## Vice Chancellors Report

Vice Chancellor  
**Professor Indranil Manna**

Birla Institute of Technology, Mesra, Ranchi founded by the philanthropist, industrialist Late Shri B.M. Birla in 1955, attained the status of a Deemed to be University in the year 1986. BIT Mesra is not only one of the oldest Institutes of Technology in the country but also is a pioneer in initiating disciplines like Space Engineering and Rocketry, Remote Sensing, and recently Quantitative Economics and Data Sciences. BIT Mesra was a pioneer in the country to have established the first Science and Technology Entrepreneurship Park in the country, the process of which started in 1974. BIT Mesra has consistently been ranked amongst the leading Technological Universities of the country. The Institute offers academic programs in all major disciplines of Engineering and allied Sciences with over 600 faculty members and over 10,000 students spread across various campuses

covering all three levels of tertiary education.

The Institute has taken many initiatives to enhance the teaching learning process, promote innovation and entrepreneurship activities among the students, build state of the art engineering education infrastructure, and pursue high-end R & D activities through various schemes. It also enforces quality assurance initiatives like academic audits, examination reforms and research reviews conforming to the rules and norms of the regulatory bodies, pre and post accreditation assessments, collaborative initiatives, and ranking and ratings of the Institute.

The global pandemic due to COVID-19 caused a dark spell over the entire world lasting for nearly 2 years. BIT Mesra was no exception. The pandemic nearly brought the entire academic activities of this institute to a grinding halt at least on two occasions during the peaks in Mid-2020 and early 2021. Sheer determination, grit and dedication helped us make variant effort to recover from this threat and resume academic activities in the normal way. By God's grace, BIT Mesra managed to conduct the Spring 2022 in hybrid mode and MO2022 onwards entirely in the usual physical mode. The institution recorded significant rise in admission, conduct of seminars, conferences and various student activities. Placement record touched a new height. A number of important visitors paid us visits on various occasions. The student activities saw a major upward swing and finally, BIT Mesra was on track.

I would now like to take this opportunity to present a brief report of the salient activities of the Institute, undertaken during the academic year 2021-22.

## 7.4 Special Covid Initiatives, if any:

We have recently carried out the research to identify the reasons for Omicron immune evasion. Notable mutations and their effect was characterised that explain the structural basis of antibody efficacy in Delta and a compromised neutralisation effect for the Omicron variant. Our results pave the way for robust vaccine design that can be effective for many variants. Source: Comput. Biol. Med. (2022, Accepted)

## 7.5 Infrastructure Development

In the setting of Cloud Computing Lab at BIT Mesra. There are 2 private clouds, first cloud setup has been done through Aneka where 30 high configuration workstations are connected by using containerization process in lab iii and second cloud is hosted on HPC having server virtualisation. Both the private clouds are interconnected in master-slave configuration. Future plan is to connect these private clouds to public clouds like AMAZON. ### DEPARTMENTAL PROFILE

#### 1.1 About the Department

Department of Production Engineering has been renamed as Production and Industrial Engineering. Since its inception in 1964, the department has been trying to impart quality education to undergraduates and train them to meet the demands of the manufacturing industry. The main objective of production engineering is integration of technology with management in planning and controlling the design, development and operation of manufacturing system. The department offers two courses: B.Tech. in Production Engineering and M.Tech. in Automated Manufacturing Systems. Rapid advances in manufacturing technology, e.g., computer controlled processes and management information systems, ERP and new manufacturing concepts like lean manufacturing, agile manufacturing, sustainable manufacturing etc., are reinforcing the recognition of technological, organizational, economic and human factors. Furthermore, specialized training in manufacturing technology is necessary for industries in India and abroad. Central workshop and laboratories have been established to impart the state of art knowledge to the students in the field of production engineering. number of sophisticated equipment are available in these laboratories/ shops, which not only being utilized for the training of undergraduate and postgraduate students but also utilized for the Research work of the department and giving support to the other research work going in the institute.

Sr. No.	Name of the Inventor	Title of the Invention	Application / Patent No. (As applicable)	Year	Short Description about the patent
1.	Umesh Prasad, Soumitro Chakravarty	IoT enabled tool for online education system in the developing trend of smart education	202211029708	2022	When a student requests a variety of educational materials, the invention can be used to link those materials to a smart education application to fulfil the student's request. In other words, the invention can help fulfil the student's request. This issue needs to be fixed using some kind of technical methodology. Students will now have access to a wide variety of instructional materials, such as video, still images, live broadcasts, and problem banks, as a direct result of this modification. Because of this, a presentation to the general public has been given regarding an intelligent education system. A smart education server that is enabled by the Internet of Things is one of the components of the smart education system. Other components of the smart education system include a student terminal that is preloaded with a learning application, a service that provides a service for learning content such as video clips, images, a live broadcast, and learning materials.
2.	Soumitro Chakravarty, Umesh Prasad	Internet of Things for Home safety Applications	202241032207	2022	The present invention involves a home device interface, a data transfer unit (DTU) equipment, a platform, a control node, and a network server composing an intelligent home program based on Internet of things technology. In comparison to prior art,, the smart household system has the benefit of using Internet of Things technologies to create an intelligent home communications network. In home wireless transmission, a wireless network protocol for a home device is used, and the effects of minimal complexity, self-organization, low energy consumption, and cheap cost are accomplished. Under the assistance of lot technology, the network server is constructed, and effective information from various home components in the system may be transmitted to the network server. Sensing information from the devices canbe transmitted using data from a cloud service network, the gadgets can also be in continuous communication, and consumers can examine what's going on at any time from any location.
