(s):

Co- requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

1.	To Learn Basic Concepts of Cryptography and Network Security and Apply them in various Real life Application.
2.	To understand the basic concepts of Network Security
3.	To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
4.	To understand how to deploy encryption techniques to secure data in transit across data networks
5.	To design security applications in the field of Information technology

### Course Outcomes

After the completion of this course, students will be:

1.	Understand the basic concept of Cryptography and Network Security and their mathematical models, and to be familiar with different types of threats
2.	Learning and applying various Ciphering Techniques.
3.	Apply Symmetric and Asymmetric Cryptographic Algorithms and Standards in Networks.
4.	Examine the issues and structure of Authentication Service and Electronic Mail Security
5.	To explain and classify different malicious programs, worms and viruses, and to learn the working and design principles of Firewalls

### Syllabus

#### Module I

**Introduction to Cryptography:** Computer Security concepts, The OSI Security Architecture, Security Attacks, Security Services, A model for Network Security, Classical Encryption Techniques. (8L)

#### Module II

**Mathematical Foundations of Cryptography:** Modular Arithmetic, Euclidean Algorithm, Groups, Rings, Fields, Finite Fields of the Form  $GF(p)$ , Polynomial Arithmetic, Finite Fields of the Form  $GF(2^n)$ , Prime Numbers, Fermat's and Euler's Theorem, The Chinese Remainder Theorem, Quadratic Congruence, Discrete Logarithms. (8L)

#### Module III

**Symmetric and Asymmetric Cryptography:** Difference Between Symmetric and Asymmetric Cryptography, DES, Triple DES, AES, RSA Cryptosystem, Symmetric and Asymmetric Key Cryptography Together, Elgamal Cryptosystem, Elliptic Curve Cryptosystems, , Diffie-Hellman Key Exchange , Cryptographic Hash Functions, Message Authentication Codes, Digital Signature. (8L)

#### Module IV

**Internet Security Protocols :** Basic Concepts, Security Socket Layer (SSL), Secure Hyper Text Transfer Protocol (SHTTP), Time stamping Protocol(TSP), Secure Electronic Transaction(SET), SSL Versus SET, 3-D Secure Protocol, Electronic Money, Email Security, Wireless Application Protocol(WAP) Security, Security in GSM. (8L)

#### Module V

**Network Security:** Users, Trusts and Trusted Systems, Buffer Overflow and Malicious Software, Malicious Programs, Worms, Viruses, Intrusion Detection Systems (IDS), Firewalls: Definitions, Constructions and Working Principles. (8L)

**COURSE INFORMATION SHEET**

Course title: **Genetic Algorithm**

Pre-requisite(s): CS206 Design and Analysis of Algorithm

Co-requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: III

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	Able to understand the basic concepts of GA
2.	Able to find the application areas of GA
3.	Able to understand the importance of optimization using GA
4.	Able to know about the traditional GA model

### Course Outcomes

After the completion of this course, students will be able to:

1.	Define Traditional GA model.
2.	Build code for GA.
3.	Apply different techniques of GA.
4.	Design schema for various problems of optimization using GA.
5.	Develop Classifier system using GA.

### Syllabus

#### Module I

Introduction to Genetic Algorithm, Genetic Algorithms, Traditional and Search Methods and their Differences, A Simple Genetic Algorithm. The Fundamental Theorem, Schema Processing.

(8L)

#### Module II

Two & k-Armed Bandit Problem, Hypothesis, Schemata and Revisited., Computer Implementation of A Genetic Algorithm: Data Structures, Reproduction, Crossover and Mutation, A Time to Reproduce, A Time to Cross, How Well Does It Work, Mapping Objective Functions to Fitness Form, Fitness Scaling.

(8L)

#### Module IV

Coding, A Multiparameter Mapped, Fixed-Point Coding, Discretization, Constraints.Applications of Genetic Algorithms :The Rise of Genetic Algorithms, Genetic Algorithm Applications of Historical Interest, De Jong and Function Optimization.

(8L)

#### Module V

Improvements in Basic Technique, Current Applications of Genetic Algorithms.Genetics-Based Machine Learning, Whence It Came, What is Classifier System, Rule and Message, Genetic Algorithm.

(8L)

### COURSE INFORMATION SHEET

Course code: IT340

Course title: **Machine Learning**

Pre-requisite(s): CS206 Design and Analysis of Algorithm

Co- requisite(s):NIL

Credits: L: 3 T: 1 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	To understand the basic concept of machine learning.
2.	To explore the application of machine learning.
3.	To understand the concept of supervised learning.
4.	To learn the advantage of neural network.
5.	To learn the utility of clustering techniques.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Formulate machine learning problems corresponding to different applications: data, model selection, model complexity
2.	Demonstrate understanding of a range of machine learning algorithms along with their strengths and weaknesses
3.	Implement machine learning solutions to classification, regression, and clustering problems
4.	Design and implement various machine learning algorithms in a range of real-world applications
5.	Evaluate and analyse the performance of machine learning algorithm or a system based on machine learning algorithm.

### Syllabus

#### Module I

##### Introduction to Machine learning

Machine Learning – what and why? Basics of Linear Algebra and Statistics, Overview of target function representations; Linear Regression. (8L)

#### Module II

##### Supervised Learning

Basics of Feature Selection and Evaluation, Decision Tree, Overfitting and Pruning, Logistic regression, Support Vector Machine and Kernel; Noise, bias-variance trade-off, under-fitting and over-fitting concepts. (10L)

#### Module III

##### Neural Networks

Perceptions: representational limitation and gradient descent training. Multilayer networks and back propagation. Hidden layers and constructing intermediate, distributed representations. Overfitting, learning network structure, recurrent networks. (8L)

#### Module IV

##### Unsupervised and Semi Supervised Learning

Learning from unclassified data. Clustering. Hierarchical Agglomerative Clustering. k-

means partitional clustering. Expectation maximization (EM) for soft clustering. Semi-supervised learning with EM using labelled and unlabeled data.

(8L)

## Module V Ensemble

Committees of multiple hypotheses, bagging, boosting, active learning with ensembles, (6L)

### Text book:

### **COURSE INFORMATION SHEET**

Course code: IT490

Course title: **Natural Language Processing**

Pre-requisite(s): CS305 Compiler Design

Co- requisite(s): NIL

Credits: L: 3 T: 0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

#### **Course Objectives**

This course enables the students:

1.	To understand the basic component of Natural Language Processing.
2.	To explore the application areas of Natural Language Processing.
3.	To understand the idea of Language Modelling.
4.	To explore the basic concepts of Parts-of-speech Tagging.
5.	To understand the concepts of language modelling.

#### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Describe the typical NLP problem, their importance & difficulty; and concepts of morphology, syntax, semantics, discourse & pragmatics of natural language.
2.	Demonstrate understanding of the relationship between NLP and statistics & machine learning.
3.	Discover various linguistic and statistical features relevant to the basic NLP task, namely, spelling correction, morphological analysis, parts-of-speech tagging, parsing and semantic analysis.
4.	Analyse NLP problems to decompose them into appropriate components.
5.	Evaluate a NLP system, identify shortcomings and suggest solutions for these shortcomings.

#### **Syllabus**

##### **Module I**

**Introduction to NLP** :introduction and applications, NLP phases, Difficulty of NLP including ambiguity; Spelling error and Noisy Channel Model; Concepts of Parts-of-speech and Formal Grammar of English. (8L)

## Module II

**Language Modelling:** N-gram and Neural Language Models Language Modelling with N-gram, Simple N-gram models, Smoothing(basic techniques), Evaluating language models; Neural Network basics, Training; Neural Language Model, Case study: application of neural language model in NLP system development. (8L)

## Module III

**Parts-of-speech Tagging: basic concepts; Tagset; Early approaches: Rule based and TBL; POS tagging using HMM, POS Tagging using Maximum Entropy Model.** (8L)

## Module IV

**Parsing** Basic concepts: top down and bottom up parsing, Treebank; Syntactic parsing: CKY parsing; Statistical parsing basics: Probabilistic Context Free Grammar (PCFG); Probabilistic CKY Parsing of PCFGs. (8L)

## Module V

**Semantics:** Vector Semantics; Words and Vector; Measuring Similarity; Semantics with dense vectors; SVD and Latent Semantic Analysis; Embeddings from prediction: Skip-gram and CBOW; Concept of Word Sense; Introduction to WordNet. (8L)

## **COURSE INFORMATION SHEET**

Course code: IT423

Course title: **Internet of Things (IoT)**

Pre-requisite(s): IT201 Basics of Intelligent Computing

Co-requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### **Course Objectives**

This course enables the students:

1.	Understand the basic concept and the Iot Paradigm
2.	Know the state of art architecture for IoT applications
3.	Learn the available protocols used for IoT
4.	Design basic IoT Applications.
5.	Evaluate optimal IoT applications.

### **Course Outcomes**

After the completion of this course, students will be:

1.	Identify the IoT Components and its capabilities
2.	Explain the architectural view of IoT under real world constraints
3.	Analyse the different Network and link layer protocols
4.	Evaluate and choose among the transport layer protocols
5.	Design an IoT application

### **Syllabus**

#### **Module I**

##### **Introduction to IOT**

The definition of the Internet of Things, main assumptions and perspectives. Platform for IoT devices Device architectures. Conventional and renewable power sources for resource-constrained devices. Operating systems for resource-constrained devices. (8L)

#### **Module II**

## **Architecture of IOT**

Node structure: Sensing, Processing, Communication, Powering IOT networking: Topologies, Layer/Stack architecture, The data link layer for IoT- Wireless communication technologies. Wire communication technologies. Manet Networks.

(8L)

## **Module III**

### **Communication Technologies**

Introduction to ZigBee, BLE, WiFi, LTE, IEEE 802.11ah, Discuss data rate, range, power, computations/bandwidth, QoS, Service oriented protocols (COAP). Communication protocols based on the exchange of messages (MQTT). Service discovery protocols. (8L)

## **Module IV**

### **M2M and IoT Technology Fundamentals**

Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, Everything as a Service (XaaS), M2M and IoT Analytics, Knowledge Management. (8L)

## **Module V**

### **The data processing for IoT**

Organization of data processing for the Internet of things. Cloud computing. Fog computing. Application case studies: Smart Grid. Home Automation. Smart City. (8L)

### **Text books:**

1. Madiseti Vijay and BahgaArshdeep, Internet of Things (A Hands-on-Approach), 1<sup>st</sup> Edition, VPT, 2014.(T1)

### **COURSE INFORMATION SHEET**

Course code: IT420

Course title: **Artificial Intelligence**

Pre-requisite(s): IT201 Basics of Intelligent Computing

Credits: L:3 T: 0 P: 0

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/ IT

#### **Program Outcome**

This course enables the students to:

1.	An ability to apply knowledge of mathematics, science and engineering to both software and hardware design problems.
2.	An ability to design and conduct experiments and to analyze and interpret data related to software and hardware design solutions.
3.	An ability to design a system, component or process to meet desired needs within realistic constraints.
4.	An ability to function on multidisciplinary teams using current computer engineering tools and technologies.
5.	An ability to identify, formulate and solve engineering problems based on a fundamental understanding of concepts of computer engineering topics.

## Course Outcomes

After the completion of this course, students will be to:

1.	Analyze the principles and approaches of artificial intelligence and understand different aspects of Intelligent agent.
2.	Apply different search techniques for solving real world problems and select the most appropriate solution by comparative evaluation.
3.	Analyze the various concepts of knowledge representations and demonstrate working knowledge of reasoning in the presence of incomplete and/or uncertain information.
4.	Develop a basic understanding of some of the more advanced topics of AI such as learning, natural language processing, Robotics etc.
5.	Explain various types of LISP and PROLOG programs and explore more sophisticated LISP and PROLOG code.

## Syllabus

### Module I

**Introduction:** Overview of Artificial Intelligence- Problems of AI, AI Technique, Tic - Tac - Toe Problem.

**Intelligent Agents:** Agents & Environment, Nature Of Environment, Structure Of Agents, Goal Based Agents, Utility Based Agents, Learning Agents.

**Problem Solving:** Problems, Problem Space & Search: Defining The Problem As State Space Search, Production System, Problem Characteristics, Issues In The Design Of Search Programs. (9L)

### Module II

**Search Techniques:** Solving Problems By Searching, Problem Solving Agents, Searching For Solutions; Uniform Search Strategies: Breadth First Search, Depth First Search, Depth Limited Search, Bi-directional Search, Comparing Uniform Search Strategies.

**Heuristic Search Strategies:** Greedy Best-First Search, A\* Search, Memory Bounded Heuristic Search: Local Search Algorithms & Optimization Problems: Hill Climbing Search, Simulated Annealing Search, Local Beam Search, Genetic Algorithms; Constraint Satisfaction Problems, Local Search For Constraint Satisfaction Problems.

**Adversarial Search:** Games, Optimal Decisions & Strategies in Games, The Mini Max Search Procedure, Alpha-Beta Pruning, Additional Refinements, Iterative Deepening. (9L)

### Module III

**Knowledge & Reasoning:** Knowledge Representation Issues, Representation & Mapping, Approaches to Knowledge Representation, Issues in Knowledge Representation.

**Using Predicate Logic:** Representing Simple Fact in Logic, Representing Instant & ISA Relationship, Computable Functions & Predicates, Resolution, and Natural Deduction.

**Representing Knowledge Using Rules:** Procedural Verses Declarative Knowledge, Logic Programming, Forward Verses Backward Reasoning, Matching, Control Knowledge. (7L)

### Module IV

**Probabilistic Reasoning:** Representing Knowledge in an Uncertain Domain, Bayesian Networks, Dempster-Shafer Theory.

**Planning:** Overview, Components of A Planning System, Goal Stack Planning, Hierarchical Planning.

**Learning:** Forms Of Learning, Inductive Learning, Explanation Based Learning, Neural Net Learning & Genetic Learning. (8L)

## Module V

**Natural Language Processing:** Brief introduction to Syntactic Processing, Semantic Analysis, Discourse & Pragmatic Processing.

**Robotics:** Introduction, Robot hardware, robotic perception, planning to move, planning uncertain movements, robotic software architecture, application domains. (6L)

## COURSE INFORMATION SHEET

Course code: IT426

Course title: **Data Mining Concepts and Technique**

Pre-requisite(s): CS301 Database Management System

Co- requisite(s):

Credits: L:3 T:1 P:0

Class schedule per week: 4

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### Course Objectives

This course enables the students:

1.	Examine the types of the data to be mined and apply pre-processing methods on raw data.
2.	To introduce the basic concepts of Data Warehouse and Data Mining techniques
3.	Apply the techniques of clustering, classification, association finding, feature selection and visualization to real world data
4.	Prepare students for research in the area of data mining and related applications and Enhance students communication and problem solving skills
5.	Provide the students with practice on applying data mining solutions using common data mining software tool /programming languages.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Illustrate the fundamentals of data mining systems as well as issues related to access and retrieval of data at scale.
2.	Explain the various data mining functionalities and data warehousing techniques.
3.	Apply the various data mining techniques to solve classification, clustering and association rule mining problems.
4.	Analyze and choose among different approaches of a data mining task.
5.	Design and evaluate data mining models to be used in solving real life problems, keeping in view social impacts of data mining.

### Syllabus Module I

Data Mining: Introduction, Relational Databases, Data Warehouses, Transactional databases, Advanced database Systems and Application, Data Mining Functionalities, Classification of Data Mining Systems, Major Issues in Data Mining.

Data Processing: Data Cleaning, Data Integration and Transformation, Data Reduction, Data Discretization and Concept Hierarchy Generation. (6L)

### **Module II**

Data Warehouse: Introduction, A Multidimensional data Model, Data Warehouse Architecture, Data Warehouse Implementation, Data Cube Technology, From Data Warehousing to Data Mining. Data Cube Computation and Data Generalization. (8L)

### **Module III**

Mining Association Rules in Large Databases: Association Rule Mining, Single – Dimensional Boolean Association Rules, Multilevel Association Rules from Transaction Databases, Multi Dimensional Association Rules from Relational Databases, From Association Mining to Correlation Analysis, Constraint – Based Association Mining. (10L)

### **Module IV**

Classification and Prediction: Classification & Prediction, Issues Regarding Classification & Prediction, Classification by decision Tree Induction, Bayesian Classification, Classification by Back propagation, Classification based on concepts & Association Rule Analysis, Other Classification Methods, Prediction, Classification Accuracy. (8L)

### **Module V**

Cluster Analysis: Introduction , Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Method - k- Medoids Algorithm, CLARANS, Hierarchical Methods - BIRCH, ROCK Density-Based Methods - DBSCAN, Grid-Based Methods – STING, WaveCluster. Outlier Analysis. (8L)

## COURSE INFORMATION SHEET

Course code: IT427

Course title: **Data Mining Concepts and Technique Lab**

Pre-requisite(s): IT426 Data Mining Concepts and technique

Co- requisite(s):

Credits: L:0 T:0 P:1.5

Class schedule per week: 3

Class: B. Tech

Semester / Level: IV

Branch: CSE/IT

### Course Objectives

This course enables the students to:

1.	Explain about the necessity of preprocessing and its procedure.
2.	Generate and evaluate Association patterns
3.	Solve problems using various Classifiers
4.	Learn the principles of Data mining techniques and various mining algorithms.

5.	Learn about traditional and modern data driven approach and problem solving techniques for various datasets
----	---

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Understand Data Warehousing and Data Mining and its applications and challenges and Create mini data warehouse.
CO2	Apply the association rules for mining applications
CO3	Identify appropriate Classification techniques for various problems with high dimensional data.
CO4	Implement appropriate Clustering techniques for various problems with high dimensional data sets.
CO5	Implement various mining techniques on complex data objects.

## SYLLABUS

### List of Programs as Assignments:

- Q1. Build a Data Warehouse and Explore WEKA tool.
- Q2. Demonstration of preprocessing on various datasets.
- Q3. Demonstration of Association rule process on dataset using apriori algorithm.
- Q4. Demonstrate performance of classification on various data sets.
- Q5. Demonstrate performance of clustering on various data sets.
- Q6. Demonstrate performance of Regression on various data sets
- Q7. Implement following algorithms for various datasets
  - D. Apriori Algorithm.
  - E. FP-Growth Algorithm.
  - F. K-means clustering.
- Q8. Implement Bayesian Classification for various datasets
- Q9. Implement Decision Tree for various datasets.
- Q10. Implement Support Vector Machines.

Q11 Applications of classification for web mining.

Q12. Case Study on Text Mining or any commercial application

### **Books recommended:**

#### **Text Books :**

2. Jiawei Han & Micheline Kamber - Data Mining Concepts & Techniques Publisher Harcourt India. Private Limited.

#### **Reference Books :**

4. G.K. Gupta – Introduction to Data Mining with case Studies, PHI, New Delhi – 2006.

**DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING  
SPECIALIZATIONS**

**SPECIALIZATION I: COMPUTATIONAL INTELLIGENCE**

**Course code: CS360**

**Course title: Nature Inspired Computing**

**Pre-requisite(s):**

**Co- requisite(s):**

**Credits: L:3 T:1 P: 0**

**Class schedule per week: 4**

**Class: B. Tech**

**Semester / Level: IV**

**Branch: CSE/IT**

**Course Objectives**

This course enables the students to:

1	Develop basic knowledge of Nature Inspired Computing Techniques and their working principle.
2	Identify the suitable Nature Inspired Computing Techniques to solve a problem.
3	Generate the possible ways of solution to a certain real world problem using Nature Inspired Computing Techniques
4	Analyze and modify the performance of the Nature Inspired Computing algorithms.

**Course Outcomes:**

After completion of this course the students will be able to:

1.	Identify the Nature Inspired Computing Techniques and their classifications.
2.	Explain the different Nature Inspired algorithms and other algorithms and their working principles.
3.	Design and modify different Nature Inspired algorithms in terms of Initialization, Processing and Stopping Criteria.
4.	Apply Nature Inspired algorithms to different set of practical problems.
5.	Justify the proper applicability of a Nature Inspired algorithm to a problem.

## **Syllabus:**

### **Module I: Introduction to Nature Inspired Computing, Meta-Heuristic and Evolutionary Algorithms**

Nature inspired Computing Concepts, Concepts of Optimization, Examples of the Formulation of Various Engineering Optimization Problems, Searching the Decision Space for Optimal Solutions, Definition of Terms of Meta-Heuristic and Evolutionary Algorithms, Principles of Meta-Heuristic and Evolutionary Algorithms, Classification of Meta-Heuristic and Evolutionary Algorithms.

(8L)

### **Module II: Evolutionary Algorithms**

Evolutionary Algorithms in Discrete or Continuous Domains, Generating Random Values of the Decision Variables, Dealing with Constraints, Fitness Function, Selection of Solutions in Each Iteration, Generating New Solutions, The Best Solution in Each Algorithmic Iteration, Termination Criteria, General Algorithm, Performance Evaluation of Meta-Heuristic and Evolutionary Algorithms, Search Strategies

### **Module III: Genetic Algorithm**

Introduction, Mapping the Genetic Algorithm (GA) to Natural Evolution, Creating an Initial Population, Selection of Parents to Create a New Generation, Population Diversity and Selective Pressure, Reproduction, Termination Criteria, User-Defined Parameters of the GA, Pseudocode of the GA

(8L)

### **Module IV: Ant Colony Optimization & Particle Swarm Optimization**

Ant Colony Optimization:

ACO Introduction, Mapping Ant Colony Optimization (ACO) to Ants' Foraging Behavior, Creating an Initial Population, Allocating Pheromone to the Decision Space, Generation of New Solutions, Termination Criteria, User-Defined Parameters of the ACO, Pseudocode of the ACO

Particle Swarm Optimization:

PSO Introduction, Mapping Particle Swarm Optimization (PSO) to the Social Behavior of Some Animals, Creating an Initial Population of Particles, The Individual and Global Best Positions, Velocities of Particles, Updating the Positions of Particles, Termination Criteria, User-Defined Parameters of the PSO, Pseudocode of the PSO

(8L)

### **Module V: Other Nature Inspired Algorithms**

Honey-Bee Mating Optimization:

Introduction of HBMO, Mapping Honey-Bee Mating Optimization (HBMO) to the Honey-Bee Colony Structure, Creating an Initial Population, Pseudocode of the HBMO

Bat Algorithm:

BA Introduction, Mapping the Bat Algorithm (BA) to the Behavior of Microbats, Creating an Initial Population, Pseudocode of the BA

Harmony Search:

Inspiration of the Harmony Search (HS), Initializing the Harmony Memory, Generating New, Harmonies (Solutions), Pseudocode of the HS

**Textbook:**

1. Meta-heuristic and Evolutionary Algorithms for Engineering Optimization by Omid Bozorg-Haddad, Mohammad Solgi, Hugo A. Loáiciga, Wiley, 2017, ISBN: 9781119386995

### COURSE INFORMATION SHEET

Course code: CS473

Course title: Deep Learning

Pre-requisite(s):

Co- requisite(s):

**Credits: L:3 T:1 P: 0**  
**Class schedule per week: 4**  
**Class: B. Tech**  
**Semester / Level: IV**  
**Branch: CSE/IT**

### **Course Objectives**

This course enables the students:

1.	To understand the basic component of Machine Learning.
2.	To explore the application areas of Neural Networks.
3.	To understand the idea of Recurrent Neural Networks.
4.	To explore the basic concepts of Feed forward Neural Networks.
5.	To understand the concepts of mathematical modelling.

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Distinguish between machine learning and deep learning
2.	Identify problems suitable for application of deep learning.
3.	Explain the working of FF Neural Networks and their modifications.
4.	Apply Convolutional & Recurrent Neural Networks to solve problems
5.	Discuss the efficiency of deep learning systems.

### **Syllabus**

#### **Module I**

**Machine Learning Basics:** Learning Algorithms, Capacity, Over Fitting and Under fitting, Hyperparameters and Validation sets, Estimators, Bias and variance, Maximum Likelihood Estimation, Bayesian Statistics, Supervised and Unsupervised Learning algorithms, SGD, Building a ML algorithm,

(8L)

#### **Module II**

History of Deep Learning, Deep Learning Success Stories, McCulloch Pitts Neuron, Thresholding Logic, Perceptrons, Perceptron Learning Algorithm Deep feedforward Networks, Multilayer Perceptrons (MLPs), Representation Power of MLPs, Sigmoid Neurons, Gradient Descent, Representation Power of Feedforward Neural Networks, Backpropagation.

(8L)

#### **Module III**

Gradient Descent (GD), Momentum Based GD, Nesterov Accelerated GD, Stochastic GD, AdaGrad, RMSProp, Adam, Eigenvalues and eigenvectors, Eigenvalue Decomposition, Basis, Principal Component Analysis and its interpretations, Singular Value Decomposition. Autoencoders and relation to PCA, Regularization in autoencoders, Denoising autoencoders, Sparse autoencoders, Contractive autoencoders.

(8L)

#### **Module IV**

Regularization: Bias Variance Tradeoff, L2 regularization, Early stopping, Dataset Augmentation, Parameter sharing and tying, Injecting noise at input, Ensemble methods, Dropout. Greedy Layerwise Pre-training, Better activation functions, Better weight initialization methods, Batch Normalization. Learning Vectorial Representations Of Words.

(8L)

### Module V

Convolutional Neural Networks, LeNet, AlexNet, ZF-Net, VGGNet, GoogLeNet, ResNet, Visualizing Convolutional Neural Networks, Guided Backpropagation, Deep Dream, Deep Art, Fooling Convolutional Neural Networks, Recurrent Neural Networks, Backpropagation through time (BPTT), Vanishing and Exploding Gradients, Truncated BPTT, GRU, LSTMs. Encoder Decoder Models, Attention Mechanism, Attention over images, Introduction to GANs.

(8L)

## COURSE INFORMATION SHEET

**Course code: IT401**

**Course title: Data Analysis and Interpretation**

**Pre-requisite(s): Nil**

**Co- requisite(s):**

**Credits: L:3 T:1 P: 0**

**Class schedule per week: 4**

**Class: B. Tech**

**Semester / Level: 4**

**Branch: CSE/IT**

### Course Objectives

This course enables the students:

1.	Examine the different types of the data and its interpretation and analysis.
2.	To introduce the basic Statistics Probability Distributions.
3.	Apply the techniques of hypothesis tests, supervised and unsupervised learning, feature selection and visualization to real world data.
4.	Prepare students for latest research in the area of data analysis such as deep learning and related applications and Enhance student's communication and problem solving skills.
5.	Provide the students to practice on different datasets for data analysis and interpretation using common statistical software tool /programming languages.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Analyze data to convert information to useful knowledge.
2.	Develop an appreciation for what is involved in learning from data.
3.	Explain a wide variety of learning algorithms and also understand how to apply a variety of learning algorithms to data.
4.	Elaborate the fundamental principles, theory and approaches for Neural Networks and learning with deep neural networks.
5.	Interpret and Solve problems related to statistical analysis in Machine Learning

### Syllabus:

#### Module I

**Descriptive Statistics-** Introduction to the course Descriptive Statistics Probability Distributions

**Inferential Statistics-**Inferential Statistics through hypothesis tests Permutation &Randomization Test.  
(6L)

#### Module II

**Machine Learning:** Introduction and Concepts Differentiating algorithmic and model based frameworks **Regression:** Regression & ANOVA Regression ANOVA (Analysis of Variance) Ordinary Least Squares, Ridge Regression, Lasso Regression, K Nearest Neighbours Regression & Classification. (10L)

### Module III

**Supervised Learning with Regression and Classification techniques** - Bias-Variance Dichotomy, Model Validation Approaches, Logistic Regression, Linear Discriminant Analysis, Quadratic Discriminant Analysis, Regression and Classification Trees, Support Vector Machines (10L)

### Module IV

**Ensemble Methods-** Random Forest, Neural Networks, Deep learning. (8L)

### Module V

**Unsupervised Learning and Challenges for Big Data Analytics-** K-Means and Hierarchical Clustering, Associative Rule Mining, Challenges for big data analytics

**Prescriptive analytics-** Creating data for analytics through designed experiments, Creating data for analytics through Active learning, Creating data for analytics through Reinforcement learning. (6L)

### **COURSE INFORMATION SHEET**

**Course code: CS361**

**Course title: Nature Inspired Computing Lab**

**Pre-requisite(s):**

**Co- requisite(s): CS360 Nature Inspired Computing**

**Credits: L: 0 T: 0 P:2**

**Class schedule per week: 4**

**Class: B. Tech**

**Semester / Level: 4**

**Branch: CSE/IT**

#### **Course Objectives:**

This course enables the students to:

1.	Make use of Data sets in implementing nature inspired algorithms
2.	Select the appropriate nature inspired design method for a specified application.
3.	Implement nature inspired concepts and algorithms for a complex problem.
4.	Analyze and compare the different nature inspired algorithms

#### **Course Outcomes:**

After the completion of this course, students will be able to:

1.	Utilize the knowledge gained about basic concepts of nature inspired algorithms.
2.	Identify nature inspired techniques suitable for a given problem

3.	Solve the problems using various nature inspired techniques
4.	Apply nature inspired techniques to solve complex problems
5	Design application using nature inspired algorithms.

### **Syllabus:**

1. Programs on Python Basics
2. Programs based on Concept of Optimization
3. Programs based on Concept of Meta heuristics
4. Programs showing Implementation of GA
5. Programs using Problem solving approach of GA
6. Programs showing Implementation of ACO algorithm
7. Programs using Problem solving approach of ACO algorithm
8. Programs showing Implementation of PSO algorithm
9. Programs using Problem solving approach of PSO algorithm
10. Programs showing Implementation of Honey-bee algorithm
11. Programs using Problem solving approach of Honey-bee algorithm
12. Programs showing Implementation of Bat algorithm
13. Programs using Problem solving approach of-Bat algorithm
14. Programs showing Implementation of Harmony Search
15. Programs using Problem solving approach of Harmony Search

### **Textbook:**

1. Meta-heuristic and Evolutionary Algorithms for Engineering Optimization by Omid Bozorg-Haddad, Mohammad Solgi, Hugo A. Loáiciga, Wiley, 2017, ISBN: 9781119386995

### **Ref Book:**

## Branch: B Tech/IT

### Course Objectives

This course enables the students:

1.	To understand the basic component of Machine Learning.
2.	To explore the application areas of Neural Networks.
3.	To understand the idea of Recurrent Neural Networks.
4.	To explore the basic concepts of Feed forward Neural Networks.
5.	To understand the concepts of mathematical modelling.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Develop Neural network models to solve classification problems.
2.	Design decision trees to solve real world problems.
3.	Create Bayesian Networks for classification problems
4.	Design Convolutional & Recurrent Neural Networks to solve problems
5.	Interpret the training and testing results of deep learning systems.

### Syllabus

1. Programs showing Implementation and demonstration of the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
2. Write a Program for a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
4. Write a program to build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriate data sets.
5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
6. Write a program assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for a data set.
7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set.
8. Write a program to Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same dataset for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering.
9. Write a program showing implementation of k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.

10. Write a program showing implementation of the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.

### **Course Evaluation:**

## SPECIALIZATION II: IoT AND CLOUD COMPUTING

### COURSE INFORMATION SHEET

**Course code: IT 360**

**Course title: Introduction to cyber physical systems**

**Pre-requisite(s): Internet of things**

**Co- requisite(s):**

**Credits: L:3 T:1 P:0**

**Class schedule per week: 4**

**Class: B.Tech**

**Semester / Level: IV**

**Branch: B Tech/IT**

#### Course Objectives

This course enables students:

1.	To understand different Cyber physical systems, its characteristics and components.
2.	To have a comprehensive view of storage and networking infrastructure for highly CPS deployments.
3.	To critically appraise the opportunities and challenges of IoT applications in complex business environments.
4.	To understand the concepts of Ubiquitous Computing
5.	To know about embedded systems as a whole.

#### Course Outcomes

After the completion of this course, students will be able to:

1.	Explain the logical and physical components of a System
2.	Evaluate Embedded computing systems.
3.	Analyze the various types of CPS technologies.
4.	Apply IoT concepts to different technological applications
5.	Discuss case studies related to ubiquitous computing systems.

#### Syllabus

##### Module 1: Introduction to Systems

Study of Systems, Standard Forms of System Description, Input-Output Description, State-Variable Description, Controllability, Observability, and Identifiability, Analytical Solutions of Linear Systems Models, Solution of State Equations Using the Laplace Transform, Eigenvalues of the Linear Vector-Equation Systems, Steady-State Errors of Systems .

(8L)

## **Module II: Introduction to Embedded Computing Systems**

Embedded Computing Systems, Hardware Architectures of Embedded Computing Systems, Programmable Logic Devices, Field-Programmable Gate Arrays, Design Metrics, Embedded Control Systems, Control: Feedback Control, Feedback Components of Embedded Control Systems, Hardware-Software Codesign, Case Study: FPGA-Based CPU Core.

(8L)

## **Module III: Introduction to Cyber-Physical Systems**

Cyber-Physical Systems, Cyber-Physical Systems Design Recommendations, Cyber-Physical System Requirements, Requirements Engineering, Interoperability, Real-Time Systems, GPU Computing, Cyber-Physical Systems Applications, Requirements Analysis.

(8L)

## **Module IV: Introduction to the Internet of Things**

Internet of Things, Radio Frequency Identification Technology, Wireless Sensor Networks Technology, Sensor Technology, Sensor Networks, Wireless Sensor Networks, Powerline Communication: Internet of Things and Powerline Communication, Smart Grid, Smart Home Energy Management, RFID Applications.

(8L)

## **Module V: Ubiquitous Computing**

Ubiquitous Computing Fundamentals, Learning in the Ubiquitous Space: Smart Home and Powerline Communication, Core Properties of Ubiquitous Computing, Ubiquitous Computing Formalisms for Use Cases, Smart Devices: Components and Services, Tagging, Sensing, and Controlling : Tagging, Sensing Controlling, Autonomous Systems in Ubiquitous Computing .

(8L)

### **TextBooks:**

1. Guide to Computing Fundamentals in Cyber-Physical Systems, Concepts, Design Methods, and Applications, Authors: Möller, Dietmar P.F

### **Reference Books:**

### **COURSE INFORMATION SHEET**

**Course code:IT460**

**Course title: Cloud Storage and Security**

**Pre-requisite(s): Cloud Computing**

**Co- requisite(s):**

**Credits: L:3 T:1 P:0**

**Class schedule per week: 4**

**Class: B.Tech**

**Semester / Level: IV**

**Branch: B Tech/IT**

### **Course Objectives**

This course enables students:

1.	To understand different cloud storage technologies, its characteristics and components.
2.	To have a comprehensive view of storage and networking infrastructure for highly virtualized cloud deployments.
3.	To critically appraise the opportunities and challenges of storage management in complex business environments.
4.	To acknowledge the concepts of security systems and cryptographic protocols, which are widely used in the design of cloud security.
5.	To appraise legal and compliance issues related to cloud computing

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Explain the logical and physical components of a Storage infrastructure.
2.	Evaluate storage architectures, including DAS, SAN, NAS, and CAS.
3.	Elaborate the various types of Storage networking technologies.
4.	Discuss the different forms of storage virtualization techniques.
5.	Evaluate security issues related to cloud storage.

## Syllabus

### Module 1: Introduction to Storage Technology:

Review of basic sources of data, understand the value of data to business, challenges in data storage and its management, Evolution of storage technology and architecture, Data center infrastructure, Storage system environment, Intelligent storage systems.

(8L)

### Module 2: Storage System Architecture:

Components of a storage system environment: Host, Connectivity and storage, Data Protection: RAID, Implementation of RAID, RAID Array Components, Components of an intelligent storage system, Intelligent storage array.

(8L)

**Module 3: Storage Networking Technologies:** Evolution of networked storage, Direct-Attached Storage (DAS) Architecture, Types of DAS, Benefits and Limitations, Storage Area Network (SAN), Components of SAN, Fibre channel connectivity, Zoning, Networked Attached Storage (NAS), Components of NAS.

(8L)

**Module 4: Advanced Storage Networking and Virtualization:** IP Storage Area Network (IP SAN), iSCSI, Fiber channel over IP (FCIP), Content-Addressed Storage (CAS), Storage virtualization, Types of Storage virtualization

(8L)

### Module 5: Cloud Security:

Storage security framework, Security implementations in SAN, NAS and IP SAN, Virtualization system security, Technologies for virtualization-based security enhancement, legal and compliance issues.

(8L)

### Text Book:

1. G. Somasundaram, AlokShrivastava , “Information Storage and Management: Storing, Managing, and Protecting Digital Information”, Wiley.

## COURSE INFORMATION SHEET

**Course code:IT462**

**Course title: SOFTWARE DEFINED NETWORKING**

**Pre-requisite(s): Data and Computer Communication**

**Co- requisite(s): NIL**

**Credits: L: 3 T: 1 P: 0**

**Class schedule per week: 04**

**Class: M. Tech**

**Semester / Level: IV**  
**Branch: CSE/IT**

### Course Objectives

This course enables the students to:

1.	Review the main features of SDN
2.	Discuss the timeline of SDN techniques in the past
3.	Gain awareness about the ideas and principles behind SDN
4.	Recognize architectural themes in computer networking where SDN originated
5.	Apply understanding of security and virtualization in SDN.

### Course Outcomes

After the completion of this course, students will be able to:

1.	Identify challenges for widely deploying SDN in different contexts
2.	Discuss SDN controller scalability issues and possible solutions
3.	Analyze SDN Basics and Open Flow.
4.	Compare Abstraction methods used in SDN and their applicability
5.	Distinguish between scalability and virtualization in SDN

## Syllabus

### Module I [8L]

#### Introduction:

Software defined networking, SDN motivation, Conventional networking system today (before SDN), Ideal networking system for innovation, SDN now: separate forwarding hardware from controlling software

### Module II [8L]

#### SDN evolution

Main features of SDN, Evolution of the SDN supporting technologies: centralized global view, Network Control Point, Evolution of SDN technologies: Programmability in Networks, Active networks SDN basics and OpenFlow, Control plane and data plane, Forwarding abstraction, State Distribution Abstraction, other Abstraction methods, Network Operating System(NOS), Openflow.

### Module III [8L]

#### OpenFlow Controllers

SDN controllers, SDN controllers (NOS) .vs. OS, NOS functionality, Existing SDN controllers, NOX, Open Daylight, REST API.

### Module IV [8L]

SDN challenges, SDN Network Updates

SDN challenges, Device heterogeneity, SDN scalability: distributed controller, distributed apps, NOS: Network abstraction, SDN controller scalability issue, Solutions.

### Module V [8L]

#### SDN virtualization:

Flowvisor Overview, Network slice and flowspace, Slicing control & data planes, Network Slicing Architecture, Slicing Policies, FlowVisor Slicing, FlowVisor Message Handling.

#### SDN and Security

Problems of Legacy Network Devices, Security as an App, Framework for Enabling Security Controls in OpenFlow networks.

### COURSE INFORMATION SHEET

**Course code: IT361**

**Course title: Programming for IoT Lab**

**Pre-requisite(s):**

**Co- requisite(s):**

**Credits: L:0 T:0 P:2**

**Class schedule per week: 4**

**Class: B. Tech**

**Semester / Level: III**

**Branch: CSE/IT**

#### Course Objectives

This course enables the students:

1.	Understand the basic concept and the Iot Paradigm
2.	Know the state of art architecture for IoT applications
3.	Learn the available protocols used for IoT
4.	Design basic IoT Applications.
5.	Evaluate optimal IoT applications.

### Course Outcomes

After the completion of this course, students will be able to :

1.	Identify the IoT Components and its capabilities
2.	Design IoT System using Raspberry-Pi for reading data from various sensors and storing the data into cloud.
3.	Design the Network for communication between two devices using Zigbee.
4.	Develop socket programs for device communication
5.	Design and develop small IoT systems like simulated traffic signals, lift elevator etc.

### Syllabus

1. Programs/ Script based on Raspberry-Pi, Arduino and other micro controllers.
2. Programs/ Script based on different operating systems for Raspberry-Pi. Understanding the process of OS installation on Raspberry-Pi
3. Programs/ Script based on Connectivity and configuration of Raspberry-Pi circuit with basic peripherals, LEDS for understanding GPIO and its use in programs.
4. Programs/ Script showing the connectivity of Raspberry-Pi circuit with temperature sensor. Write a program/script to read the environment temperature. If temperature crosses a threshold value, the application indicated user using LEDS
5. Programs/ Script showing the connectivity of Raspberry-Pi circuit with IR sensor. Write an application to detect obstacle and notify user using LEDs.
6. Programs/ Script showing connectivity of Raspberry-Pi /Beagle board with a Zigbee module. Write a network application for communication between two devices using Zigbee.
7. Write a Program/script using Raspberry-Pi to control the operation of hardware simulated traffic signal.
- 8 Write a Program/script using Raspberry-Pi to control the operation of a hardware simulated lift elevator.
9. Write a Program/script showing server application to be deployed on Raspberry-Pi. Write client applications to get services from the server application.
10. Write a Program/script which will create a small dashboard application to be deployed on cloud. Different publisher devices can publish their information and interested application can subscribe.

11. Write a Program/script which will create a simple web interface for Raspberry-Pi/Beagle board to control the connected LEDs remotely through the interface.

**Credits: L:0 T:0 P:2**

**Class schedule per week: 4**

**Class: B. Tech**

**Semester / Level: IV**

**Branch: CSE/IT**

#### **Course Objectives**

1.	To learn the design and development process involved in creating a cloud based application
2.	Install and use a generic cloud environment that can be used as a private cloud.
3.	Learn how to simulate a cloud environment to implement new schedulers.
4.	To learn to implement and use parallel programming using Hadoop
5.	Learning about developing web applications in cloud

#### **Course Outcomes**

CO1	To develop web applications in cloud
CO2	Design and deploy a web application in a PaaS environment.
CO3	Construct various virtualization tools such as Virtual Box, VMware workstation.
CO4	Analyze large data sets in a parallel environment.

## Syllabus

1. Sign up for a free account at two or more cloud storage providers of your choice. Choose any ten of your files that are larger than 1 MB each. Store these files in both the providers above. Show a "directory listing" in each.
2. Install Virtualbox/VMware Workstation with different flavours of linux or windows OS on top of windows7 or 8.
3. Install a C compiler in the virtual machine created using virtual box and execute Simple Programs
4. Install Google App Engine. Create hello world app and other simple web applications using python/java.
5. Use GAE launcher to launch the web applications.
6. Simulate a cloud scenario using CloudSim and run a scheduling algorithm that is not present in CloudSim.
7. Find a procedure to transfer the files from one virtual machine to another virtual machine.
8. Find a procedure to launch virtual machine using trystack (Online Openstack Demo Version)
9. Install Hadoop single node cluster and run simple applications like wordcount.

### **Course Objectives**

This course enables the students to:

1.	To Apply Principles Rasterization
2.	To be able to use visual computations for geometrical drawings.
3.	To apply principles of Projection techniques
4.	To be able to use animation techniques
5.	To Construct Virtual images using color and shading techniques

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Apply different rasterization concepts.
2.	Explain various projection techniques.
3.	Develop Object Representation using Curves and Surfaces
4.	Design Computer Animation
5.	Create Visual Effects

### **Syllabus**

#### **Module I**

##### **Graphics Pipeline**

**[10 Lectures]**

Graphics system introduction, Rasterization, Scan Conversions, Filled Area Algorithms, Antialiasing

#### **Module II**

**[ 10 Lectures]**

##### **2D Geometric Transformations and Viewing**

Basic Transformations, Homogenous coordinates, Composite Transformations, Affine Transformations, 2D Viewing, Coordinate transformation, 2D Clipping, 2D texture mapping

#### **Module III**

##### **3D Geometric Transformations, Modeling and Viewing**

**[10 Lectures]**

3D basic Transformations, 3D Viewing and Clipping, Projections, 3D display elements, Implicit Modeling

#### **Module IV**

##### **Curves, Surface Design and Display**

**[10 Lectures]**

Curves, Curve Properties, Quadratic Curves, Cubic Curve, Splines, Surface Design, Fractals geometry, Hidden Surface Removal

#### **Module V**

##### **Colorimetry and Computer Animation**

**[10 Lectures]**

Color Models, Illumination and shading model, Tone Reproduction, Principles of Animation, Keyframing, Deformations, Character Animations, Physics based Animations, Morphing and Motion Specifications

### COURSE INFORMATION SHEET

Course code: IT480

Course title: Image Processing and Pattern Recognition

**Pre-requisite(s): Design and Analysis of Computer Algorithm**

**Co- requisite(s):**

**Credits: L:3 T:1 P:0**

**Class schedule per week: 4**

**Class: B.Tech**

**Semester / Level: IV**

**Branch: B Tech/CSE/IT**

### **Course Objectives**

This course enables the students:

1.	To understand the basic concepts for representation of an image mathematically.
2.	Use foundational techniques of image processing to solve image processing problems of real world application
3.	To understand the basic concepts of classification, clustering and its importance to image processing and pattern recognition.
4.	Use image processing and pattern recognition techniques to detect objects and activities in images.

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Explain the process of digital representation of images and the principles of image enhancement and restoration.
2.	Discuss different techniques employed for the segmentation of images.
3.	Apply different feature extraction techniques for building pattern recognition applications.
4.	Explain the different pattern recognition strategies.
5.	Distinguish between different types of pattern classification techniques and Explain its applications to different real time problems.

### **Syllabus**

#### **Module I Overview of Image Processing**

**[10 Lectures]**

Fundamental Components of Image Processing, Digital Image Representation, Mathematical Preliminaries, Mathematical Morphology, Image Enhancement: Grayscale Transformation, Piecewise Linear Transformation, Bit Plane Slicing, Histogram Equalization, Histogram Specification, Enhancement by Arithmetic Operations, Smoothing Filter, Sharpening Filter, Image Blur Types and Quality Measures. Image Restoration: Image degradation model, Types of image degradation, Linear and non-linear image restoration techniques.

#### **Module II Image Segmentation**

**[10 Lectures]**

Introduction, Classification of image segmentation algorithms, Principle of image thresholding, Region based segmentation, Clustering based Image segmentation, Contour based image segmentation.

### **Module III Image Feature Extraction and Representation[10 Lectures]**

Necessity of image feature extraction, Types of image feature extraction methods, Feature representation: Chain code representation, Polygonal Approximation, Measuring moments, Principal components, Boundary thinning

### **Module IV Pattern Recognition**

**[10 Lectures]**

Recognition and Learning: Human Learning, Machine learning, Recognition by Machines, Overview of pattern recognition, Pattern recognition strategies: Acquisition and representation of patterns, Feature selection, Applications of Pattern recognition.

### **Module V: Pattern Classification and Applications**

**[10 Lectures]**

Decision making: Linear functions and Non-linear separability, Classification models: Distance based classifier, Naïve Bayesian Classifier, Decision Tree, Artificial Neural networks. Applications: Face Recognition, Character Recognition, Watermarking, Solar image Processing.

**COURSE INFORMATION SHEET**

**Course code: IT482**

**Course title: Machine Learning for Machine Vision**

**Pre-requisite(s): CS327 Computer Graphics**

**Co- requisite(s):**

**Credits: L:3 T:1 P:0**

**Class schedule per week: 4**

**Class: B.Tech**

**Semester / Level: IV**

**Branch: B Tech/IT**

**Course Objectives**

This course enables the students:

1.	Be familiar with both the theoretical and practical aspects of computing with images.
2.	Have described the foundation of image formation, measurement, and analysis.
3.	Understand the geometric relationships between 2D images and the 3D world.
4.	Grasp the principles of state-of-the-art deep neural networks

**Course Outcomes**

After the completion of this course, students will be able to:

1.	Develop the practical skills necessary to build computer vision applications.
2.	Explain the exposure to object and scene recognition and categorization from images.
3.	Develop algorithm for classification and clustering.
4.	Discuss the techniques of different models for vision
5.	Apply in different engineering application such Image retrieval, Object detection, etc.

**Syllabus**

**Module 1: Understanding machine learning basics:****[10 Lectures]**

Probability basics: probability, common probability distributions, probability models, normal distributions, Neural Network: Perceptron, Activation functions, Artificial neural network (ANN), CNN. Machine learning for machine vision: learning and inference in vision, modelling complex data densities, regression, and classification models

**Module 2: Models for Geometry****[10 Lectures]**

Pinhole camera, Models for transformations, Multiple cameras, Predictive Models, Descriptive Models, training a Model, Model Representation and Interpretability, Evaluating Performance of a Model

**Module 3: Models For Vision****[10 Lectures]**

Models for shape, style and identity, temporal models, and models for visual words, Generative Models

**Module 4: Models for Image Retrieval****[10 Lectures]**

Understanding visual features, Visualizing activation of deep learning models, Embedding visualization, Model Inference, Content based image retrieval, Autoencoders.

**Module 5: Models for Object Detection****[10 Lectures]**

Object Detection, Detecting objects in an image, Exploring the datasets, ImageNet dataset, PASCAL VOC challenge, COCO object detection challenge, Localizing algorithms, Detecting objects, The YOLO object detection algorithm.

### **COURSE INFORMATION SHEET**

**Course code: CS381**

**Course title: Modern Computer Graphics Lab**

**Pre-requisite(s):**

**Co- requisite(s): CS380 Modern Computer Graphics**

**Credits: L: T:0 P:2**

**Class schedule per week: 4**

**Class: B. Tech**

**Semester / Level: III**

**Branch: CSE/IT**

### **Course Objectives**

This course enables the students to:

1.	Apply Principles Rasterization
2.	Able to use visual computations for geometrical drawings.
3.	Apply principles of Projection techniques
4.	Able to use animation techniques

5.	Construct Virtual images using color and shading techniques
----	---

### Course Outcomes

After the completion of this course, students will be able to :

1.	Build code for demonstration of different rasterization concepts.
2.	Develop different projection techniques.
3.	Develop Object Representation using Curves and Surfaces
4.	Design and build Computer Animation
5.	Write code to Create Visual Effects

### Syllabus

1. Programs based on Graphics Library Functions
2. Programs on Scan Conversion
3. Programs on Filling Algorithms
4. Programs on 2D Clipping
5. Programs on 2D Transformations
6. Programs on 3D Clipping and Viewing
7. Programs on Projection
8. Programs on Curve Design
9. Programs on Surface Design
10. Programs on Multiple Color Generation
11. Programs on Shadow Creation
12. Programs on 3D Model and its Movement
13. Programs on Animation
14. Programs on Science Fiction
15. Programs on Morphing

## **COURSE INFORMATION SHEET**

**Course code: IT481**

**Course title: Visual Processing Lab**

**Pre-requisite(s):**

**Co- requisite(s): IT480 Image Processing and Pattern Recognition**

**Credits: L:0 T:0 P:2**

**Class schedule per week: 4**

**Class: B.Tech**

**Semester / Level: III**

**Branch: B Tech/CSE/IT**

### **Course Objectives**

This course enables the students:

1.	To understand the basic concepts for representation of an image mathematically.
2.	Use foundational techniques of image processing to solve image processing problems of real world application
3.	To understand the basic concepts of classification, clustering and its importance to image processing and pattern recognition.
4.	Use image processing and pattern recognition techniques to detect objects and activities in images.

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Write Code to Explain the process of digital representation of images and the principles of image enhancement and restoration.
2.	Build Code for different techniques employed for the segmentation of images.
3.	Write code to Explain different feature extraction techniques for building pattern recognition applications.
4.	Build code for demonstration of different pattern recognition strategies.
5.	Develop code for solving problems related to pattern classification

### **Syllabus**

1. Programs using the MATLAB editor [Understanding of MATLAB Working Environment]
2. Programs on Digital Image Representation
3. Programs on M Files and Function
4. Programs on Intensity Transformations and Spatial Filtering
5. Programs on Frequency domain Processing
6. Programs on Image Restoration
7. Programs on Image Segmentation
8. Programs on Color Image Processing
9. Programs on Representation and Description
10. Programs on Object Recognition
11. Programs on Learning
12. Programs on Feature Selection
13. Programs on Classification [Application]
14. Programs on Clustering [Application]

## **SPECIALIZATION IV: HIGH PERFORMANCE COMPUTING**

### **COURSE INFORMATION SHEET**

**Course code: CS421**

**Course title: PARALLEL COMPUTING**

**Pre-requisite(s):** CS203 Computer Organization and Architecture, CS206 Design and Analysis of Algorithm

**Co-requisite(s):**

**Credits: L:3 T:1 P:0**

**Class schedule per week: 4**

**Class: B. Tech**

**Semester / Level: IV**

**Branch: CSE/IT**

#### **Course Objectives**

This course enables the students to:

<b>1.</b>	Learn different types of parallelisms achieved over different computer models
<b>2.</b>	Write parallel algorithms (and programs) for computer problems
<b>3.</b>	Map parallel algorithms from architecture to architecture
<b>4.</b>	Identify the issues in concurrency control

#### **Course Outcomes**

After the completion of this course, students will be able to:

<b>1.</b>	Explain the need of concurrent execution of problems
<b>2.</b>	Solve the issues related to concurrency control
<b>3.</b>	Interpret the parallel algorithm from organization to organization
<b>4.</b>	Make familiar with a range of parallel algorithms on different architectures.
<b>5.</b>	Apply the concept parallelism in solving the problems of different domains

#### **SYLLABUS:**

##### **Module I**

Introduction: Parallel Processing Environment- Pipelining and Data Parallelism, Flynn's Taxonomy, Speedup, Scaled Speedup, Analyzing parallel algorithms, P-RAM Algorithms. **(8L)**

##### **Module II**

Processor Array, MIMD: Multiprocessors (shared) and Multi-computers (distributed), Networks(Processor organizations):Static and dynamic Interconnection Networks, Message Transferring procedures. **(8L)**

**Module III**

Mapping and Scheduling, Dynamic Load Balancing on Multi-computers, Static Scheduling on UMA Multiprocessors, Parallel Programming model using process and thread, Deadlock and Synchronization issues. (8L)

**Module IV**

Elementary Parallel Algorithm: Matrix Multiplication: Sequential Matrix Multiplication, Algorithms for Processor Array, Algorithms for Multiprocessors, Algorithms for Multi-computers. (8L)

**Module V**

Solving set of linear equations: Gaussian Elimination, The Jacobi Algorithm, Sorting algorithms: Enumeration Sort, ODD-EVEN Transposition sort, BITONIC Merge, Quicksort Based Algorithms. (8L)

**TEXT BOOK:**

## COURSE INFORMATION SHEET

**Course code:** CS436

**Course title:** HIGH PERFORMANCE COMPUTING ARCHITECTURE

**Pre-requisite(s):** CS203 Computer Organization and Architecture

**Co- requisite(s):**

**Credits:** L:3 T:1 P: 0

**Class schedule per week:** 4

**Class:** B. Tech

**Semester / Level:** IV

**Branch:** CSE/IT

### Course Objectives

This course enables the students:

1.	To understand the basic component of Parallel Computer Models.
2.	To explore the application areas of Parallel Computer.
3.	To understand the idea of Processors and Memory Hierarchy.
4.	To explore the different IR evolution techniques.
5.	To understand the concepts of Multithreaded and Data Flow Architecture.

### Course Outcomes

After the completion of this course, students will be able to :

1.	Discuss different terminologies in High Performance Computer Architecture.
2.	Explain and Implement the concepts of High Performance Computer Architecture
3.	Compare and differentiate the different parallel architectures in terms of various parameters.
4.	Evaluate performance metrics and scalability and selection criteria for parallelism and different parallel systems and able to modify it.
5.	Design effective high-performance systems as per users' criteria with proper justification by self or in a group.

## SYLLABUS

### Module I

**Parallel Computer Models:**The State of Computing, Multiprocessors and Multicomputer, Multifactor and SIMD Computers, PRAM and VLSI Models, Architectural Development Tracks.

**Program and Network Properties:**Conditions for Parallelism, Program Partitioning and Scheduling, Program Flow Mechanism, System Interconnect Architectures. (8L)

### Module II

**Program and Network Properties:**Conditions for Parallelism, Program Partitioning and Scheduling, Program Flow Mechanism, System Interconnect Architectures.

**Principles of Scalable Performance:** Performance Metrics and Measures, Parallel Processing Applications, Speedup Performance Laws, Scalability Analysis and Approaches. (8L)

### Module III

**Processors and Memory Hierarchy:** Advanced Processor Technology, Super Scaler and Vector Processors, Memory Hierarchy Technology, Virtual Memory Technology.

**Bus, Cache, and Shared Memory:** Bus Systems, Cache Memory Organizations, Shared-Memory Organizations, Sequential and Weak Consistency Models, Weak Consistency Models. (8L)

#### Module IV

**Pipelining and Superscalar Techniques:** Linear Pipeline Processors, Non Linear Pipeline Processor, Instruction Pipeline Design, Arithmetic Pipeline Design, Superscalar Pipeline Design

**Multiprocessors and Multicomputers:** Multiprocessor System Interconnects, Cache Coherence Synchronization Mechanism, Three Generations of Multicomputers, Message-Passing Mechanisms. (8L)

#### Module V

**Multi-vector and SIMD Computers:** Vector Processing Principles, Multivector Multiprocessor, Compound Vector Processing, SIMD Computer Organizations, The Connection Machine CM-5

**Scalable, Multithreaded and Data Flow Architecture:** Latency-Hiding Techniques, Principle of Multithreading, Fine-Grain Multicomputers, Scalable and Multithreaded Architectures, Data Flow and Hybrid Architectures. (8L)

#### Text Book:

CO4	CD1, CD3,CD6,CD7
CO5	CD1,CD2,CD3,CD4,CD5,CD7

**Course code: CS493**

**Course title: GPU PROGRAMMING**

**Pre-requisite(s):** CS203 Computer Organization and Architecture, CS211 Operating System, CS201 Data Structures

**Co- requisite(s):** None

**Credits: L: 3 T: 1 P: 0**

**Class schedule per week: 04**

**Class: B. Tech**

**Semester / Level: IV**

**Branch: CSE/IT**

### **Course Objectives**

This course enables the students to:

1.	Identify the different kinds of parallel models used in computing
2.	Identify common programming constructs used in parallel programming.
3.	Understand the basic hardware of GP-GPUs.
4.	Visualize the concepts of grids, blocks and threads in GPU computing.
	Understand the different memory types available in GPU programming.

### **Course Outcomes**

After the completion of this course, students will be able to:

1.	Identify the various components that go into the making of GPUs.
2.	Describe the compute capabilities of a GPU based system.
3.	Formulate logic in multiple dimensions to solve problems using GPUs.
4.	Utilize the various memory modules available in GPU.
5.	Measure the gain in performance between CPUs and GPUs.

## **SYLLABUS**

### **Module I: History of Supercomputing**

Von Neumann Architecture, Basic five stage RISC Pipeline, Cache Memory, Register File, SIMD instructions, GPU architectures - Streaming Multi Processors, Cache Hierarchy, The Graphics Pipeline.

**(8L)**

### **Module II: Understanding Parallelism with GPUs**

Traditional Serial Code, Serial/Parallel Problems, Concurrency, Locality, Types of Parallelism, Task-based parallelism, Data-based parallelism, Flynn's Taxonomy, Some Common Parallel Patterns, Loop-based patterns, Fork/Join pattern,

**(8L)**

### **Module III: CUDA Hardware and CUDA Programming**

CUDA GPU Hardware, Types of data storage, Register Usage, CPUs and GPUs Compute Levels, Characteristics of different compute levels and NVIDIA, Introduction to CUDA programming

**(8L)**

### **Module IV: Grids, Blocks, and Threads**

Multi-dimensional mapping of dataspace, Synchronization. Warp Scheduling, Divergence, Optimization examples : Kernel Fusion, Thread and Block (8L)

### Module V: Memory Handling with CUDA

Shared Memory, Sorting using shared memory, Parallelreduction, Shared memory on different GPUs, Constant memorycaching, Constant memory broadcast, Constant memory updates at runtime, Global Memory,texture reads. OpenCL basics. (8L)

## **COURSE INFORMATION SHEET**

**Course code: CS422**

**Course title: PARALLEL COMPUTING LAB.**

**Pre-requisite(s):**

**Co-requisite(s):**CS421 Parallel Computing

**Credits: L:0 T:0 P:2**

**Class schedule per week: 4**

**Class: B. Tech**

**Semester / Level: IV**

**Branch: CSE/IT**

### **Course Objectives**

This course enables the students to:

1.	To describe benefits and applications of parallel computing.
2.	Explain architectures of multicore CPU, GPUs and HPC clusters, including the key concepts in parallel computer architectures, e.g. shared memory system, distributed system, NUMA and cache coherence, interconnection
3.	Understand principles for parallel and concurrent program design, e.g. decomposition of works, task and data parallelism, processor mapping, mutual exclusion, locks.
4.	write programs that effectively use parallel collections to achieve performance.
5.	To use large scale parallel machines to solve problems as well as discuss the issues related to their construction and use.

### **Course Outcomes**

After the completion of this course, students will be able to:

1	Explain about task and data parallel programs.
2	Build common algorithms in a functional style and solve them in parallel.
3	Analyse a problem, and identify, formulate and use the appropriate computing and engineering requirements for obtaining its solution.
4	Develop parallel programs using OpenMP, CUDA, MPI programming models.
5	Examine analysis and optimization of parallel program.

**SYLLABUS: CS421 Parallel Computing**

### List of Programs as Assignments:

#### 1. Lab Assignment No: 1

Objective: To understand and Implement basic MPI program.

Q1. Write a program that uses MPI and has each MPI process print

'Hello world from process i of n' using the rank in MPI\_COMM\_WORLD for i and the size of MPI\_COMM\_WORLD for n.

Q2. Write a parallel program to print any input message supplied by user.

#### 2. Lab Assignment No: 2

Objective: To Understand and Implement MPI program.

Q1. Write a parallel program to add two one dimensional arrays of size 'n'.

Q2. Write a parallel program to add two matrices of order  $n * n$ .

#### 3. Lab Assignment No: 3

Objective: To Understand and Implement MPI program.

Q1. Write a parallel program to multiply two matrices.

Q2. Write a parallel program to multiply a matrix of order  $n \times n$  by a vector of size n.

#### 4. Lab Assignment No: 4

Objective: To Understand and Implement MPI program.

Q1. Write a parallel Program to count the no. of vowels in a text.

Q2. Write a parallel program to find the largest element of n elements.

#### 5. Lab Assignment No: 5

Objective: To Understand and Implement MPI program.

Q1. Write a parallel program to count no. of characters, words and lines in a file.

Q2. Write a parallel program to find factorial value of an integer.

#### 6. Lab Assignment No: 6

Objective: To Understand and Implement MPI program.

Q1. Write a parallel program to find the transpose of a given Matrix.

Q2. Write a parallel program to implement ring topology.

#### 7. Lab Assignment No: 7

Objective: To Understand and Implement MPI program.

Q1. Write a parallel program to find the largest and the second largest from a list of elements considering minimum no. of comparisons.

Q2. Write a parallel program to sort n elements, using any sorting technique.

#### 8. Lab Assignment No: 8

Objective: To Understand and Implement MPI program.

Q1. Write a parallel program to solve a set of linear equations using gauss elimination method.

Q2. Write a parallel program to find the inverse of a given matrix of  $n \times n$  order.

#### 9. Lab Assignment No: 9

Objective: To Understand and Implement MPI program.

Q1. Write a parallel program to find minimal path (minimal cost) in an undirected graph.

Q2. Write a parallel program to find roots of an equation using N-R method.

### BOOKS RECOMMENDED:

#### TEXT BOOKS

1. Ananth Grama, Anshul Gupta, George Karypis, and Vipin Kumar, Introduction to Parallel Computing (2nd Edition).
2. Edition), PDF, Amazon, cover theory, MPI and OpenMP introduction Recommended: John Cheng,

Max Grossman, and Ty McKercher, Professional CUDA C Programming, 1st Edition 2014.

## REFERENCE BOOKS

## COURSE INFORMATION SHEET

**Course code: CS482**

**Course title: GPU PROGRAMMING LAB.**

**Pre-requisite(s):**

**Co- requisite(s): GPU PROGRAMMING**

**Credits: L:0 T:0 P:2**

**Class schedule per week: 4**

**Class: B. Tech**

**Semester / Level: IV**

**Branch: CSE/IT**

### Course Objectives

This course enables the students to:

1.	Understand hardware limitations having impact on the efficiency of software solutions.
2.	Gain knowledge about the available libraries for programming on GPUs
3.	Learn how to design and implement accelerated programs exploiting the potential of GPUs
4.	Describe importance of the parallel programming on GPUs in the area of general purpose computing.

### Course Outcomes

After the completion of this course, students will be able to:

CO1	Familiarize yourself with the architecture and programming of graphics processing unit
CO2	Describe different parallel processing platforms involved in achieving High Performance Computing.

CO3	Given a problem, develop an efficient parallel algorithm to solve it..
CO4	Implement efficient algorithms for common application kernels, such as matrix multiplication..
CO5	Solve complex real-world problems to achieve maximum efficiency

## Syllabus

### List of Programs as Assignments:

#### Lab Assignment No: 1

Q1. To study the basic commands of Linux.

#### Lab Assignment No: 2

Write CUDA code to compute the squares of the first N integers.

#### Lab Assignment No: 3

- Give an example of two 3 x 3 matrices and show their addition.
- Write code for matrix multiplication using shared memory and compare its performance with CPU code

#### Lab Assignment No: 4

Compute the inclusive and exclusive scan using addition for the following array:

[3 2 0 1 6 5 4 2]

#### Lab Assignment No: 5

Write out each pass, including the final answer, in a parallel reduction using 2x2 blocks to find the sum of any matrix.

#### **Lab. Assignment- 6:**

Write a CUDA program for computing the dot product of a vector in parallel with each row of a matrix. You are required to have each thread access consecutive memory locations (coalescent memory access). The inputs are

- number of rows, number of columns
- a data matrix file
- a vector file (one row)

#### Lab Assignment No: 7

For a matrix of floats, create naive and optimized version of 3 simple operations both on the CPU and GPU:

- Copy
- Matrix Transpose
- Scattered Writes
